Yeltsin warns of renewed friction with Washington

Europe's Business Newspape

Russian president Boris Yeltsin yesterday forecast new friction between his country and the US after last week's Republican victories in the US mid-term polls. In his first public comment on the elections, Mr Yeltsin predicted a tougher US stand on foreign policy and military issues, saying: "We should acquire contacts with the Republicans to balance our relations." Norway steps up campaign for Yes vote on EU

Brundtland government seeks to quell fears over loss of independence

Norway's Labour government yesterday stepped up its cam-

aign to win approval for joining the European Union in a referendum on November 28, after Sweden's vote in favour of membership on Sunday. With Sweden and Finland now

set to join the Union on January 1, the pro-EU camp is hoping to swing Norwegian opinion to a Yes vote with an appeal not to leave the country isolated. Until now, the opposition has held a strong lead in the opinion polls, reflecting deep-seated suspicions in Norway that membership will erode Oslo's independence and

control over its rich oil and fish

Mrs Gro Harlem Brundtland, prime minister, said: "Norwegians are well aware that Sweden is both our closest and most important neighbour. It's our main trading partner and that bas implications for Norweglan

She underlined the belief on both sides of the campaign in Norway that the outcome will be strongly influenced by the Swedish vote. "Many people waited until the Swedish vote was known before making up their minds, and many more are not likely to decide until the last week or even during the last days before the referendum," Mrs Brundtland said.

The prime minister will have an important platform this week she hosts a regular meeting of her fellow Nordic prime ministers in the northern city of Tromso. Among them, only she and the Icelandic prime minister will be a non-member, or non-Norway is the last to vote of

the four European Free Trade Area applicants, which are aim ing to expand the EU from 12 to members. Austria voted heavily in favour last June.

Yesterday, the Swedish economy won an immediate benefit from the EU vote. Long-term interest rates, in recent months driven up to high levels partly because of uncertainty over the referendum outcome, fell significantly. The krone strengthened and the Stockholm stock exchange rose 2.3 per cent.

In Norway, the Yes campaign plans a big push in the final two weeks, arguing that EU membership will help to secure jobs at a

warning that investment, produc-tion and jobs would be moved outside the country if it is

"It would be a nightmare for Norwegian companies should we decide to stay outside the

Biggest of recent German healthcare deals

BASF buys Boots prescription drug arm for \$1.4bn

By Daniel Green in London and Christopher Parkes in Frankfurt

BASF, the German chemicals manufacturer, took its biggest step yet into the pharmaceuticals industry yesterday by agreeing to pay "about £850m" (\$1.4bn) for the prescription drugs arm of

The proposed deal, still subject to detailed contract discussions, would be BASF's third in two

The pace of dealmaking indicates a determined - if belated effort to improve the performance of Knoll, BASF's drugs division. Knoll has annual sales of only DM2bn and fell into loss last year, compared with Bayer's drugs business, which contrib-utes about two thirds of group profits from annual sales of DM8bn (\$5.3bn).

BASF said vesterday the rationale for the Boots acquisition was "both therapeutic and geographic". Boots is strong in the US, UK and Commonmwealth countries while BASF has most of its business in continental

BASF also wants Boots' expertise in nervous-system drugs. Boots has licences to develop two launch dates at the end of the decade. Until then, BASF will have to make do with an old and

small product portfolio. In the first half of 1994, Boots achieved prescription drugs sales of £226m and pre-tax profits of £49.8m. Spending on research and development was £33m.

Most of Boots's prescription drug sales and profits come from Synthroid, a thyroid drug avail-

..Page 18 Boots drugs sale Page 28بـــ

able only in the US. The drug had first-half sales of \$117m - outside the world's top 100 best sellers. Synthroid, like all other significant Boots products, has no patent protection.

Older drugs have been a central theme of BASF's deals recently. Last month it bought rights to 80 out-of-patent generic drugs from Hexal Pharma and signed a deal with Ivax, the second-biggest generics company in the US, to distribute drugs in

In global terms, the Boots deal is small. BASF's Pharma division has annual sales of DM2bn. With such drugs, with projected the Boots operation, BASF would

move from about 40th biggest in the world in terms of drugs sales to about 30th.

The acquisition would nevertheless be the biggest of the recent forays into healthcare by German chemicals companies. In March, Bayer spent \$180m

on a 28.3 per cent stake in Schein, a privately owned US group. That followed last year's \$546m purchase by Hoechst of a 51 per cent stake in Copley Pharmaceuticals, another US com-

pany.

For Boots, the proposed deal ends months of speculation over: Boots's intentions. The company put its prescription drugs business up for sale when adverse side-effects of its most promising drug, the heart treatment Manoplax, forced it in July 1998 to abandon its development.

Yesterday's decision commits the UK company to developing as a retailer, after it has spent most of its 140-year history trying to combine healthcare with shop-BASE heat several rivals to the

deal, including a management buy-out team. Other companies that had been in talks with Boots included Zeneca and Medeva of the UK, but no agreement was

President Bill Clinton, in Indonesia for the Apec leaders conference, talks to Japanese prime minister Tomilchi Murayama during a walk in the garden of the US ambassador's residence in Jakarta yesterday

Clinton rallies support for deal on N Korea

By Peter Montagnon in Jakarts

US president Bill Clinton is using the Asia-Pacific Economic Co-operation forum to drum up support for his nuclear deal with North Korea.

Speaking after meetings with leaders from China, Japan, South Korea and Australia, he said the North Korean accord had been the most important topic of their

All had indicated support for the agreement, "which marks a historic step to freeze, and ultimately to end, the greatest secu-rity threat in this region".

Under the deal, Pyongyang has undertaken to abandon efforts to manufacture and stockpile nuclear weapons.

An explicit-gesture of support for it would help to rebuild the credibility of US foreign policy after the landslide Republican victory in last week's mid-term elections, and would go some way to distract attention from the persistent intrusion of human rights issues into a summit that was supposed to be primarily devoted to trade policy.

It may also help to persuade North Korea to live up to its undertakings. The deal has proved controversial in the west because it will be difficult to police and enforce. It will be five years before

Dublin faces break-up

By John Murray Brown in Dublin and David Owen

The survival of Ireland's Fianna Fail-led coalition government was under increasing threat last night, throwing fresh doubt over the future pace of the Northern freland peace process.

As Mr John Major, the UK prime minister, was outlining proposals to bring Ulster's loyalist groups into the talks process in a speech at the Lord Mayor's banquet, Mr Albert Reynolds, his Irish counterpart, was preparing for today's parliamentary showdown with his Labour party

The crisis, centred on Labour allegations of government mis-handling of an extradition case involving a paedophile Roman Catholic priest, looks certain to end the 22-month coalition.

Mr Reynolds was in consultation with his Fianna Fail ministers yesterday. If the crisis is unresolved and Mr Reynolds loses a vote of no confidence he could seek the permission of Mrs Mary Robinson, the Irish president, to dissolve parliament, and call early elections.

Alternatively, and some politi-cal observers believed this more likely yesterday, Mrs Robinson could ask the opposition parties

Coalition in TRW finds partner for telecoms venture

By Alan Cane in London

The race to establish the first global satellite system for mobile phones intensified yesterday as TRW, the large US-based aerospace manufacturer, announced an equity partner for its \$2bn Odvssey project.

It said that Teleglobe, a Canadian provider of intercontinental telecommunications services, had agreed to take part in a joint venture designed to put the satellite system in orbit for the start of operations in 1998. The aim is to build a network

of communications satellites able to provide personal voice, fax and naging services to subscribers anywhere in the world. Customers will use a pocket telephone similar to existing cellular phones. The service is likely to find its greatest use in remote areas with little telecoms infrastructure.

The Odyssey project, planned for four years, will compete with several similar ventures. These include Iridium, in which the main partner is Motorola, the US electronics company; Globalstar, which is being developed by Loral, the US defence group; and a system planned by an affiliate

\$3.4bn, while Globalstar will require an investment of \$1.8bn. To meet the estimated \$2bn cost of Odyssey, \$1bn is expected to be raised through debt. Of the

rest, TRW, which had revenues of \$7.9bn last year, is providing \$100m and Teleglobe, with 1993 revenues of C\$1.4bn, \$50m. The balance is expected to be found from equity partners both strategic - such as telecoms operators and financial

Mr Charles Sirois, chairman and chief executive of Telegiobe, said yesterday that Odyssey would essentially operate as a wholesaler of personal telecoms capacity. It would market its services through local distributors which might be strategic partners in the venture.

He said Odyssey had advantages over competing systems. Odyssey's satellites would be in medium orbit - about 6,000 miles above the earth - enabling it to cover the globe with only 12 sat-ellites. Iridium, which he saw as the most serious rival, required 66 small satellites in low orbit. Mr Sirois thought calls over Odyssey would cost \$1 a minute

compared with an estimated \$3 for Iridium. TRW has applied to the US Federal Communications Com-

mission for a licence to operate the Odyssey system. The FCC is expected to make its decision in

of Inmarsat, which provides mobile communications services to maritime and aeronautical Continued on Page 18 Iridium is expected to cost CONTENTS

WEU pledge on Bosnian arms embargo

By Bruce Clark in Noordwijk, the Netherlands

European allies of the US pledged yesterday to maintain the arms embargo against Bosnia, despite Washington's abrupt withdrawal from the operation, which they almost unanimously regretted.

The nine full members of the Western European Union - a defence club which is emerging as the European pillar of Nato - also agreed on the need to solve the Bosnian war by peaceful means, including the efforts of the "contact group" of senior officials from five nations. The contact group, whose credibility has been battered in recent days, will meet

in London on Thursday. Several WEU countries deplored the US position on grounds that it implied support for a military solution in Bosnia. Turkey - an associate member of the WEU - was alone in voicing approval for President Bill Clinton's move last week, which took his allies

Dutch seaside town of nine WEU nations and 15 other countries - nine of them excommunist - which enjoy an associate or observer status. Mr Willy Claes, the Belgian

politician who has just taken over as secretary-general of Nato, will fly to the US this week with a warning that transatlantic differences could scupper any efforts by the west to provide security and stability for ex-communist countries. On both sides of the Atlantic, we must avoid decisions which can endanger solidar-

ity," Mr Claes said. Mr Claes added that Nato would continue to enforce the because it had been mandated to do so by the United Nations. His implied criticism of the move, forced on the US president by Congress, marked one of the few occasions in Nato history when the holder of the top job in the alliance has censured Nato's most powerful

member state. The WEU gave broad

Nato chief Willy Claes (left) talking to WEU secretary-general Wim van Eekelen at a meeting in Noorwijk, the Netherlands Roote

paper on upgrading defence co-operation in Europe but lively discussion over Bosnia left less time than expected to discuss the proposal, which Britain has reservations over. However, UK officials confirmed that they were softening their traditionally sceptical attitude to purely European security initiatives by cautiously approving a Franco-German move to set up a joint

armaments agency, as long as

it was open to all WEU members and efficiently managed. ■ Croatia yesterday threatened to intervene if Bihac, the north-western Moslem enclave. was in danger of falling to Serb forces, writes Laura Silber in Belgrade. At the same time, the Bosnian Serbs kept up their assault on Bihac. Serb forces have recovered 80 per cent of the land seized by Moslems during their two-week offensive there, the UN said.

Milosevic puts more pressure on the media

President Slobodan Milosevic of Serbia is threatening to ban the last independent newspaper in Belgrade, its editors said

The move comes at a time when the Serbian economy appears in danger of collapse and the president is facing criticism within his own party and the country for his embargo against the Bosnian Serbs. But also it appears to reflect his renewed confidence after being courted by the international community as the man willing to make peace in Bosnia.

Last week, Mr Ivica Dacic, spokesman for Serbia's ruling socialists, criticised Borba, the independent Belgrade daily, as an "anti-state" newspaper. Government lawyers invoked a legal technicality, saying the newspaper was not legally registered, and therefore, does not exist. Borba's editors dismissed this charge as "nonsense" printing their three-year-old

registration petition. Mr Branislav Milosevic, managing director of Borba, yesterday said the Serbian president

whatever he likes in Serbia after being hired as a peace-

Since imposing a political and economic embargo on the Bosnian Serbs three months ago, the Serbian president has sacked the editor of Politika television. The Politika daily newspaper, once the flagship of Serbian journalism, has become a government mouth-piece. Studio B, the financially strapped independent broadcaster, is also threatened by a government-orchestrated

No relation to the president, Mr Milosevic of Borba says the move may be a pre-emptive strike against potential dissent in Serbia. Economic deprivations have risen. The Yugoslav dinar, stable for nearly a year, is crumbling. Despite severe penalties, a black market has re-emerged. Electricity has been restricted and shortages of staple foods are frequent.

Mr Milosevic may also come under increasing pressure to review his policy on the Bos-nian Serbs if they continue to suffer military setbacks.

French funding probe widens

The third French government minister to resign in recent weeks amid allegations of corruption was formally placed under investigation by the French authorities yesterday. Mr Michel Roussin, the co-operation minister who resigned over the weekend, was questioned yesterday afternoon for two hours by Mr Eric Halphen, investigating magistrate in Creich outside Paris.

The minister, who has since been replaced in the French cabinet by Mr Bernard Debré, is under investigation for alleged improper receipt of corporate funds in connection with the funding of the Gaullist RPR. He denies any wrongdoing. Meanwhile, further allegations of the links between French companies and political parties emerged yesterday with a report in Le Monde connecting Alcafel Alsthom, the telecommunications group, with the Republican party, which is a member of Mr Valery Giscard d'Estaing's Union for French Democracy (UDF), which governs in coalition with the RPR. Shares dipped temporarily on the Paris bourse after Le Monde carried an article suggesting that one of the company's subsidiaries had paid FFr3.2m (£380m) to the Republican party to support its 1988 political campaign. The article claimed the money was paid into a bank account in Luxembourg controlled by a Panamanian company used as a slush fund for the Republican party and created by Mr Alsin Crellier, now managing director of Nomura Bank in Paris and an associate of Mr Gérard Longuet, the former industry minister forced to resign over Republican party funding investigations. Alcatel Alsthum refused to comment yesterday. Mr Crellier said Thave nothing to say. I am talking to my lawyers." Andrew Jock, Paris

Patronat chooses new leader

Mr Jean Gandols, the former head of Pechiney, the stateowned aluminium and packaging group, is set to become the next president of the Patronat, the French employers' federation, after winning a clear majority in a vote by the organisation's executive council. Mr Jean-Louis Giral, the other candidate in the contest, said he would withdraw following his 25-10 defeat in yesterday's poll. Mr Gandois should now be con-firmed as the next head of the Patronat at a meeting of the organisation's 536-member general assembly which is sched-uled for December 13. The contest has been one of the most fiercely fought of recent years. Mr Gandois, a pro-European. has said he wants to revitalise the organisation and give it a stronger voice in the debate over political and social reforms. Mr Giral, head of the family-run building contractor Desquenne et Giral, was regarded as the champion of small and medium-sized industry. He is close to Mr Jacques Chirac, the Gaullist candidate for next spring's presidential elections.

Italian coalition to back vote

Italy's right-wing coalition government last night looked set to remain together in voting on a self-imposed confidence motion on part of the 1995 budget. The confidence motion had been introduced in the chamber of deputies where the coalition has a majority of 120 to ensure that the populist Northern League of Mr Umberto Bossi did not defect from the government's ranks. But as the debate began, a League spokesman told the chamber his party would back its partners even though it disliked the imposition of the confidence motion. The govern-ment's move related to the introduction of a pardon on buildings built without proper planning permission. The pardon is expected to lead to a huge influx of new property registration fees to the tune of L7,000bn (\$4.5bn). But members of the government coalition, mostly the League, proposed almost 200 amendments. The opposition also proposed others to limit the scope and prevent a blanket approval for Illicit construction over the past five years. Government business managers argued that only by a confidence motion could discussion be speeded up. Robert Gruham, Rome

Hungarian growth speeds up

A rapid growth in exports and high investment is pushing the Hungarian economy towards an unexpectedly high 4 per cent growth in gross domestic product this year. But sustainable growth will remain elusive unless the government cuts spendig and tightens fiscal policy, Mr Peter Akos Bod, governor of Hungary's independent central bank, said yesterday. Addressing an FT conference on Investing in Hungary, Mr Bod said industrial output was now growing at 7 per cent annually while construction was booming, with 15 per cent growth. After two years of drought-stricken harvests and a disruptive transition to private land ownership, agricultural output which usually accounts for one third of total exports, is also expected to rise by 5 per cent this year. The growth is export and investment led, Mr Bod said. Recovery in the German and other EU markets is the main force behind an expected 18 to 20 per cent rise in export volumes this year. This is helping to balance a similar growth in imports of machinery and components. Virginia Marsh and Anthony Robinson, Budapest

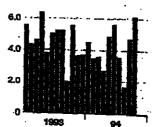

Lower Saxony N-waste accord

The German state of Lower Saxony, bowing to pressure from the federal government, has approved the first shipment of nuclear waste to a medium-term storage facility in the northern city of Gorleben. The federal environment minister, Mr Klaus Töpfer, forced the state's hand with an administrative order. The Lower Saxony environment minister, Mrs Monika Griefahn, said her approval was conditional on removal of the waste within seven years and insisted that the facility should pose no health risks for people who live in the area. She also said waste storage facilities should be built up at nuclear reactors themselves, and that Gorleben would accept no nuclear waste that had been reprocessed outside Germany. The first shipment of waste, from a reactor in southern Germany, could take place on November 24. The transport is likely to involve one of the largest police actions in post-war German history. An estimated 4,500 police will be deployed in Lower Saxony alone to protect the shipment, and thousands more police will be on the 500km route. Reuter, Hanover

ECONOMIC WATCH

Norway's trade surplus rises

Norway's trade balance Visible balance, excluding and oil platforms (NKr bri)

October rose to NKr6.143bn (£600m) compared with NKr5.523bn in the same month a year earlier, said Statistics Norway, the official statistical agency. The increase was largely due to a surge in exports of goods such as fish, fish products and metals, said the agency. Total exports, which include Norway's substantial oil and gas exports, rose by 16 per cent in October NKr22.888bn compared with NKr19.757bn for the month a year earlier. Total imports in October rose 18 per cent from

Mr Kohl would be re-elected as Chirac's referendum call countered

By David Buchan in Paris

France should hold a referendum on any treaty changes resulting from the European Union's planned 1996 constitutional conference, rather than on the final move to economic and monetary union already enshrined in the Maastricht pact, Mr Alain Lamassoure, KÜ affairs minister, said

yesterday. He was reacting to the call with which Mr Jacques Chirac recently opened his presidential campaign for France to hold a second referendum on adopting a single currency, in addition to its 1992 plebiscite approving Maastricht.

The issue of a single currency "is already settled", Mr Lamassoure told French radio. But Mr Chirac's Emu

referendum call, clearly designed to give fresh hope to the anti-Maastricht camp unreconciled to its narrow defeat two years ago, unsettled the financial markets and called down criticism from the Balladur government's more pro-European ministers on Mr Chirac's

Mr Lamassoure's remarks were carefully co-ordinated with Mr Alain Juppé, the foreign minister who is also Mr Chirac's main backer within the government and who on Saturday succeeded him as interim president of the Gaullist RPR party. Their initiative is designed to get the French government off the hook on which Mr Chirac's Emp referendum idea threatened to impale it as well as

France's presidency of the EU in the first half of next year hard enough without France appearing to cast doubt on its existing Maastricht commitment through the mouth of Mr Chirac. But, said Mr Lamassoure, the challenge of enlarging the EU to the east, as well as improving its foreign and defence policy co-ordination, would almost certainly give rise to institutional changes in 1996 meriting a

referendum. Mr Lamassoure fully acknowledged yesterday that the French presidential campaign "unquestionably poses us a problem" in the smooth chairing of Union business. France will begin its KU presidency under one president and finish it under another. Another certainty is a new government after the May 7 election.

This means that June 1995 ~ which would otherwise be the busiest month of the France's EU presidency as it scrambles to chalk up new directives to its credit - will see new French faces chairing most or all of the various Union councils.

Meanwhile, Mr Jacques Delors, outgoing European Commission president, yesterday appeared to reduce by a month the suspense over whether he will run as Socialist candidate for the presidency. He said on radio that if he decided not to run, he would say so "before Christmas", to give the Socialists time to find another champion. It seems, therefore, that the nearer his silence is maintained to January 25 - the new likely date for installation of the new Commission the likelier it is that he will run.

Industry hails Swedish vote on EU entry

By Christopher Brown-Humes in Stockholm

The Swedish krona rose sharply yesterday in response to Sunday's referendum vote backing entry to the European Union. But though the increase might have damaged the earnings prospects of the country's big export-oriented multinationals, business leaders did not mind in the least.

The clear endorsement of EU membership was exactly what they wanted - even though a weaker currency might have benefited them in the short term. "It is the long term which is important," said Mr Sören Gyll, chief executive of Volvo, Sweden's biggest industrial group. Mr Magnus Lemmel, head of the Federation of Swedish Industries, said: "We can now begin our way back to our lost position at the top of the world's industrial coun-

Sweden's current economic recovery, after three years of recession, has been driven by the success of its exporters. It was not surprising, therefore, that the importance of EU membership for its big companies was highlighted repeatedly during the referendum

The bosses of the country's multinationals stressed that they had to be able to operate under the same conditions as their competitors, as well as to influence the outcome of decisions affecting the business climate in Europe - by far their largest market.

"Sweden's entire wellbeing stands or falls on its nearness

Europe," said Mr Leif Johans-son, president of Electrolux, the world's biggest manufac-turer of household appliances. Membership was particularly important for the pulp and paper sector, Sweden's largest net export earning industry Ever since Finland voted last month in favour of EU entry, Swedish forestry executives

were worried they would lose

out to their main European

competitor if they were left

outside the Union. Equally, they wanted to be able to influence directives coming out of Brussels, partic ularly where - as in the case of waste paper recycling - there is a direct impact on the amount of Swedish virgin fibre going into the paper system.

A further reason for business to back membership was the belief that EU monetary convergence criteria would force the government to be more disciplined in reducing the country's large budget deficit and fast-growing debt. They believe tougher government action will bring down interest rates, stimulating investment and creating jobs.

Yesterday brought a glimpse of this brighter future. Long-term interest rates fell sharply, with the yield on the five-year benchmark bond dropping 19 basis points to 10.35. The stock market also celebrated, rising 2.34 per cent. A climate of greater investor confidence in Sweden should

bring both increased domestic investment and a spurt in much-needed foreign invest-

Berlusconi faces huge aid bill for flood damage

By Robert Graham in Rome

The Berlusconi government is searching for ways to find tional aid to cover the damage caused by last week's catastrophic flooding in northern

As an immediate response. the right-wing coalition pledged L3,000bn drawn from existing funds. But the final ment of flood damage in Piedmont is expected this week and initial estimates of more than L10.000bn worth of dam-

age could prove conservative. With very limited personal and corporate insurance cover, especially in the agricultural sector, among the worst affected, individuals, companies and local authorities are looking to the government for financial help.

Mr Roberto Maroni, the interior minister who has taken charge of the relief operation, has done nothing to dispel the impression that the government will foot the bill. Indeed, the government seems more than ready to do this to offset growing criticism over the authorities' handling of the

The cost of previous disasters, such as the 1980 Irpinia earthquake in southern Italy. were financed by increasing taxes on petrol or tobacco. But this could prove inflationary and the government may well opt to issue a special bond or introduce a once-off income tax

More than 700 towns and villages were hit by the floods which began on November 5 in the tributaries of the River Po.

Many are still without fresh water supplies although minimal road communications have been restored throughout Piedhalf of the 10,000 people displaced by the floods to return to their homes.

As the clearing-up operation continues, attention has shifted to establishing how the authorities were caught seemingly unawares by the floods. Magistrates in Turin, Alessandria and Asti have opened separate investigations; and Mr Mario Palmieri, the prefect of Asti, is being investigated for culpable homicide for his failure to prevent death from the

At the same time magistrates are looking into the activities and management of Italy's civil protection agency, which is in charge of prevent-ing natural disasters. The magistrates are trying in

particular to establish why a fax sent at 16.30 on Thursday November 3 from the Piedmont service for the prevention of environmental risks was ignored. This fax was marked urgent, warned that exceptionally heavy rainfall was forecast for Saturday November 5 and accurately identified the areas

The warning was sent to the regional authorities, but was either ignored or played down. In one instance it was buried under a pile of letters for five days. It is even more remarkable that in spite of the fact that the floods took more than 24 hours to reach populated centres such as Asti and Alessandria, none of the big towns

But little new money has come in to date. Official requests for IMF support have so far been met with polite refusal. Financial institutions are cautious about lending to a country with an external debt approaching \$11bn and one collapsed peace agreement behind

The disaster of the last accords stirred up new mistrust. Early disarmament and large cuts in defence spending are unlikely as long as there is any chance that war will erupt

~ CONGO

ANGOLA

If peace holds, foreigners seeking to invest in Angola's non-mineral economy stand to be frustrated not just by continued political uncertainty but also by bureaucracy, an under-educated workforce and confused property laws.

But three sectors of the official economy could grow if a ceasefire holds.

First, despite an estimated 10m to 20m landmines scattered across the country, refugees could return to their fields in many parts of the country and April's harvests could increase sharply from an estimated 250,000 tonnes this year. Long-term agricultural potential is large: before independence Angola exported

food and was the world's fourth largest coffee producer. were to hold and Unita, which has been funding its war effort mostly with diamond sales, were persuaded to co-operate in the anarchic north-eastern diamond areas, the govern-ment could raise official pro-

duction from \$2m last year closer to the \$250m reckoned to have leaked out from the Unita Third, Angola's mostly off-shore oil industry has largely been unaffected by fighting. Oil production is expected to rise gently from around 550,000 barrels a day to 700,000 in

1996, as new fields come on But Pedro Manuel, an Angolan businessman, echoed a widely held caution about his country's prospects. "There is so much hatred after what happened last time. A ceasefire may happen but that is not the same as peace."

INTERNATIONAL NEWS DIGEST

Bandaranaike named as PM

Mrs Chandrika Kumaratunga, Sri Lanka's new president yesterday appointed her mother to a third term as prime minister, but made few other changes in the cabinet for the sake of continuity. Mrs Kumaratunga, who won a sweeping victory in last week's presidential polls, swore in the elderly Mrs Sirima Bandaranaike along with other cabinet ministers keeping alive a family tradition of ruling the island nation. Mrs Bandaranaike, 78, was the world's first woman to head a national government when she became Sri Lanka's prime minister after her husband Solomon Bandaranaike was assassinated in 1969. She served two terms as prime minister in the 1960s and 1970s and was leader of the Sri Lanka Freedom party formed by her assassinated husband.

Mrs Kumaratunga kept the finance portfolio and took over the defence ministry, a portfolio which under the constitution resides with the executive president along with the post of commander-in-chief of the armed forces.

Political analysts said Mrs Kumaratunga's decision to nomi nate her mother as prime minister would enable them to swan roles easily after the new government met its election pledge to make the presidency a ceremonial position. Reuter, Colombo

Bhutto offers peace to rivals

Pakistani Prime Minister Ren azir Bhutto yesterday offered to make peace with her politi-cal opponents after the opposition tried to shout down President Farooq Leghari (pictured left) during the opening of parliament. Mr Leghari's 45-minute speech to an annual joint session of the two-chamber parliament in Islamahad was barely audible amid the non-stop chants of "Go Leghari, go". Excited deputies pushed, shoved and hurled insults at one another as members of Ms. Bhutto's Pakistan People's party (PPP) around her. PPP deputies

Verhaul

lined up on the speaker's dais to keep their banner-waving ents at bay. Bhutto supporters later punched two opposi tion deputies and witnesses said one of them was bleeding from the mouth.

We have always extended the hand of friendship to them. Ms Bhutto told reporters later when asked about the chances of a dialogue with opposition parties. "Even now the government is willing to talk to them on issues of national interes she said. The incident followed the arrest on Sunday of Mr Mohammed Sharif, the father of opposition leader Mr Nawaz Sharif, on charges of obtaining loans fraudulently from foreign banks. Reuter, Islamabad

Hunger worsening in Africa

Hunger and malnutrition are growing in eastern Africa and the continent needs exceptional aid, according to a report to be presented to a council meeting of the United Nations Food and Agriculture Organisation (FAO) today. Mr Jacques Diouf, who promised to make Africa his priority when elected head of the UN's main food agency last year, will detail a worsening hunger situation when he opens the meeting, "Fifteen countries in the region are currently facing exceptional food emergencies and half of these countries are also being affected by civil strife," the report said. Rwanda and Burundi were listed as being extreme cases, and in need of continued international aid and "extreme agricultural rehabilitation". The report also said famine conditions were emerging in

everal parts of the Horn of Africa including Ethiopia, Britrea. Kenya, Somalia and Sudan.

Mr Diouf, a Senegalese who is the FAO's first African director-general, will address a 49-nation governing council, which is meeting for 10 days to discuss and vote on a range of agency business. Reuter. Rome

Switzerland to aid Kyrgyzstan

Switzerland said yesterday it would provide technical and financial aid to the former Soviet republic of Kyrgyzstan under a new co-operation agreement. A finance ministry spokesman said Swiss ident Otto Stich (pictured left) and Mr Askar Akayev, his Kyrgyz counterpart, who arrived with a delegation in Switzerland for a three-day official visit, signed the deal in the capital Berne. Switzerland will provide SFr4m (£1.95m) of technical aid a year, covering agriculture, forestry, the dairy industry,

privatisation, and help to non-governmental organisations. It will also provide financial assistance for energy and health-care projects. The two countries have had links since Switzerland joined the International Monetary Fund and World Bank in May 1992. Kyrgyzstan was one of several former Soviet republics which joined Poland in a group that then let Switzerland represent it on the IMF's executive board. Reuter, Berne

China plans sweeping reforms of its welfare system to provide a social security net for urban employees, many of whose jobs are under threat in ailing state

The official Xinhua news agency yesterday reported that next year "top priority" would be given to building a better insurance system for unemployment, pensions and medi-

China's plans to overhaul its existing rudimentary social security system reflects growing concern about the effects of changes that have all but wiped out the previous cradleto-grave welfare arrangements based on individual work

Municipalities such as Shanghai have been experimenting with new social security measures for the past year or so, but Beijing has clearly decided that political pressures oblige it to overhaul its existing schemes

Plans to construct a comprehensive social security net for China's approximately 100m urban workers come in response to strong pressures from increasing numbers of unemployed and underemployed workers.

China's official urban unemployment stands at 2.6 per cent, but this figure vastly understates the problem. Numbers of jobless in some industrial cities may be as high as 20 per cent of the workforce.

Under the proposed new scheme all enterprises, including state-owned, collective, joint venture and private ones, will have to take out unemployment insurance at a cost of 1 per cent of pay-roll. This money will be paid into a nationally administered fund.

The government is also planning to establish new superannuation and medical care arrangements for pensioners. This move reflects official concern over the fate of many pensioners buffeted by rising

The -- authorities - also announced they would set up a special insurance fund for people laid off from bankrupt enterprises and enterprises undergoing reorganisation.

its state enterprises, includi: liquidation of the worst cases, its main priority, but has hesitated to implement its plans because of fears of worker

The establishment of a new system is an attempt to put in place social security arrangements for the long term. But China faces technical difficulties establishing such comprehensive schemes. New welfare arrangements are expected to be a drain on the budget as China proceeds with a painful rationalisation of its state sector where an estimated 50 per cent of enterprises are losing

• China has completed a draft law to cover safety in its nuclear power industry and expects the legislation to be ratified soon by its parliament, the National People's Congress, the official People's Daily said yesterday, Reuter

adds from Beijing.

The Nuclear Safety Department, responsible for drafting the law, has already announced 16 regulations governing nuclear safety and issued 60 documents to serve as guidelines for nuclear safety, the newspaper said. Nineteen more regulations on nuclear safety are still being drafted. "This will enable administration of our nuclear safety to come on track through a law," the newspaper

China's fledgling nuclear industry has never reported an accident or polluted the environment, it said. China plans to have 10,000 MW of nuclear generating capacity opera-tional or under construction by the year 2001.

Taiwanese vote to settle their island's identity

Laura Tyson reports on divisions over whether Taiwan will seek to be a Chinese province or a sovereign state

aiwanese voters will cast a ballot for the island's identity as much as for cleaner streets in local elections early next month.

The long-ruling Nationalist party.

or Kuomintang (KMT), is marshalling all the considerable forces at its disposal to maintain control of the two biggest cities and a governor-ship on the island it officially calls a province of China - the Republic of China, that is, not the People's Republic of China.

The KMT, which retreated to Taiwan in 1949 after defeat at the hands of Mao Zedong's communist armies, now faces a formidable chal-lenge to its political survival in the shape of the Democratic Progressive party, which advocates an indepen-dent Taiwan. It also suffered from attrition when disaffected conserva-

tive KMT members broke away to form the New Party last year. ing in direct presidential elections in expected to go to Mr Chen Shui-bian, a popular DPP lawmaker in

Ironically, old foes have become allies as the Nationalists have been aided in their electoral campaign by Chinese officials, who have in recent days reiterated Beijing's longstanding threat to use force against Taiwan should circumstances warrant. President Jiang Zemin vester-day reportedly told US President Bill Clinton at the Asia-Pacific Economic Co-operation forum in Jakarta that if Taiwanese authorities declare independence. China would certainly not stand by and do nothing.

Next month's polls represent the penultimate stage in a process of democratisation which began in the mid-1980s, marked by successive elections starting from the lowest levels of government and culminat-

In the December 3 elections voters will for the first time choose mayors for the cities of Taipei and Kaohslung, where about a quarter of Taiwan's 21m residents live, and a governor for Taiwan province, comprised of territory other than the two cities and a few outlying islands. The posts were previously appointed.

Should a DPP candidate win. it would be the first time the leading opposition party would have captured a significant administrative post. The KMT accuses the DPP of being irresponsible and incapable of governing, while the DPP says the ruling party is irredeemably corrupt

The Taipei mayoral seat is widely

Taiwan's Legislative Yuan, or parliament. Mr Wu Dun-yih, the KMT incumbent, is seen likely to retain

the mayorship of Kaohsiung. But it is the symbolically significant post of provincial governor which is especially critical to the KMT, and it has spared no expense in drawing on its vast financial resources to ensure victory for the incumbent candidate, Mr James Soong. Mr Soong is one of the few remaining top Taiwanese politicians to have been born in mainland China, the others having been shunted out of the KMT's mainstream faction in recent years.

The KMT cannot afford to lose the provincial governorship poll because it is seen as referendum on the iden-

tity of Taiwan and future of relations with China. The KMT says Taiwan is a province of China and supports eventual reunification with China under condition of peace and democracy on both sides of Taiwan Strait. The DPP says Taiwan is not a Chinese province but an independent nation and thus the entire provincial government structure is redundant and should be abolished.

The KMT also fears that if the DPP wins control of the provincial government, which administers three-quarters of the island's territory and population, something analogous to the "Yeltsin effect" could materialise, at least in theory - a reference to how the power of the head of the Russian republic eclipsed that of the leader of the

Political analysts say that a win by the DPP's candidate. Mr Chen Ting-nan, would pose an indirect threat to the legitimacy of the president himself, as he was in effect installed by a rubber-stamp parlia-ment rather than popular mandate.

In practice, President Lee Teng-hui enjoys enormous popular support, even among many DPP members, because he is a native Taiwanese and it is widely believed that he secretly favours the island's independence. As the polling day draws nearer, the KMT will likely play the "president card", in the parlance of the local media, and bring Mr Lee on an extensive tour of the island to win votes. The same strategy helped carry the KMT to victory in islandwide polls year ago which the DPP

Junichiro Koizumi: recipe for dramatic change

Bold campaigner for reform in Japan

Michiyo Nakamoto on a call for privatisation of the country's postal ministry

n Japan's much touted and fiscal reform is small govdrive to reform its bloated bureaucracy, one force that has been woefully absent is clear leadership from the country's politicians.

In spite of all the talk by the authorities, the pace of reform to date has been slow and the steps taken or being proposed have been half-hearted and superficial.

As Japanese industry, and the US government, become more vocal in pressing for fur ther deregulation, Mr Junichiro Kolzumi, an eighth-term member of the House of Representatives and former minister of posts and telecommunications, has emerged as a rare politician with a recipe for dramatic change.
The soft-spoken Mr Koizumi

has ruffled many feathers in the Japanese political and bureaucratic community by calling for the break-up of the postal ministry as the key to reducing the role of government in the country's affairs

"The best way to tackle the issue of administrative reform to privatise activities of the postal minis-

ernment. I believe that means that what private business can do should be left to the private sector and the government's role should be restricted to a small number of essential functions.

In that respect the postal ministry is clearly a leading candidate for reform because so many of its businesses are easily transferred to the private sector. Mr Koizumi says.

Japan's ministry of posts and telecommunications, apart from being responsible for delivering the nation's mail. runs the largest savings system and the largest insurance company in the world. Deposits in postal savings accounts as of March, 1994 amounted to Y183.535bn (£74.28hn) while the assets of the postal insurance fund totalled Y74,345bn.

The postal ministry thus competes not only with private delivery services but with private banks and insurance companies as well. Putting the postal ministry's businesses into private hands would reduce the role of government in economic affairs and could try." Mr Koizumi declares. serve as a model for privatising many other activities perKoizumi argues. Mr Koizumi's contention has

less to do with championing free market forces than with concern over Japan's future finances. If the government continues to do what private businesses can do just as well, the size of the administration will continue to swell. People need to realise that in order to avoid having to continuously raise taxes, it is crucial to reduce the functions of the government's bloated administration.

niess measures are taken to reduce government functions, "no matter how much taxes are raised, it will be like a drop in a bucket that has a hole in it." he warns.

Mr Koizumi's campaign to privatise the postal ministry as a first step towards genuine administrative reform is an unusually bold act in a country where politicians have long been expected to leave policy up to the mandarins in Kasumigaseki, Japan's Whitehall

But a third generation politi-

cian who has served twice as minister of welfare, Mr

ADVERTISEMENT

crats love to hate when on the very day he was appointed postal minister he broke a Kasumigaseki taboo by speaking out against a key policy of his bureaucrats.

versy. Two years ago he

became the man whom bureau-

His latest mission also appears so far to have won him more enemies than friends. As in the UK, where efforts to privatise the post office were recently thwarted by the resistance of several politicians, Mr

Koizumi's idea of privatising many of the functions of Japan's postal ministry faces opposition not only from bureaucrats but from every political party, including his own Liberal Democrats. Neither is it particularly popular among the general public.

"Most people still think it is not necessary to take such a drastic step," he concedes. Few politicians, not to mention the mass media or the general public. are as exercised as Mr Koizumi about the need to adopt radical measures in order to tackle the financial squeeze on the public purse that is bound to come.

But politicians are also

formed by the government. Mr Koizumi is used to contro- afraid of the consequences of speaking out. The postal unions are a formidable force in Japanese elections because of the size of the post office.

Direction must therefore come from the very top - from the prime minister himself, who will need to present the idea of privatising the post office as a cabinet policy. If that can be done. Mr Koizumi is sure there are many politicians who will be willing to follow the lead.

He does not expect such leadership to come from Mr Tomiichi Murayama, prime minis-ter, whose Social Democratic party would be unlikely to risk alienating the postal unions.

He believes Mr Murayama will do a reasonable job in carrying out some aspects of administrative reform and deregulation. But the reform of a few state-controlled organisations does not go to the heart of the problem.

Politicians and the public will realise what needs to be done and be willing to act only when the financial situation of the government becomes more desperate. "Until then," Mr Koizumi says, "I will have to proceed with patience."

Brokers fight for nterprises and enterprises and

By Emiko Terazono in Tokyo

Branch managers at Nikko Securities, a leading Japanese broker, have been scrambling to gather their ideas together ahead of the stock market seminars for individual investors held today. Over the next few weeks, the

brokers are expected to pursue a fierce media campaign against the commercial banks in bidding for the ordinary salaryman's seasonal bonus. But many officials of the broker's 126 retail branches are uncertain how much interest they can muster among their individual clients in time to get them to invest their winter bonus payments, to be distributed next month. in

With the Nikkei index down 3.6 per cent since the start of the month, and many traders nervous over the benchmark's possible fall below the 19,000 psychological support level, some Nikko managers do not

expect high participation. What worries the officials, and the Tokyo financial community, is that while overseas, corporate and large institutional investors have been cautiously investing in the stock market over the past few years, retail investors, who have shumned shares since the market started its decline in 1990, have shown no signs of

returning. Participation in daily stock market trading has declined steadily, with last month's activity by private individual investors totalling 14.4 per cent of total market turnover, a

sharp fall from 43 per cent 10

years ago. Many retail investors are still licking their wounds from the post "bubble" era plunge in share prices, with the bulk of them sitting on unrealised losses. The problem has been exacerbated by disastrons pri-vatisations of state owned

The government and brokers had hoped that flotation of such companies as East Japan Railway, part of the former Japan National Railways, and Japan Tobacco, the tobacco and salt monopoly, would lure private investors back. Instead. the Nikkei plunged 20 per cent in a month subsequent to JR East's listing in October last year, while Japan Tobacco has fallen 33 per cent from its pub-

lic offering price.
Mr Jason James, strategist at brokers James Capel in Tokyo, says a gradual rise in interest rates has damaged the case for a boom in retail stock investment seen in the US and the UK over past few years. While low interest rates prompted US and UK retail investments into equities, in Japan, the rise in bank deposit rates has kept individual investors from the equity market.

So how will the brokers try and entice retail clients to invest their hard earned cash? Many hope that by steering clear of the stocks, they can appeal to their clients.

"We're offering them deposit type investments," says one Nikko branch manager. "We have to convince people that we also offer safe and profitable products," he says.

South Africa will invest substantially more in infrastructural development

Warren Clewlow, Chairman of Barlow Limited, speaks to John Spira, Business Editor of a leading Johannesburg newspaper.

Spira: Last year Barlows went through a major restructur-ing/unbundling exercise. What was the rationale?

Clewlow: Four years of flat earnings were couse for concern and a bold decision had to be taken. During the past 20 years, the group had grown in a Literal manner, it was the right way to go for those times. However, now that we are entering a new era or South Africa's development, it was logical that we should reposition for the 1990s. Accordingly, the group was split into separate entities - Co

Smith with its consumer orientated interests; Peanert with its in-terest electronics and engineering interests; Rand Mines with its mainly creal dominated interests, and the Barlows companies, which are linked to intro-tructural expenditure. Barlows can now grow and develop vertically instead of laterally. This means we can now adopt a policy of expanding existing basi-ness and of acquiring related businesses thereuter. Both, in fact, have happened.

Spira: How does Barlows' new focus dovetail with South Africa's new era!

Clevion: Our tocus on intrastructural development positions Barlows to be a meaningful player in the reconstruction process on which South Africa has embaried to meet bosts needs devel-op our human resources and huld our economy. Intrasily all the companies are associated in one way or attorher, with civil engineering and the building and construction industry. This, of course, has been part of our business purpose for almost 70 years. We have a wealth of knowledge about our markets and will experience in them.

wide experience in them. What makes it an exercise prospect is that it is one area which what makes it an exercise prospect is that it is one area which should show rapid growth as the country begues to invest substantially more in mitrastructural development, particularly the provision of adequate housing and the apgrading of disadvantaged

Spira: How large is Barlows now?

Clevelow: We employ some 30,000 people spread across 130 companies with total assets of about R7 billion, a furniover well in excess of R12 billion and taxed profits of R335 million in the year just enucu. Our trading interests are concentrated mainly in southern Africa.

Spire: What do you regard as Barlows' strengths?

Clewlow: Management is strong allestific and has good new pleas as well as the ability to adapt quickly to changing circumstances and market-

and narries shares. They are all leaders in their areas of business and they have the resources and facilities to sustain that leadership. We have maintained a strong association with our customers over long periods and have very close affiances with our principal.

The group is now more synergy to, the companies can lorge simpler links with one another and help each other it needs be

We are conservatively financed and have a strong balance sheet. This places us in a good position to expand the existing business without any strain and of course to acquire related Most companies in the group are at the low end of their cycle

because they have been operating in recession for acting. As trading conditions improve, which they are now showing signs training evaluation inputs a state of the wall grow quickly.
Sharcholders like our culture of having a strong, otherive board which is in time with and backs management. I believe

they view Barlows is an incomment worth holding over time Spira: What is Barlows' decentralisation philosophy?

Cleulou: The group's transportant structure, which is built around a small central team responsible for overall policy, forward planning, senior ever nive appointments and so loving is well suited to decentralised decision in thing but I corphesise, with tight Our companies understand the clearly—that the control of group

finances and decisions as to priorities in the use of available funds for capital expenditure, acquisitions or other purposes are very much our responsibility at the centre. It is a system that has worked well for us over the years and now that the group will have a more pronounced cyclical factor in it, we must be conservatively geared against undue fluctuations in business eveles

Spira: What do you have in mind in terms of future acquisitions?

Clewlow: Obviously we will look for interests that are compatible with our nature of business, both locally and abroad. One of these has been our recent appointment as Caterpillar sales and service dealer in Angola. Melawis Morambique and Zambia. We have also acquired the TOSA seel tube analong and trading division of Dorby! which strengthens our market share and enhances our agent reacting. export potential.
We will, however, also be looking at grassroots developments that

Spira: Do you plan to broaden your current activities in Africa?

Clewlow: Barlows has long had good representation in countries such as Zambabwe, Broswana, Namibia and Swaziland R is particularly well placed to play a role in the infrastructural development and economic growth of neighbouring countries. We have the experience, we know Africa and, perhaps more importantly, as black down in Africa.

the development of southern Africa can only come from a dynamic South Africa, supported by Europe and the US Just as Japan was the driving force for the development of the Far East in 1990, as not the development of southern Africa, will be a South African driven success. And Barlows will be in there playing a role. The new termiones in which we have the Caterpillar dealership are a first step in this direction. We also have a small trading operation in Kenya and a number of interesting prospects are being

Spira: Does this mean Barlows will be competing internationally on a far greater scale?

examined there and elsewhere.

Clewhow: Yes, And this is why it is so important that we are a lean and efficient company without frills but with stable leadership. If we can't be competitive from South Africa into countries just over the border, then there is something radically wrong with as and we don't deserve the business. However, I don't believe that will be the case because a base attribute of all our businesses is that they can become world players. One group company is already trading in 60 countries and others are making good

progress him that there is a better polatical chimate and outdook for economic growth at home, the group can only flourish. For example, when I look at the hardship and obstacles with which black employees to our group tand black bouness generally thad to contend. I am convinced that with the new opportunities now opening up, we will be staggered at the progress we are going to see in the development of our people—and hence in our ability to compete seasonst anyone.

Spira; Barlows is well known for its support of small business. for education initiatives and for human resource development.
Will this continue?

Clewlow: Or course However, as the country changes, certain priorities that previously existed will change — and we are adaptmg accordingly Training is clearly of major importance and we are really con-

trating on developing our people — for their benefit as well, of course, as for ours. The better qualified our people are, the more competitive and successful we shall be. nes in its new form has a lower percentage of unskilled workers than before because of the usture of our particular industries; but we shall continue our efforts across all entegones

Spira: What about management development?

Cleu lowe Our management profile is young in years but remarkably well-schooled in experience, especially after having come through the past tew difficult years of recession.

Warren Clewlow

At the highest level our management team is not yet representative of the country's population. But we are working towards that goal as quickly as we can. Barlows will give new managers an opportunity to grow and to move around the group itself Exposure to our foreign know-how partners will be especially All in all, I think there is a wealth of talent in every sphere and I

am determined that II be developed. Spira: How do the overseas interests, under the umbrella of Britain's J Bibby & Sons, fit into the group?

Clewlow: Bibby has been refocused in almost exactly the same way that Barlows has been streamlined. After all, it is illogical for Barlows, whether in South Africa or elsewhere, to have interests

that don't fit.
Bibby has been through an era of consolidation after having todigical a difficult acquisition and refinancing. It is now in a much
better position to take advantage of any improvements in the
European economy, particularly in Spain and Portugal, where we
have the side Caterplitar dealership.
The Hyster dealerships in the Materials Handling division are well
placed in their US and European markets and are afteredy benefiting from the upturn in business activity, particularly in the US.
The Industrial division, with its interests in science products and
paper, is also well placed in its inche markets.
One of Barlows' greatest pluses is its strong overseas base. Some
of the operations have been held since the 1960s, which means we
don't have a need to establish ourselves outside South Africa, simply because we did so many years ago.

ply because we did so many years ago. Spira: What is your vision for Barlows?

Clewlow: Working very much in our favour is that Barlows has already shown itself to be a company with a clear mission. It possesses both the vision and the resolve to develop strategies which and the unies and provide a basic torfuture growing and the can maintain this claimty of thinking as we continue to progress and deliver realistic performance in line with our potential in the years ahead. I am confident that our culture is right for the turner.

the future. I would like to see all our companies maintaining their pre-emi-nence in the industries in which they operate by sustaining and developing their strong customer links, because all of those indus-ties will have grown tremendously.

I would hope, not, that our businesses and our made and influence

in neighbouring African countries will be well and truly estab-lished to manual benefit and that the beach-heads we have for ion, especially in Europe, will show good development along the lines we anticipate.

Most importantly, I would like to see us as a company which.

because of its committed management, logether with its loyal and skilled employees, its high levels of integrity and responsible cor-porate behaviour, good reputation and success built on perfor-mance, continues to attract the best in all positions — people who want to belong to Barlows and who want to make a contribution to the progress and wellbeing of the company and of our country.

STEEL PRODUCTS:

European steel plant for Japan

Kobe Steel, one of Japan's leading integrated steelmakers, has set up its first European production facility in the Netherlands. The new facility in the De Beitel industrial park will be Europe's largest producer of material for welding stainless steel, and is expected to be completed in May 1995, with

commercial production starting in October next year. The new facility will enable Kobe to avoid the impact of the yen's rapid appreciation, high delivery costs and import duties. Kobe plans to supply Europe and the US from its new facility. By 2000, it hopes to expand product lines to become a comprehensive producer of welding materials to supply the shipbuilding, construction and machinery industries. The European market for advanced welding materials is expected to grow to 1,400 tonnes by 2000 from an estimated 1,000 tonnes this year. Kobe Steel has a 40 per cent share of the Japanese market for welding materials. *Michiyo Nakamoto, Tokyo*

Tianjin seals \$1bn US deals

Mr Zhang Lichang, mayor of Tianjin, China's third largest city, signed a clutch of agreements or letters of intent during a recent trip to the US, garnering a total of nearly \$1bn in lanned investments. Motorola has agreed to invest \$360m to build its second manufacturing facility in the city, and General Electric plans a \$246m expansion which would add four production lines to produce air conditioning units, refrigera-

tors, washing machines and microwaves.

Competition for foreign investment between China's provinces and cities has become increasingly intense. With its population of 9.2m. Tianjin is stressing its huge market. skilled workforce and "stable society and fine public order" However a survey of foreign investors said laws and regula-tions were ignored, intellectual property protection was inadequate, and its bureaucrats are incompetent, especially at the lower levels. Nancy Dunne, Washington

Marubeni Corporation of Japan is to set up a joint venture with other foreign companies and the provincial electric power bureau to build a 132MW coal power plant in China's Guangdong province. The venture will invest about \$1.3bn to build the plant for completion by 2000. Reuter. Tokyo

Japanese group makes early foray into Asian semiconductor plant investment

Mitsubishi in Taiwan chip venture

conductors.

Japan's trade with the EU and US

By Michiyo Nakamoto in Tokyo

Mitsubishi Electric yesterday said it would invest in a joint venture semiconductor facility in Taiwan to produce advanced memory chips.

This will be one of the first big investments by a Japanese semiconductor maker in an Asian manufacturing facility outside Japan.

Mitsubishi is to co-operate with Umax Data Systems, the parent company of Taiwan's largest printed circuit board maker, and Kanematsu, a Japanese trading company. The Taiwanese stake in the joint venture will be about 60 per cent, with Mitsubishi taking 15 per cent. Kanematsu 16 per cent and Japanese venture capital funds the remain-

Mitsubishi's move reflects growing competition in the memory chip market to increase capacity in order to meet forecast demand. It also consolidates Taiwan's status as one of Asia's leading

high-technology manufacturing bases. The joint venture facility will be in an industrial park north of Taipel and will start production of 16-megabit dynamic random access memory chips next autumn.

Mitsubishi's investment decision was based on Taiwan's increasing importance as a manufacturing base for computers, the main users of memory chips. Taiwan probably makes about one third of the world's PCs, a Mitsubishi spokesman said.

Taiwan's comparatively well developed infrastructure and the availability

factor, Mitsubishi said.

A third element was the enthusiasm of the Taiwanese government, which is keen to develop an indigenous semiconductor industry. Although Taiwan is a big manufacturing base for computers, it does not have sufficient semiconductor manufacturing capacity to meet computer industry demand. At the same time, a large part of its growing trade deficit with Japan has been in electronic components, such as semi-

The joint venture in Taiwan will enable Mitsubishi to share the cost of setting up a semiconductor manufacturing facility. Although the total investment in the facility was not revealed, building a semiconductor plant was not

of gas, water and electricity were also a likely to cost less than Y50hn (\$512m), a Mitsubishi spokesman said.

The project will also give Mitsubishi a valuable oversess manufacturing base for memories, which are expected to become the dominant product in the market from around 1995. The company has plans to expand semiconductor manufacturing at its facility in Japan but its overseas operations are seen to have lagged behind those of other leading Japanese semiconductor makers.

Mitsubishi's investment follows nnouncements by NEC, Hitachi and Toshiba, of increased investments in memory chip production. Japanese chip makers believe market demand will continue to be strong, particularly with the advent of multimedia technologies which require a lot of memory capacity.

US signs big UK aircraft order

By James Buxton. Scottish Correspondent

Jetstream Aircraft. the troubled turbo-prop subsidiary of British Aerospace. has signed a contract to sell up to 60 of its Jetstream 41 commuter aircraft. The contract, which could be worth as much as \$420m,is with Trans States

Airlines of the US. The order will boost substantially the workload at Jetstream's sole plant at Prestwick in Ayrshire, Scotland Itwill also strengthen Jetstream's hand in negotiations with other European manufac-turers on a strategic alliance of turbo-prop aircraft produc-

Trans States has placed firm orders for 25 Jetstream 41s, with an option for an additional 35. The first aircraft will be delivered to Trans States in St Louis, Missouri, next February, with the rest delivered during 1995 and

Trans States is a regional airline which has code sharing alliances with TWA, USAir, Northwest and Alaska, It already operates the 19-seat Jetstream 31 aircraft.

Mr Hulas Kunodia, president of Trans States, said the 30seater aircraft was selected for its ability "to contribute to the bottom line". It had the lowest operating cost of any 30-seat

Large aircraft orders are particularly prized among turbo-prop aircraft producers. who have large overcapacity and a dire shortage of contracts. In October 1993 Jetstream announced a cut of 630 in its workforce of 2,500 at ing loss of £120m (\$196.8m) in 1993 and British Aerospace made a £250m provision to cover turbo-prop leasing liabil-

restart the talks, adding that Japan had outlined three conditions for doing so. Last Thursday Mr Mickey Kantor, US trade representative, said he and Japanese trade minister Ryutaro Hashimoto had agreed to re-open vehicle sector talks, but set no date. The talks have been stalled since the two sides falled to reach agreement at the end of

Yesterday Mr Kantor warned Japan that he intended to pry open its automotive market, even if that meant resorting to unilateral trade measures.

"We are going to make sure we make progress one way or another," Mr Kantor, in Jakarta for broader Asia trade talks, said.

President Bill Clinton, also attending the Asian-Pacific trade talks in Indonesia, told prime minister Tomiichi Murayama yesterday that more progress on trade - especially cars and car parts - was

planning consent, has been revised twice in the past two years to make life easier for new shops. Since the second revision last May, the number of supermarkets to open in Japan has quadrupled to about 80 a month as a result. Yet still less than 10 per cent of supermarket goods are Meanwhile, Reuter reports

aircraft available. car and car parts market,

Jetstream has been in talks with the Franco-Italian ATR consortium, a joint venture between Aérospatiale and Alenia, on a proposed strategic alliance on regional aircraft of 30 to 80 seats. Although there has been speculation in the industry that agreement was near, British Aeropsace yesterday refused to confirm this. and said it was also in talks with other companies.

The Trans States order will strengthen Jetstream's hand in any negotiations. It has been suggested in the industry press that under an agreement with ATR, Jetstream would stream 41, but would eventually drop the less successful 70-seat Jetstream 61, a direct competitor with the Franco-Italian ATR 72. It would become involved in developing and manufacturing the 84-seat ATR 82, which ATR wants to launch early in 1995.

Japan under pressure on two fronts

William Dawkins and Michivo Nakamoto on talks with the US and the EU

Politely disguised anguish may be present beneath the smites of Japan's senior politicians as they welcome their latest batch of guests to trade talks in Tokyo

Delegations from Japan's two biggest trade partners, the US and the European Union. will arrive in Tokyo to obtain fresh promises that Japan realise its much vaunted plans to reduce the more than 10,000 regulations which protect and constrain an estimated 40 per cent of industrial activity.

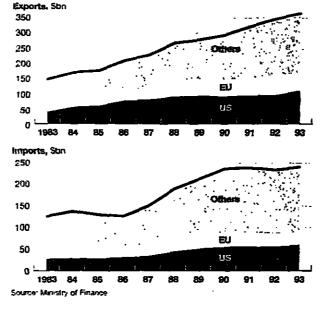

Trade tactics employed by Washington and Brussels over Japan have converged in substance as well as in timing. The US will take a more co-operative line with Japan. because it is tired of being accused of bullying, while the European Commission will take a tougher line because it is tired of being accused of failing to get results.

Washington has turned away, at least for the moment. from its former strategy of pushing for import targets and promises to be less confrontational, though no less demand-

Brussels will, for the first time in several years, demand tangible progress. The message is that there is a limit to the EU's patient trade diplomacy with Japan, until now limited to polite statistical studies of foreign shares in each others markets.

The commission has a secund objective Sir Leon Brittan. Commissioner responsible for external economic affairs. wants to return home with a promise that European companies will not be cut out of Japanese trade deals with the US. Some member states are uneasy that well mannered Europe wins none of the big trade prizes achieved by US table thumping. Motorola's access to the mobile telephone market, won early this year, and US dominance of Japanese defence procurement are pointed to as examples.

Pressure is building up from European suppliers, such as France's Dassault Aviation. which wants the airforce to buy its Mystère Falcon busi-

ness jet for transporting officers. Another is Britain's GEC-Marconi, hoping that Japan's defence agency will be allowed the political freedom to carry out its wish to buy UK instead

of US minesweeping sonar. The US delegation today begins two days of talks, in which it will present Japan with a list of deregulation steps across 10 industries. Sir Leon and two Commissioner colleagues meet ministers on Saturday with a similar shopping list covering eight sectors.

Examples of long standing demands, shared by the US and EU, include: An end to the mass of plan-

ning and operating restrictions that impede the growth of supermarkets, a move which would spell death for the 1.5m small, family-run businesses that dominate Japanese high streets, but high profits for the budding discount sector.

 Lay open the maze of restrictions that ensure that handle a mere 0.2 per cent of Japan's Y170,000hn (£1,075hn) pension funds. • Streamline the arcane car

inspection system, which requires each new vehicle to be checked twice, by two different government agencies, before it reaches the road. This ensures most car makers can only make a profit if they sell high volumes

Review the statutes of Ninpon Telegraph and Telephone, the domestic telecommunications monopoly, to make it cheaper for private sector operators to plug international or long distance calls into NTT's

• Ensure that Japanese government policies for more open public procurement are carried

The signs are that the Japanese government and the behind-the-scenes power of big business also impede foreign competition.

Retailing is a good example foreign investment managers because it touches everyday

needed, a US official said. INTERNATIONAL ECONOMIC INDICATORS: BALANCE OF PAYMENTS

Due to the introduction of the Single Market. EC countries are currently changing to a new system of compling trade statistics. All trade figures are seasonally adjusted, exciting series and the German current account. Imports can be derived by subtracting the visible trade balance from exports. Export and import data are calculated on the time on board) basis, except for German and Italian imports which use the CIF method (including carriage, insurance and freight charges). German data up to and including 1910, shown in talks, refer to the tarrier West Germany. The nominal effective exchange rates are period averages of Bank of England trade-weighted indices. Data supplications and WEFA from national government and central bank sources.

YES SWEDEN SAYS TO EUROPE

On Sunday 13 November the Swedish people voted yes by majority to accept their Government's application for membership of the European Union. On 1 January 1995 Sweden will finally become a member.

We all welcome the outcome of the referendum. Our businesses have been part of Europe for a long time, working in the United Kingdom for closer links between our two countries.

WORKING FOR CLOSER TRADE LINKS

Rebublicans look to 1996 presidential election after last week's congressional victory Gramm, Specter eye White House Depleted Democrats battle for party's soul

By George Graham in Washington

Leading Republicans have barely savoured the triumph of last week's crushing victory in the US congressional elections before setting their sights on the presidential election in 1996.

Small towns in lowa and New Hampshire, the first states to hold ballots in the 1996 primaries, have been crowded over the last three days with hopeful Republican candidates, as Senator Phil Gramm of Texas and Senator Arlen Specter of Pennsylvania formally threw their hats into the ring for their party's presidential nomination.

It came as no surprise that Mr Gramm, an abrasively conservative economics professor, should announce that filing papers this week with the Federal Election Commission to put the legal structure in place for a campaign.

Mr Gramm has made no secret of his plans, and clearly wishes to capitalise on last week's election success, for which, as chairman of the Republican senate campaign committee, he can claim at least partial credit.

But Mr Specter's announcement that he is "exploring" a candidacy is seen as a more quisotic venture - and perhaps a sign that the Republicans' prospects are not so unclouded as they might appear after last week's triumph. which has led many in the party to conclude that President Bill Clinton is destined to follow the last Democrat in the White House as a one-term

Arlen Specter: his candidacy suggests that he would attempt to pull the party back towards the centre

run, with minimal hopes of winning, suggests that the party could have trouble remaining united after its tilt to the right in recent years.

His candidacy would resemble in some respects that of Mr Paul Tsongas in the 1992 Democratic primaries - a bid to pull his party back towards the centre, more than a realistic quest for the nomination.

resident.

his mind by February 15. At least six members of Mr Bush's cabinet - secretary of state James Baker, defence secretary Dick Cheney, labour secretary Lynn Martin, housing secretary Jack Kemp, vice-president Dan Quayle and education secretary Lamar Alexander are also possible candidates.

Of these. Mr Kemp started with the most public esteem but it is Mr Alexander who now appears to have the best

A former governor of Tennessee, he is not widely known but has built a strong political network, and is likely to win wider support among the 31 Republican governors than other candidates more rooted in Washington. Iowa, which holds party caucuses in

January of a presidential election year to decide who to nominate for the presidency, counted for little in 1992 because Senator Tom Harkin, a candidate for the Democratic nomination, was widely expected to sweep his home state. New Hampshire holds the first presidential primary in the country

Both states have in the past provided an important springboard for candidates to raise their national profiles and to attract money for their campaigns in the rest of the country.

In 1996, however, California and New York will both hold their primaries much earlier in the process, instead of

waiting to the end. Campaign managers believe therefore, that a serious candidate will need a good organisation and at least \$30m in hand by January 1996.

After taking a severe beating at the hands of their Republican opponents in last week's elections, the Democrats yesterday started to fight among themselves over who should control what remains of their

Congressman Charlie Rose of North Carolina was expected to announce yesterday that he would challenge Congressman Dick Gephardt of Missouri for the minority leadership, setting the scene for a pitched battle between the Democrats'

competing wings.
If the Democrats had kept a majority in the House of Representatives. Mr Rose might well have challenged Congressman Tom Foley for the speakership. But in the Democrats' general defeat. Mr Foley lost his own bid for re-election in eastern Washington state by the slim-

mest of margins. As majority leader in the outgoing Congress. Mr Gephardt ranks second in his party to the Speaker. With no speaker, the minority party's

eader ranks first. Mr Rose represents the more conservative southern wing of the Democratic party, strongly supporting tobacco growers -

minority leader in House

often despaired of getting him to stick to its philosophy. In the mid-1980s, however, Mr Gephardt moved to the left, and ran unsuccessfully for the Democratic presidential nomination in 1988 as a pro-union protectionist

Generally recognised as an extraordinarily skilful manager of the Democratic congressional caucus, Mr Gephardt starts the contest with a clear edge over Mr Rose.

Democrats will not return to Washington when the new Congress meets in January, through either retirement or defeat. In Mr Rose's own state of North Carolina the Democrats lost four of the eight House seats they had held.
Of the expected 294 Democrats in the new House (results from some districts are not yet final) a clear majority repre-

Peru's success hampers quest for debt deal

Sally Bowen and Stephen Fidler on a difficult case for generosity

powerful economic recovery could well hamper the Peruvian government's quest for an advantageous debt deal with its bank creditors. With the economy likely to grow at the fastest rate in Latin America for the second straight year, and its foreign exchange reserves at a record \$6bn (£3.6bn), it could be tough convincing banks that Peru

deserves generous treatment. Recent announcements by economy and finance minister Mr Jorge Camet suggest talks may start in mid-December.

Not before time, says Mr Carlos Bolona, former economy minister and architect of Peru's far-reaching economic liberalisation and reform programme. According to Mr Bolona, Peru had made substantial advances towards a "Brady" debt reduction accord in 1992 "when negotiating conditions were considerably more propitious than today".

The time was right, when both the debt price and international reserves were still low," says Mr Bolona. "Now you can't go crying to the banks, and negotiating will be much harder." Peru's debt is trading in the secondary market at around 56 per cent face value, compared with less than 20 per cent at the end of 1992.

速点心

es ameder

A deal in 1992 was stymied, however, by the still-unexplained sacking of Mr Bolona and a battle over a disputed \$72m debt to two New York banks - which was formally recognised by the Peruvian Congress only after 10 months of deliberations.

Ministry advisers are now saving they would like to see a Brady deal in place some time next year. Many bankers think this may be difficult, particularly given presidential elections next April.

Two technical obstacles must be cleared. The banks insist that Peru pay some \$1.5m in legal fees they incurred in legal actions against the government, and the government insists the banks withdraw all pending lawsuits.

The main complication will be the huge amounts of interest arrears owed dating back to 1984. "Peru is the country with the largest ratio of arrears to principal; that's going to involve some hard negotia-tions," says Mr Peter West of the London-based West Merchant Bank. According to calculations by the Institute of International Finance. an international bank think-tank in Washington, using contractual interest rates the ratio of interest arrears to principal will be 142 per cent by the year end, and 163 per cent by the

end of next year. Banks have always resisted giving generous terms on arrears to discourage debtors from delaying interest payments. The sticking point will not be the terms on the roughly \$3.5bn of principal ~ that is likely to be fairly rapidly settled, say bankers, at a discount of 45 per cent (as in Ecuador's just completed deal) or 50 per cent (as in Bulgaria). The sticking point will be what happens over the more than \$4.2bn in overdue interest.

Some economists think that a generous settlement on interest is needed, given that Peru's overall debt position remains critical despite the breathers given under a generous Sep-tember 1992 rescheduling deal with the Paris Club of creditor governments. The country owes more than \$22bn, almost six times current annual export earnings and probably

not far short of actual GDP. with leading bank creditors Mr Paul Luke of Morgan Grenfell in London argues that the banks will be forced to write off some of Peru's past due interest. Without this, he argues, it will be impossible to finance the debt deal from the country's tax revenues which have proved notoriously difficult in the past to increase beyond present low levels of around 11 per cent of GDP.

Mr Roberto Abusada, now an adviser in the economy ministry and a former vice-minister. agrees. "We're at the limits of our fiscal possibilities and we need a highly advantageous

Mr David Atkinson of Standard Bank in London believes the negotiations will not be easy, but thinks banks may well worry less about setting precedents with a relatively generous settlement on interest arrears.

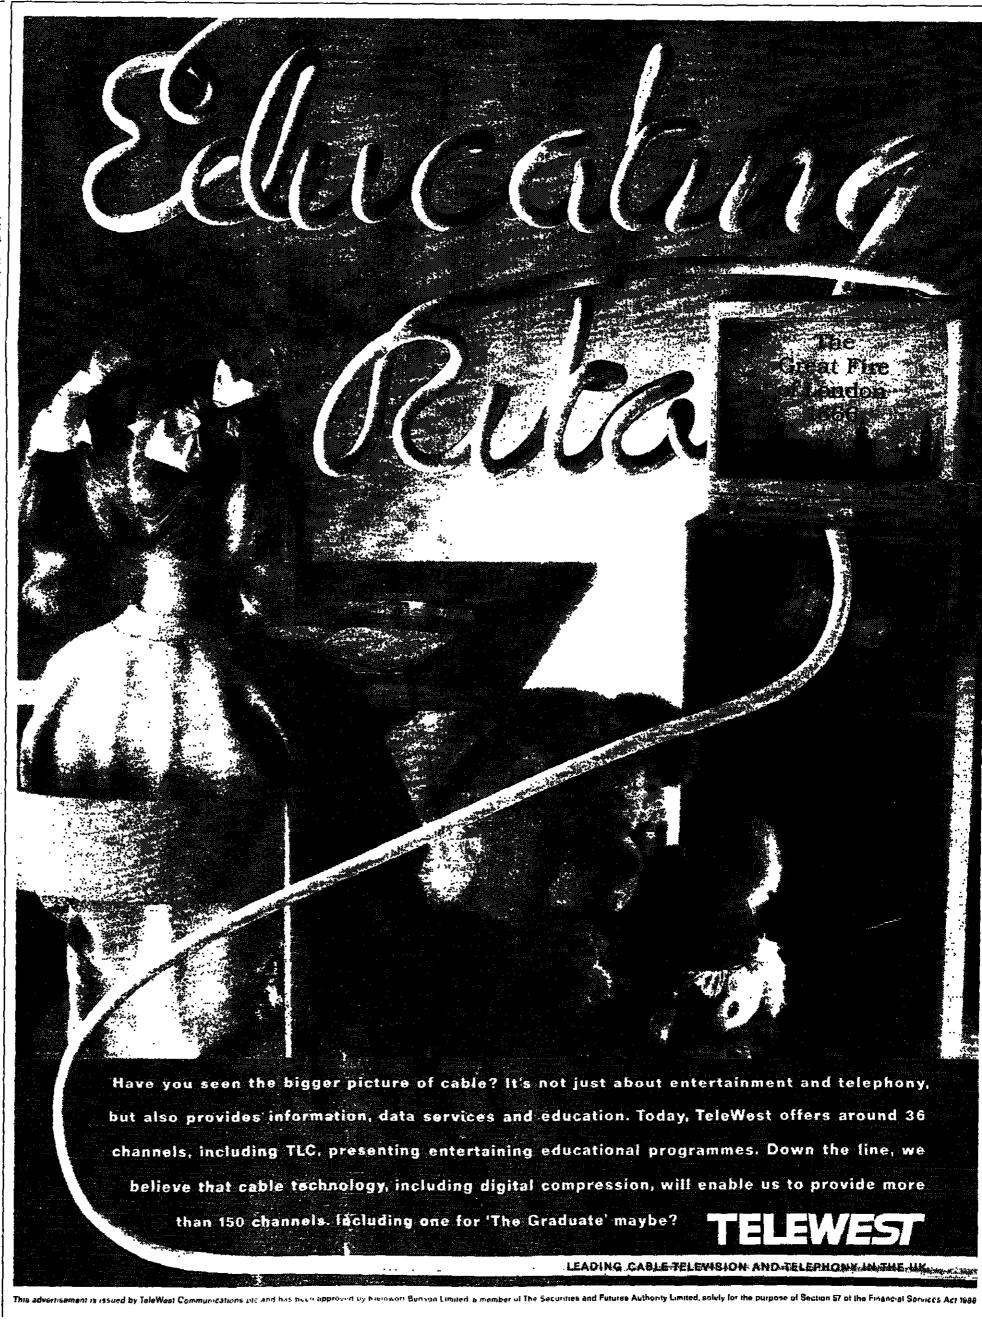

Many bankers think that Peru's high reserves should allow a buy-back of some of the debt for cash - something Ecuador could not afford. Furthermore, a prolonged negotiation could allow further debt to be liquidated through debt-toequity swaps in the government's privatisation programme

Peru has raked in large amounts of cash from state company sell-offs. The total so far exceeds \$2.7bn and there are important assets, including electricity generating compa nies, fishmeal plants, oilfields and refineries and the giant state-owned mining and refin ing company Centromin, still to go under the hammer.

Economy ministry officials say privatisation has added some \$2bn to the reserves and this cannot, by law, be diverted into debt repayments. In addition, bank reserve require-ments mean that 45 per cent of all dollar deposits in Peru about two-thirds of total deposits - are placed in the central bank, hugely swelling the reserve total.

Peru also has a large deficit on current account - around \$1bn for the first half year alone. It is being financed by the inflow of long-term capital. mainly from privatisations and the short-term capital still flooding into the high-performance Lima stock market.

Neither of these sources can be counted on to continue for more than a year or two. Export earnings, though on target for a record \$4bn this year, remain vulnerable to fluctuations in raw materials prices. Peru's real capacity to service debt has thus changed little in 15 years.

the mainstay of his North Cartion has moved the Democratic By George Graham olina district - and playing congressional party to the left. Low gas prices are 'unsustainable'

By Robert Corzine

British Gas says it is making little effort to regain market share in the industrial sector because present low prices are "unsus-

Mr Simon Kirk, managing director of Business Gas, the new name for the contract trading division which sells gas to industrial and commercial users, said yesterday customers were getting "a wonderful deal" because of intense competition in

But he said industrial gas prices had

fallen "too low for gas companies to make money on a long-term basis". Ofgas, the industry regulator, recently lifted restrictions which prevented British

Gas from offering discounts to commercial customers. The restrictions were imposed to encourage the growth of competition in the industrial segment of the market.

British Gas's share of the overall market above 2.500 therms a year has fallen to 51 per cent, according to Mr Kirk, and could fall further. In the large company market above 25,000 therms the share has fallen to 14 per cent. But the company was not

of the low prices. Instead it will focus on

than 25,000 therms.

He predicted that the competitive pressures in the sector were unlikely to ease soon. Some executives at independent gas marketing companies do not expect the market to improve for at least a year.

Oiling the wheels of economic success

Liverpool must work hard to reap the rewards from its local oilfields, says Ian Hamilton Fazey

"Klondike mentality" on Merseyside in northern England is preventing some companies in the region from seizing the opportunities offered by big fields off Liverpool.

Mr Alan Kennedy, a recently retired Shell executive with more than 20 years' experience of the offshore industry, who advises a local authority, says local companies will have to fight hard to win business arising from the oil finds.

He claims some are not ambitious enough and expect orders to come to them simply because they are on the spot. The oil industry doesn't need Liverpool and Mersey-side," he warns. "It's self-contained and can import every-

thing it needs." His caution is echoed by Mr John Carne, operations direc-tor of US-owned Cooper Energy Services in Bootle. "I discourage the belief that this will be another Klondike," he says. You have to take a more measured approach. One should not predict success on the back of a few oil and gas fields - we have to be cautious." Those "few" fields could be

significant. They are in Liverpool Bay, the stretch of Irish Sea in the right-angle formed by Lancashire and North Wales. There are 200m barrels of oil, mainly in Douglas, a field 15 miles north of Point of Ayr on the Weish side of the Dee estuary. The rest is in a field called Lennox, five miles west of Southport. Lennoù also contains gas

part of 1.000bn cu ft found there and in two other fields by Hamilton Oil, a subsidiary of Broken Hill Proprietary, the Australian steel, minerals and energy group. Gas has also been found in nearby fields called Hamilton and Hamilton North. Field life is estimated at 17 years, but the Hamilton consortium - its partners in the exploration are Lasmo and Monument - expects to find more. In fact, 16 companies have obtained exploration licences for the area. Hamilton chose the unused

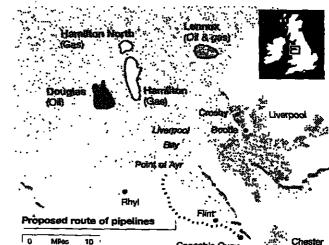

docks at Bootle as the onshore supply base for the project.

areas, including Barrow-in-Fur-ness in Cumbria and Heysham in Lancashire.

The activity has raised local expectations, which political and business leaders are trying to curb so local people will not be disappointed if no bonanza results. Ms Rita Darwin, head of economic development for the Merseyside borough of Sef-ton, says: People have watched Dallas on television and think this is what happens when oil is discovered on your

They look at the growth of Aberdeen 20 years ago and hope for something similar. But Aberdeen became a boom town with an oil price of \$30 [£18] a barrel. Something similar is not going to happen here with the price down to \$18." As margins have tightened.

oil companies have become increasingly cost-conscious. 'We don't expect Hamilton to employ a lot of people." Ms Darwin says. "Meeting techni-cal specifications locally may also require a lot of investment as well as a new understanding

Developments in Liverpool Bay

of what is meant by service in an industry that expects it instantly, 24 hours a day. "But we also know they will

h,m 16

want day-to-day consumables. This is where we are already beginning to see immediate benefits to the local economy."

These may be merely the crumbs of Hamilton's total £350m budget for all onshore and offshore spending on the Liverpool Bay project - but they can sustain a lot of small

Mr Mike Swift, director of Sefton Chamber of Commerce and Industry, says: "To get any of this new money into the local economy, we have had to learn how the oil and gas industry buys its goods and services. We have also had to understand it's not another Klondike where fortunes will

FINANCIAL TIMES TUESDAY NOVEMBER 15 1994

BT set,

There is only one problem with a car designed by computer. It looks just that; designed by computer: functional, predictable, soulless. That's why we entrusted the design of the GS300 to Giorgetto Giugiaro. The result is perfection down to the smallest detail. Like the LS400, the GS300 is a perfect union of aesthetics with technology. For instance, everything, from the headlights to the door handles, has been designed to create the lowest possible wind resistance. Inside, a choice of leather or velour upholstery, air conditioning and

7 speaker CD player, defies the notion that beauty is only skin deep. Under the bonnet, the GS300's 212 hp (156 kW), 3-litre, 24 valve engine is mounted on its own sub-frame, before it is assembled on the body to absorb the slightest vibration. Its 4-speed automatic transmission adapts to the driver's mood and its independent double wishbone suspension guarantees high speed stability, confident braking and precise cornering. For peace of mind, the GS300 comes equipped with a host of safety measures. Advanced electronic ABS

brakes and seat belt pre-tensioners are standard, as are driver and front seat passenger airbags. However, to truly understand what we mean by 'the relentless pursuit of perfection', get behind the wheel of the Lexus GS300. A test drive is worth a thousand words.

Lexus GS300. The pursuit of perfection drives the pursuit of pleasure.

MPs to safeguard role of mandarins

By Philip Stephens, Political Editor

An influential committee of MPs is set to call for a statutory code of conduct to guarantee the political independence of Britain's civil service.

In a report critical of the dopted by Sir Robin Butler, the cabinet secretary. the committee is expected also to insist that ministers remain directly responsible to parliament for semi-independent

executive agencies.

The report by the Treasury and Civil Service committee is understood to reject Sir Robin's view that existing rules and procedures provide sufficient protection for the impartiality of the civil service.

The report's publication

next week will echo disquiet among Sir Robin's colleagues in Whitehall about his highprofile role in a number of include his investigation of ministers in the "cash-forquestions" row and his exoneration of Mr Jonathan Aitken, the Treasury secretary, in the dispute over payment of a bill for a weekend stay at the Ritz Hotel in Paris.

The report, due to be published on November 24, has been endorsed by the full committee, which has an in-built Conservative majority.

The proposal for a code of conduct with statutory back-ing to replace the dozen separate sets of rules under which civil servants now operate, falls short of the more prescriptive Civil Service Act favoured by some MPs.

But the new code would set out in simple terms the obligation of civil servants to be impartial and objective and would highlight the duty of ministers to respect their offi-cials' political neutrality.

It would also end the present system in which the cabinet secretary is the final arbiter in cases where civil servants claim they are being pressured to act improperly. The MPs also recommend an

Fresh controversy over Pergau dam

By James Biltz Britain could use its overseas aid budget to fund Malaysia's Pergau dam project, despite a High Court ruling last

week that the government had acted illegally in making such donations.

Amid growing controversy about the use of aid money to help finance international arms deals, officials at the Treasury, the Foreign Office and the Overseas Development Administration have been examining ways of paying more than £200m to Malaysia without contravening the court judgment.

The High Court ruled the ODA could not make direct payments for the Pergau dam project because it does not promote the development of a country's economy as required by UK law.

examining a scheme whereby the ODA could be required to make the payments indirectly so that Britain continues to meet a commitment made by Mr Douglas Hurd, the Foreign Secretary,

three years ago. Under the proposal, the cost of Britain's aid donation to Malaysia would be met from the Treasury's contingency fund. The Treasury would then make commensurate cuts in the ODA's budget.

The Foreign Office is understood to have warned that this method of paying the Malaysians could run counter to the spirit of the High Court judgment and might invoke further legal penalties. However, Foreign Office officials will be keen to ensure that the payments

However, Treasury officials are now do not come from their own budget. In wake of the High Court ruling, the government must decide quickly on how it will make the payments.

Under the agreement struck with the Malaysian government, the ODA agreed to use its Aid and Trade Provision to provide a total of £234m in staged payments to help build the dam.

The government still has to make some £216m of these payments, which meet the costs of borrowing funds at concessionary interest rates to help build the dam. The next payment some £15m - is due on December 20.

The controversy over the Pergau dam comes amid speculation that the UK has used development aid to forge a £6.1bn arms deal with the Indonesian

At the weekend, the Foreign Office rejected any connection between weapons contracts and aid packages to the

government of President Suharto. However, it emerged yesterday that UK military officials are planning a four-month military tour of Indonesia and other Far Eastern countries next year to promote UK naval equip-

It is understood that Westland-built Lynx helicopters will be demonstrated to potential buyers when two Royal Navy frigates join Operation Australasia '95 in June.

The ships will visit Indonesia, Malaysia, Singapore, Brunei, Thailand, Australia, New Zealand and Sri Lanka during the tour, scheduled to last from June to October.

Shaking off the glitches that plagued trial runs, high-speed trains rolled on schedule Monday during the first day of regular passenger service linking Paris, London and Brussels through the Channel tunnel. The inaugural London-Paris train even arrived two minutes early. Ten minutes after leaving Waterloo station the \$40m.

18-car train hit its top speed of 300km per hour (187 mph), slowing to 160 kph (100 mph) for the 20 minutes it took to pass through the 31.4-mile tunnel.

Major determined to shake 'sleaze' image

By David Owen

Mr John Major last night underlined his determination to shake off the charges of sleaze that have damaged his government. with a robust attack on MPs who take on too many paid outside interests.

The prime minister used his speech at the Lord Mayor's banquet in London to defend the right of MPs to have outside interests and to argue that Britain would not benefit if

parliament were populated by "wholly professional" politicians. But he said Westminster should not be "a hiring fair" or "way" to other jobs, "as frankly it sometimes has

Speaking as MPs prepared for tomorrow's Queen's Speech detailing next year's legislative programme, Mr Major said the recently established Nolan committee would have a continuing role in policing stan-dards in British public life.

The body's task was not just to meet "immediate questions", he said. It was "to act as a running authority of reference - almost. you might say. an ethical workshop called in

to do running repairs. In a speech billed by Downing Street as more than usually his personal creation. Mr Major underlined the importance of attracting the "right people" into public service and urged commentators to use their "very great" freedom to

attack and expose with respon-Acknowledging the need to

improve the accountability of the public service. he said government had been "too secret too long." "It is damaging if there appears to be some kind of inside track - a gulf between those who know how to play the system and others who do not," he said.

In a speech that ranged much more widely than the occasion's traditional focus on foreign affairs, Mr Major also commented on the economy. business and Northern Ireland.

Welcoming recent remarks on the need for responsibility in setting executive pay levels, he said there was "no doubting the resentment that large and often unjustified pay rises" could cause

He said British capitalism had become "capitalism with a conscience, but there was still more that business could do to

Court ruling a boost for Lloyd's Names

Hard-hit members of Lloyd's of London yesterday won a court order forcing details to be given on the level of insurance cover bought to meet possible negligence awards by the professional agencies they are suing.

The ruling in the High Court may lead to some indication being given about the amount of money available to meet any damages awarded to Names, the individuals whose assets have traditionally supported the Lloyd's insurance market.

The decision is a fillip for Names such the Gooda Walker Action Group members who last month won damages they estimated at £504m against Lloyd's agencies but have yet to discover how much they might actually receive.

However lawyers acting for those who provided the "errors

and omissions" cover said they would appeal against the

Row over nuclear waste dump

A proposed nuclear waste dump in Cumbria, northern England, should be abandoned because it is in an earthquake zone, says Greenpeace, the environmental campaign group.

It said the safety risk at the underground Nires site at Sellafield was being ignored by the government and nuclear industry, which had chosen the site for political, not geo-

Nirex dismissed the claim as "nonsense". A decision or planning permission is at least four years away.

Editor to step down

Mr Andrew Neil, editor of the Sunday Times for 11 years yesterday severed most of his links with Mr Rupert Murdoch's News Corporation in a pay-off reported to be in the region of

Mr Neil, 45. has turned down the offer of a nightly US TV show after Mr Murdoch's Fox Television network axed his

planned weekly current affairs programme. He will now concentrate on a freelance broadcasting and writing career, including a book about his 10 years as Sunday Times editor. But he will continue to write for the paper

occasionally after he steps down on December 31. "It's not divorce, it's an amicable separation," he said in London vesterday.

Convenience food sales rise

Ready-made meals comprised almost 35 per cent of the average UK household's food bill last year, a rise of nearly 10 per cent since the early 1930s, according to the 1993 National Food

Sales of pizzas, frozen chips, crisps and other potato snacks also rose, while consumption of beef and lamb has dropped. according to the survey, published by the Ministry of Agriculture Fisheries and Food.

The Meat and Livestock Commission said high lamb prices probably accounted for the drop in consumption, while beef sales had been influenced by adverse publicity about BSE mad cow disease. The survey showed that fresh potatoes accounted for 40 per

cent of household consumption by weight in 1993 compared

independent appeals system.

In just five years since reunification, the former East Germany has become one of the most attractive locations in Europe for international investors.

Tel.: +33 1 44 43 00 00 Fax: +33 1 44 43 00 10 .: +32 2 775 05 11 +32 2 775 05 99

+65 538 80 78 +65 539 63 97

One of the prime reasons is its new and advanced telecommunications infrastructure, the most sophisticated in the world. And the speed with which Deutsche Telekom has put it all in place is in itself a feat of engineering unparalleled in the world of communications.

Currently, no fewer than 100,000 new telephone lines are being connected every month - over twenty times more than in the old German Democratic Republic.

The telephone infrastructure for Eastern German industry is already fully established. 75% of all local networks have Tel.: +7 50 22 56 51 09 Fax: +7 50 22 56 51 10 been completely overhauled.

Data lines are now available in every area. And the same applies to mobile networks, radio, television and, from 1995, ISDN - the new nervous system of European industry.

In high-performance fiber optics technology, Eastern Germany even leads the field. As the world's first network operator, Deutsche Telekom is bringing fiber optics right to its customers' doorsteps in the eastern part of the country.

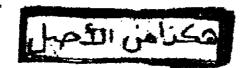

So a sound basis has been created for a secure and successful future. Now it's up to investors to make a shrewd decision on where to set up business.

Telecommunications made in Germany.

7

executive, yesterday. Gates described his vision of how data networks will change the way people work, learn and communicate by the year 2005 at the huge Comdex computer trade show in Las Vegas. He said his planned on-line service will be a significant step toward realising the full promise of personal computing by putting "information at your finger-

ups". Microsoft's plans are not just futuristic dreams. The world's largest and most profitable software company aims to make the on-line services business a central element of its long-term growth. As well as investing heavily in the new business venture itself. Microsoft is forming partnerships with tele-phone companies, publishers and entertainment groups to create a

broad range of on-line services. in preparation for these services. Microsoft has developed software for users and information providers. The company is also proposing a business model that it believes will draw substantial third party investment to creating new interactive on-line services, greatly expanding the market.

The ultimate goal is to establish the Microsoft Network as a standard "platform", or technology foundation, for interactive on-line services in much the same way that its Windows program is the software base for a huge variety of personal computer applications.

The Microsoft Network "will provide a setting for a worldwide electronic marketplace of products and services from Microsoft and third

parties," the company says.

Access to the Microsoft Network will be one of the features incorporated in Windows 95, a new version of the widely-used PC operating system program, to be released next April or May. Purchasers of PCs loaded with the new software as be offered a discount or free trial of card and direct bank debit the basic communications services of the Microsoft Network. These will include electronic mail, bulletin boards and chat lines.

But Microsoft plans to expand its on-line services quickly with the addition of newspapers and magazines, shopping catalogues, games and educational services as well as its own base of services. To draw publishers to its network, Microsoft is offering them flexibility in how they run and charge for their on-line services.

An on-line magazine on the Microsoft Network might, for exam-ple, charge a modest subscription fee but raise additional revenue from advertising. A shooping cata-logue might offer free access but charge a transaction fee. Both will be able to control the look and feel of their on-line service to preserve their brand image.

We will be more flexible than existing on-line services," says Bill Miller, Microsoft director of on-line services marketing. "Providers will not be limited in the ways in which they realise revenue for their services. More important, they will retain the majority of the revenues that their content and services gen-

Most of the current on-line services charge users simply according to how much time they spend connected to the service and pay "content-providers" a flat 20-30 per cent share of revenue. For users, Microsoft's plan will mean lower fees for basic services and the will then sign on to the service.

ing centres.

Through an agreement with Visa, the biggest credit card provider, Microsoft is also creating tools to ensure security of on-line transactions using encryption technology.

Microsoft has also developed

software to make its on-line services easy to use. Methods for navigating the service will be based on the familiar Windows interface. One enhancement will be "short-cuts" - the ability to return to a favourite on-line service simply

by clicking on an icon. Companies could use such icons as a marketing tool, Miller suggests. They might, for example, send icons to users via electronic mail in much the same way that companies today distribute advertising materials in the post. Some users will throw away this "junk electronic mail", but others will be tempted to click on the icon to look at the products or services on offer.

By matching its approach to on-line services closely to conventional business practices, Microsoft expects to attract a broad range of potential on-line service providers that have until now been struggling to figure out how to make money in the new world of interactive multimedia services.

Companies going on-line via the Microsoft Network will nonetheless be taking a leap into the unknown. It is yet to be seen how many of Microsoft's Windows 95 purchas

Companies going on-line via the Microsoft Network will nonetheless be taking a leap into the unknown

option to spend more on specific information sources. It also eliminates the biggest drawback to exploring new on-line services - the cost of connect time as you browse. To support this new approach to the on-line services business. Microsoft has created a well as those who upgrade their sophisticated billing and tracking "Companies that are writing services in antic current versions of Windows, will system that will be linked to credit applications for the Internet today Microsoft Network.

In contrast, companies such as Mosaic Communications that are building software tools to support electronic commerce on the Internet the international computer information network with an estimated 25m-30m users - have an established customer base.

are going to be best poised to create businesses in interactive digital services," says Jim Clark, chairman of Mosaic Communications, a venture that sells internet software. "Large companies are flocking on to the Internet because it has worldwide reach." he claims.

"The Internet is going to get bigger and bigger and bigger and the Microsoft Network will end up being a footnote. I think it will fail. In the long term it will become just another service on the Internet."

In the short term, however, Microsoft's plans are sending a chill through the commercial on-line services industry. CompuServe, Prodigy and America Online, the three leaders in consumer-oriented on-line services, which have about 6m subscribers, are scrambling to drop prices and upgrade their services in anticipation of the

Microsoft acknowledges that the perceived threat to established services may be overblown. "The notion that Microsoft enters the market and the world changes is crazy," says Miller. "From where I sit, we have a long way to go to match the infrastructure and customers and partners of the existing services." While Microsoft's entry will undoubtedly create new interest in on-line services, existing services "are going to have an advantage over us in terms of what

they can offer to customers". But for how long? With some 20m to 30m copies of Windows 95 expected to be sold in the first 12 months, Microsoft could quickly overtake all its competitors and fulfil Gates's vision of "extending the Windows-based desktop [personal computer] to a worldwide community of people, ideas and

Clive Cookson on an ambitious biotechnology network

Toolbox for genetic medicine

he most ambitions commercial network dedicated to research and development in genetic medicine so far was announced yesterday by Rhône-Poulenc Rorer, the Franco-American pharmaceutical

RPR has set up collaborations with 14 companies and academic research organisations in the US and France, to create what it says is "the world's first broad biotechnology network" in the related fields of gene therapy and cell therapy. At the same time it is establishing a new division, RPR Gencell, to co-ordinate the network.

Gene therapy involves treating disease by transferring new genetic material (DNA) to the patient's cells. Cell therapy means removing cells from the body and treating them with biological agents, such as growth factors, to increase their activity before returning them to the patient. The two techniques coincide in "ex vivo gene therapy", when DNA is added to cells removed temporarily from the body, to restore the function of a missing

or defective gene. "Cell and gene therapies offer the opportunity to cure disease at its origin, while improving quality of life, reducing healthcare costs and developing new preventive practices," says Robert Cawthorn, RPR chief

executive. "It is clear that a variety of technologies – a toolbox, if you will - are needed if we are to conquer diseases such as cancer Alzheimer's and cardiovascular disease, Our answer is RPR Gencell, an integrated network of external and internal scientists that will share the 'tools' and expertise necessary to build successful cell and gene therapeutics on an accelerated cimescale."

According to Thierry Soursac, general manager of RPR Gencell, the company has invested \$300m (£190m) over the past two years in setting up the network. RPR expects to spend about \$100m next year on R&D in gene and cell

Other international drug companies, such as Sandoz and Roche of Switzerland, Glaxo and SmithKline Beecham of the UK. and Kii Lilly of the US, have made substantial investments in external R&D though alliances with biotech companies and universities. But Soursac claims that the RPR network is hetter planned and more comprehensive

in its chosen field. "The others have less a network and more a succession of investments," he says. "We have built something from the ground up, with clear vision and

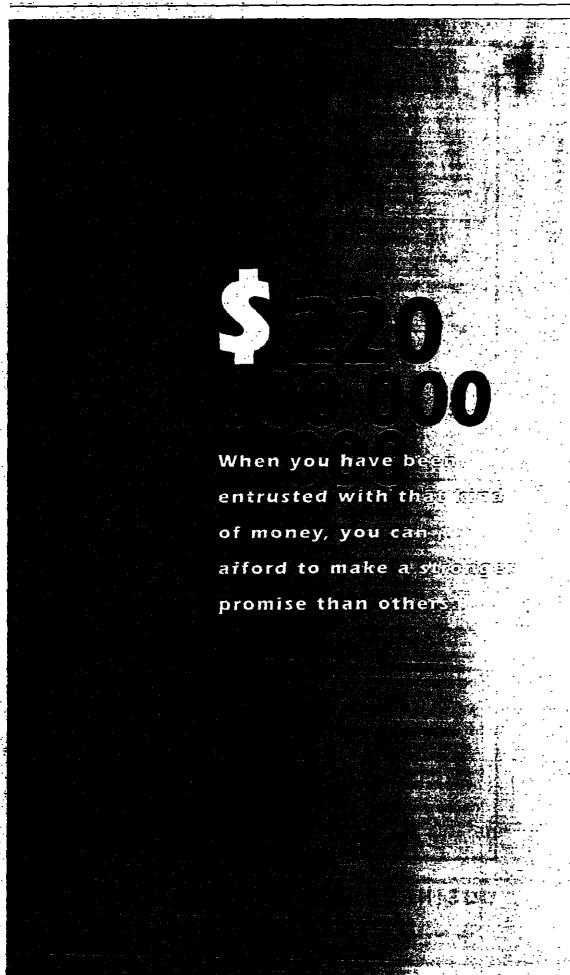

therapeutic focus." According to Soursac, RPR was able to set up its collaborations relatively inexpensively, without the huge up-front payments that some other drug companies have made to biotech partners, because its partners can see the benefits the network will bring them.

"For example, Ed Rubin (of the Lawrence Berkeley Laboratory Human Genome Centre, California] is floating on tens of millions of dollars [in grants from the US government's gene sequencing programmes)," Soursac says. "He doesn't need more money. What attracted him is the platform of technology offered by the club."

Rubin agrees that his centre is less interested in more funding than in using the RPR network to speed up the application of newly discovered genes, particularly those predisposing to cardiovascular (heart) disease. "We have good candidate genes," he says. "We need better tools to

deliver them to the patient." The experimental 'vectors' used to carry new genes into human cells include various viruses and tiny fat-like particles called liposomes. But there is also evidence that simply injecting the genes as 'naked DNA' can work well in some

The RPR network had six therapies in clinical trials, with two more trials about to start. The network will focus initially on cancer, cardiovascular disease and disorders of the central nervous system.

Go ahead Wou Can revon

Money talks. This figure testifies to the trust thousands of fund managers and Individuals have put in AXA Group companies, located in 16 countries, on three continents. Alliance Capital Management and Donaldson Lufkin & Jenrette, subsidiaries of The Equitable in the USA, and AXA Equity & Law in the UK are shining examples.

There are other revealing facts and figures about AXA. We are the fourth largest insurance group in the world, based on funds under management. And over the last 15 years AXA has multiplied its revenues 180 times, its profits 150 times, its equity capital 160 times and its funds under management

As you can see, we are as good at managing other people's money as we are at managing our own business. For us, the two go hand in hand.

So we are not speaking lightly when we say : "Go ahead. You can rely on us".

INSURANCE & INVESTMENT

MANAGEMENT: THE GROWING BUSINESS

Second-hand goods treated as new

Ian Hamilton Fazey looks at EU consumer product safety laws

T ew EU consumer protection and product force in the UK last month have introduced criminal penalties of which many UK companies are still unaware, according to the Institute of Export's legal

A statutory instrument amending UK company law came into effect on October 3, enforcing a 1992 directive from the Council of Ministers. The main thrust is to extend consumer protection and second-hand goods which were previously exempt. Second-hand goods are now

expected to perform as new. however illogical and unsound this may seem. The new law is enforceable throughout the EU by local trading standards officers.

"No one is sure how big the market is for reconditioned goods but it must be worth hundreds of millions of pounds domestically, says Michael Thornton, a partner in Laytons, the institute's solicitors. "The bulk of the trade is in white goods, brown goods

and teltronics."
There are some large and medium-sized companies supplying second-hand and reconditioned goods to world markets - eastern Europe and parts of the Third World are targets - but much of the trade is among hundreds of small businesses, often operating from poorly-sited, retail units long abandoned by high street traders. They repair and recondition

consumer durables such as refrigerators, microwave ovens, vacuum cleaners, lawnmowers. television sets, video recorders, cameras, and electronic equipment. Many are sole traders whose business has grown from doing local repairs.

"Our experience so far is that people haven't really thought about whether their commercial terms of trading still protect them," Thornton says. "If someone sells second-hand vacuum cleaners, he or she is now treated as a manufacturer of

primary goods. "Moreover, if they import their supplies into the EU already reconditioned, they are now

regarded under EU and UK law as their manufacturer."

Previously, no warranties applied to second-hand goods other than the normal ones under the Sale of Goods Act, which meant they had to be basically fit for the purpose for which they were sold. Thornton says a Warrington supplier of reconditioned white goods to Spain has already provided a

foretaste of what may be coming. Spain enforced the directive ahead of the UK but the owners of the Warrington company did not worry because they felt its BS5750 quality controls, coupled with a relatively high margin on many of its second-hand goods, would enable them to absorb the costs of putting faults right or giving people their money back.

But this proved optimistic once the second-hand goods could be treated by customers as though they had been bought brand new. The company has been forced into insolvency because the cost of rectifying comparatively few faults has wiped out its margin.

An additional aspect of the directive which is concerning lawyers is that manufacturers and suppliers must also worry about what use a product might be put to, even if it is far removed from

the purpose for which it was sold. Thornton says: "The seller now has to ask who is going to use these goods, or who might use them. Will this lead to liabilities over and above what they have been used to?"

The new regulations also allow the authorities – in the UK's case local trading standards officers to force a general recall of goods sold, with attendant publicity, if a recurring fault is found.

Prosecution is possible if a supplier fails to recall goods when ordered to do so. Trading standards officers will also be able to contribute details to a Europe-wide database as part of a trans-EU monitoring system.

Criminal sanctions now include three months' prison for guilty directors and senior managers and fines of up to £5,000 on summary conviction. The regulations are silent on penalties that might be imposed by higher courts for conviction on indictment.

year ago, Kenneth Clarke. chancellor of the exchequer, introduced three measures in his Budget that were designed to increase the flow of equity capital to small com-

The Enterprise Investment Scheme, Venture Capital Investment Trusts and extension of capital gains tax roll-over relief together represent one of the most concerted efforts to use fiscal incentives to coax life into young companies.

Small-business watchers described the Budget as "the best ever" for small business. But as the chancellor polishes his plans for another Budget on November 29. how have last year's measures affected small companies' ability to raise capital?

The answer is very little at the moment, as investors have been slow to come forward. Some accountants and intermediaries say the tax breaks are a well-intentioned attempt to address a shortage of early-stage finance, but that there must be changes if they are to be effective.

 Enterprise Investment Scheme. Intended to finance non-property-based trading companies, the EIS replaced the Business Expansion Scheme last December after the latter had become a vehicle almost exclusively used for assured ten-

ancy investment schemes.

The ghost of the 1980s property boom lives on in the new EIS rules. however. To prevent the growth of property-based schemes, the new rules require a qualifying company to have no more than 50 per cent of gross assets in land and buildings.

As John Orpen, partner at Coopers & Lybrand says, there are many companies, including small manufacturers, whose main asset is their building.

A number of EIS schemes

designed to finance perfectly legiti-mate trading companies have therefore fallen at this property hurdle; investors have been worried that if balance sheets weaken as a result of poor trading, they risk losing their EIS tax benefits by breaching this

Orpen believes speculation on property value inflation no longer figures in the minds of investors. The Enterprise Investment and Business Expansion Schemes Association agrees and has asked the chancellor in its Budget submission to drop the property rule.

There is also a problem of percep-tion. The most recent BES schemes were tax-driven. Now the EIS is addressing investors whose prime concern must be the prospects of the underlying business.

The 20 per cent up-front tax relief. down from 40 per cent under the most recent BES schemes, is not wildly exciting - sponsors will charge about 8 per cent to issue an

Wanted: a braver Budget

Richard Gourlay on why last year's moves to encourage more investment may have been too cautious

The uptake has consequently

been low. Where the government was expecting about £125m to be invested in EIS schemes this year. Tim Villiers, chairman of the EIBESA, says a fraction of this has been raised. "Jerry's Home Stores was quickly

over-subscribed but nothing else has raised its full subscription." Villiers says of the schemes. The EIS Company, a London-based consultancy, says only about a dozen schemes have been launched. Robert Lowe, director of Johnson

Fry, the largest sponsor of BES. says his company has launched no EIS schemes. "We don't think it makes sense for major sponsors, Lowe says. "What may be happening is that a sort of cottage industry is developing at a regional level with local accountants putting together deals. Maybe this is what was intended [by the government]".

 Capital gains tax roll-over relief. The most recent change to this law last November allows investors to shelter capital gains by reinvesting in a private trading

EIS prospectus, leaving a net tax company up to three years after the break of only 12 per cent. company up to three years after the gain is realised. Not only was the deferral of capi-

tal gains tax liability extended to cover the sale of almost any asset, the investor need now only re-invest the gain to receive the relief.

Orpen and other intermediaries believe roll-over relief could be the most significant of the chancellor's capital-raising instruments as there are no restrictions on the amounts that can be invested. Inevitably, tax-based products are

beginning to emerge. Johnson Fry has launched a scheme to raise up to £50m for Pioneer Oil and Gas, a private company that will buy North Sea assets already producing gas and oil and with proven reserves. Because investors are deferring their CGT liability, they are effectively receiving an interestfree loan from the Inland Revenue. It is within the new CGT roll-over relief rules, but it hardly constitutes support for capital-constrained trad-

• Venture Capital Investment Trusts. After months of listening to the pleas of the investment trust and venture capital communities.

the government is likely to produce new rules in the next finance bill. The most recent proposals suggested the VCITs would look like personal equity plans that invest in unquoted companies.

Much of the lobbying suggested

the VCITs would fail if the govern-ment did not raise the proposed maximum investment in each portfolio company from £1m and did not introduce some form of front-end or CGT roll-over relief. It is early days for all three

schemes. None of the schemes are well established - or well understood yet by investors. Furthermore, the stock market's recent performance has not encouraged investors to think of buying shares, let alone hold some of their portfolio in unquoted investments. No one expects the government to make sweeping changes in this year's budget. But the government

would appear to have erred too far on the side of caution, some small company observers say. Unless it listens to some of the criticism, the schemes may flush out only a minimal amount of expansion capital

GREEK EXPORTS S.A.

FOUNDED AND OWNED BY ETBA. SA.

ANNOUNCEMENT OF A SECOND REPEAT PUBLIC AUCTION FOR THE SALE OF THE ASSETS OF VIEL S.A. COATED ABRASIVES INDUSTRY, NOW UNDER SPECIAL LIQUIDATION

GREEK EXPORTS S.A., established in Athens at 17 Panepistimiou Street, in its capacity as liquidating company following decision No. 9583/1992 of the Athens Court of Appeal and in accordance with Article 46a of Law 1892/90 as complemented by Article 14 of Law 2000/91 and supplemented and amended by Article 53 of Law 2224/94 and within the framework of written instructions dated 20.9.1994 from ETBA S.A. (basic creditor and shareholder of VIEL S.A.)

a second repeat public auction for the highest bidder with sealed, binding offers for the purchase, as a whole, of the total assets of VIEL S.A.

BRIEF DESCRIPTION OF THE COMPANY

VIEL S.A. was established in 1981 (Govt. Gazette 2627/81) and set up a modern industrial unit for the production of coated abrasives in the Patras industrial estate on a plot of about 12,806m2. The factory has a surface area o 3,568 m2 and auxiliary buildings an area of 586m2. The basic machinery was built and installed by BRUCKNER of Germany and JGEL of Austria.

During the first months of liquidation the company was semi-operational. However, in April 1993, as a result of serious financial problems, the factory was closed and is now non-operational.

TERMS OF THE AUCTION

1. Interested parties are invited to receive from the Liquidator the Offering Memorandum and draft Letter of Guarantee in order to submit a sealed, binding offer to the notary public appointed to the auction, Mrs Andriani-Dimitra Zapheiropoulou-Economopoulou, 18 Voukourestiou St., 5th floor, Tel. +30-1-361.8249 up to Monday, 5th December 1994 up to 1400 hours.

Offers must be submitted in person or by a legally authorised representative.

Offers submitted beyond the stated time limit will not be accepted or considered. 2. The bids will be unsealed before the above-mentioned notary on Tuesday, 6th December 1994 at 1200 hours, with the Liquidator in attendance. Parties having submitted bids within the prescribed time limit are also authorised to attend.

period over which the payments are to be made at a fixed interest rate during the entire period of settlement). 4. Offers shall be null and void unless accompanied by a letter of guarantee from a bank legally operating in Greece. The letter will be valid until the signing of the contract and will be to the amount of fifty million drachwas (50,000,000) for VIEL S.A. - COATED ABRASIVES

3. The sealed, binding offers must clearly state the offered price and method of payment (cash or credit, the number of instalments, the time

5. The Company's assets and all fixed and circulating elements that comprise them, immovables, movables, claims, rights etc. are to be sold and transferred as is and where is, and, more specifically, in their actual and legal condition and location on the date on which the sale contract is signed, regardless of whether the Company is operating or not... 6. The Liquidator, the Company and the creditors representing 51% of the total claims against the Company (Law 1892/90, article 46a, para.

I as in force), shall bear no fiability for any legal or actual defects or for any deficiency in the particulars of the effects for sale or rights, nor for their incomplete or faulty description in the Offering Memorandum and in any correspondence. In the event of inconsistencies, entries in the Company's books, as they stand on the date of signature of the sale contract, shall prevail. 7. Prospective buyers, hereinafter referred to as Buyers, shall be obliged, on their own responsibility and due care, and by their own means and

at their own expense, to inspect the object of the sale and form their own judgement and declare in their bids that they are fully aware of the actual and legal condition of the assets for sale. The Buyers are hereby reminded that, in accordance with the provisions of the law, the Buyers, having agreed in writing to maintain confidentiality, may receive the Offering Memorandum and may have access to any information they may

8. Offers must not contain terms upon which their bindingness may depend or be vague with regard to the height of the amount offered or its method of payment or to any other essential matter affecting the sale.

9. On all points concerning the business plans of prospective buyers (job positions, height of investments, duration of operation, etc.) as well as on any other terms that may be agreed upon, the Buyer must accept clauses and other terms which will guarantee adherence to commitments. In order to guarantee payment of the amount on credit, the sale contract will contain a dissolution clause and first mortgage, or other guarantees (bank guarantee, etc.) to be considered adequate by the creditors.

10. The highest bidder is the one whose offer has been evaluated by the liquidator and judged by the creditors as being the most satisfactory. 11. In the event that the party to whom the assets for sale have been adjudicated fails in his obligation to appear and sign the relative contract within twenty (20) days of bring invited to do so by the Liquidator, and abide by the obligations contained in the present announcement, then the amount of the guarantee stated above is forficited to the Liquidator to cover expenses of all kinds, time spent and any real or paper loss suffered by himself and by the creditors with no obligation on his part to provide evidence of such loss or consider that the amount has been forfeited as a penalty clause, and collect it from the guaranter bank. Letters of guarantee accompanying the offers of other bidders, except the highest bidder, will be returned to them immediately after the adjudication of the auction.

12. The Liquidator bears no responsibility or obligation towards participants in the auction, both with regard to the drafting of the evaluation report on the bids or to his proposal of the highest bidder. Also he is not responsible and has no obligation to participants in the auction in the event of a cancellation or nullification of the auction for any cause or reason whatsoever.

13 Participants in the auction who have submitted bids do not acquire any right and can make no demand or claim on the strength of this announcement or of their participation, against the Liquidator or the creditors for any cause or reason.

14. The transfer expenses of the assets for sale (taxes, VAT charges on the value of the movables, stamp duty, notary fees and mortgagor fees, rights and other expenses for drawing up topographical diagrams as per Law 651/1977, etc) will be home by the buyer.

15 Participation in the auction implies acceptance of the terms of the present announcement.

BUSINESS AND THE LAW

Drugs imports advert ban upheld

pharmaceuticals imported from imported from other EU member countries was justreaty free movement rules, the

European Court of Justice ruled The Court said the ban was a restriction on internal market

trade which could be prohibited under the Rome treaty, but was justified on public health grounds. In the absence of Community harmonisation measures, there-fore, the ban benefited from the exception to the treaty prohibition

The Saarbrucken Landgericht had referred two questions on the interpretation of the Treaty free movement of goods rules to the

of free movement of goods restric-

The questions arose in the context of litigation between Lucien Ortscheit and Eurim-Pharm, two German pharmaceutical importers. Lucien Ortscheit sought an order that its competitor cease advertising foreign imports which had not been approved by the German authorities. Under German law, all pharmaceuticals, including imports, must be approved by the responsible Federal authority prior to marketing in Germany. But there is an exception for certain pharmaceuticals authorised in their country of origin which may be lawfully marketed when ordered by pharmacists in limited

quantities to supply prescriptions. The advertising of this specific category of imports is prohibited by the German law (Heilmittelucerbegesetz) relied on by Lucien Ortscheit. Since April 1992, Eurim-Pharm had advertised in the professional medical press the availability of imported pharmaceuticals unauthorised in Germany.

The ECJ said the advertising ban was a restriction on the free movement of goods since it applied only to imports.

It did not affect the marketing of domestic products in the same way as imports originating in other member countries. Therefore, it could not escape the Rome treaty prohibition of restrictions on the free movement of goods.

In particular, the advertising ban could potentially restrict the volume of pharmaceutical imports

A German ban on concerned by depriving the market of information on their avail-

> On whether the ban was justified on public health grounds, the Court said it was covered by the treaty exception to the prohibition of import restrictions for a number of reasons. First, the treaty exception remained applicable in the field of production and marketing of pharmaceuticals insofar as Community harmonisation of national rules was incomplete. In particular, the 1992 directive (Directive 92/28/EEC) on the advertising of drugs for human use was not in force at the time material to the German dispute.

The ECJ then confirmed that public health was among the fore most interests protected by the exception to the treaty prohibition of free movement of goods restric tions. The Court said the member countries were free to decide the degree of health protection they provided subject to the limits imposed by the treaty. The exception, therefore, would apply only it there was no method less restrictive of trade than the advertising which was equally effective for its

It concluded that the advertising ban was necessary to prevent eva sion of the German pharmaceuti cal authorisation regime. Since there was not yet a Community approval system or reciprocal rec ognition of national authorisa tions, member countries were required by the 1965 pharmaceutical harmonisation directive (modi fied in 1989) only to permit the marketing of pharmaceuticals authorised by their responsible national authority.

The advertising ban was intended to maintain the exceptional character of the specific authorisation exception for imports so that the normal authorisation requirement would not be systematically evaded. If there was no such ban, there was a risk that manufacturers would obtain authorisation in member countries where standards were less strict, and then import the pharmaceuticals into Germany on the basis of orders resulting from advertising campaigns.

C-320/93, Lucien Ortscheit v Eurim-Pharm, ECJ 5CH, November

BRICK COURT CHAMBERS

High risk of a poor roposals published last month by the Securities and Investments Board, the City's chief regulator, for compensating people who took out a personal pension on poor advice were clearly designed to reduce the financial product risk of court battles on the issue. For individual victims of poor advice, the SIB scheme may well

have removed the need to sue. But

several of the life companies and

independent financial advisers.

which must foot the compensation

bill, are far from happy with the

scheme and some have consulted

lawvers about possibly mounting a

No life company has expressed

qualms about compensating those

wrongly advised by its direct sales

force or by a "tied agent" - a com-

pany which sells only the insurer's

policies. They are less sanguine

about liability for poor advice from

independent financial advisers

Life companies also believe others

have responsibilities to bear. First

among them is the government,

which promoted personal pensions with such enthusiasm. Second are

the occupational pension schemes

whose rules for calculating the

value of a lump sum which could be

transferred by someone moving to a

launched yet by insurance compa-

nies challenging SIB's proposals. Mr

Dominic Clarke, a partner of City

solicitors Herbert Smith, says

nobody wants to be the first to chal-

lenge the compensation scheme

because of the bad publicity it may

generate. But the potential for liti-

In theory the SIB proposals are

directed at the front line regulators,

such as the Personal Investment

Authority, which are supposed to

turn them into rules or guidance for

the life companies which they could

be penalised for not following. But

it is clear that the very status of the

proposals may be the subject of a

legal challenge. The SIB plan urges occupational

schemes to take back people who

have opted out of an occupational

pension scheme and to allow retro-

spective admission to those who

decided on poor advice not to join a

scheme in the first place. If scheme

trustees do not want to take people

back, the life company or IFA is

supposed to "top-up" the personal

pension so that, at retirement, the

benefits the occupational scheme

would have offered can be matched.

people who have left a company and

then transferred their occupational

pension entitlement to a personal

plan (where occupational schemes

are likely to be less keen to have

people back) - a top-up is also SIB's

preferred method of compensation.

Only where someone has already

gation is enormous

personal plan is open to challenge.

(IFAs) selling their products.

court challenge.

A legal challenge is likely to plans to compensate people badly advised on pensions, say Robert Rice and Alison Smith

retired would compensation be an immediate cash sum.

But, says Mr Clarke, if you take the case of a transferee who received poor advice from an IFA. his remedy in law would be an action for damages for negligence against the IFA - proceedings to which neither the trustees of an occupational scheme nor the life company would be party.

The SIB scheme is proposing a form of remedy for the loss suffered by victims of poor advice which has no apparent basis in law. The principle of a non-cash based compensation scheme may be sound, he says, but there is some doubt as to

whether it is enforceable in law. Mr Ian Cault, another Herbert Smith pensions partner, says it is not difficult to see the potential for conflict between occupational scheme trustees and life companies.

The big questions are under what circumstances will trustees allow reinstatement of those who opted out, and on what terms? If schemes prove reluctant to have people back life companies and advisers are going to be left holding the baby. This could be particularly hard

for mutuals, (building societies), which sold through IFAs who will be left with no alternative but to dip into reserves set aside for "with-profits" policyholders to meet the costs of top-ups. In life companies, the burden of paying for top-ups will fall on shareholders. Neither group is likely to be happy with this prospect and both may decide to sue the company or its directors for negligence or for breach of fiduciary duty.

That may force life companies into pre-emptive defensive legal action, not in the belief they can escape without contributing to compensation altogether, but to establish that the company had no option but to contribute, thus protecting it from challenge by its own policyholders or shareholders.

ut the most difficult and immediate questions relate to policies sold by IPAs. Here, says Mr Clarke, there is a potentional for dispute in almost all cases.

The expectation is that where the business was sold through an IFA. the IFA will foot the bill because it gave the poor advice. The SIB scheme envisages IFAs relying on their professional indemnity insur-

ance to meet compensation claims. But professional indemnity cover can often be lost if a firm makes a settlement or admits liability to a client without the agreement of its insurer. Or the IFA may have received misleading marketing

information from the life company which it relied on in selling the personal pension. So there is significant potential for litigation between professional indemnity insurers, life companies and IFAs.

The life companies' most aggressive noises, however, relate to the payment of compensation for wrongly-advised clients of independent advisers which have already gone out of business or which do so in the course of reviewing their potential liability for poor advice.

This may end up being a rela-tively small part of the total compensation bill - which some esti-mates put at about £2bn - but the very uncertainty increases the inclination to consider legal action.

In the usual way, the bill for such compensation would be met by the Investors' Compensation Scheme, which is funded by the financial services industry. The retail financial services sector - where the personal investment authority is the main regulator - would be expected to foot the bill for compensating clients of companies which have gone out of business in its own sector, up to an annual limit of £100m.

There is a formula for assessing how the ICS bill each year should be divided within the sector, but the SIB plan deliberately failed to provide a formula for dividing costs for

PEOPLE

personal pension claims after next

£ Meretine Italian

spring.
BAT Industries, which owns. insurers Allied Dunbar and Eagle Star, said this month it would consider legal action against the SIB if life companies which operate mainly through a direct sales force, as it does, were made to contribute towards compensating clients of for-mer independent advisers.

Another potential area of challenge would be if other businesses within the retail financial services sector - such as unit trust companies - found themselves drawn into the compensation arrangements through paying levies to the linestors' Compensation Scheme simply as a result of being in the same sector, even though they had not sold any pensions at all.

Mr John Pearson, a pensions partner of City solicitors Lovell White Durrant, believes a note of realism needs to be struck, however. All the dire predictions about the total compensation bill assume that most investors will be able to establish liability by a life company or an IFA. But this may be harder than it looks, he says.
For an investor to succeed in

proving an entitlement to compensation, he or she will have to show: first, that the poor advice amounted to a material compliance fault under the regulations in force at the time; second, that the investor suffered actual or prospective loss; and third, that the loss was a result of the compliance default.

The assumption, he says, is that if an investor can prove the first two elements the third will follow gutomatically. But in many cases that is not at all certain. Amid the talk about legal action,

two points of realism are already coming through.

The first is that the probability of

a challenge to the SIB's proposals is directly related to the likely size of the compensation bill, and how quickly the amount is known. The bad publicity and costs of a legal action to resist contributing to

compensation for pension victims are easier to justify the higher and more uncertain the potential payments involved. The second point is that even if

the law is unclear now about the ability of life companies to contribute towards compensating the clients of others, the prospects of a successful and effective legal challenge by a life company may be slight. One life company chief executive explained why he put no faith in a legal action: "If there is any doubt, the government will simply make sure that the law is clarified so that we can contribute," he said. IFAs may have less qualms about

litigating, however, particularly if the alternative is bankruptcy. Either way the lawyers are agree a legal challenge is inevitable.

ALUMIX S.P.A

THERMO-ELECTRIC POWER PLANT OF FUSINA (VENICE - ITALY) FOR SALE BY TENDER

ALUMIX S.P.A. ("ALUMIX"), a company operating in the aluminium industry with a number of production plants located in several Italian regions, intends to proceed with the sale of the thermoelectric power plant of Fusina (the "Fusina power plant") based in Porto Marghera, Venice, in accordance with its production restructuring programme.

The Fusina power plant is located on 93,000 sq. m. of land, 5,700 sq.m of which are occupied by the plant, and it is divided into two separate lots, one of which includes a sea water intake (lacoon).

The plant, which was shut down in 1983 after 135,000 hours of operation, is in good condition as pertified by an in-depth study carried out by a specialist consultancy.

On 29 July 1992, ALUMIX was granted all the necessary permits for the rehabilitation and expansion of the plant. This includes the installation of a gas turbine of 299 MWt and 94 MWe and the use of a recovery boller to feed the existing steam turbines, capable of producing an additional 50 MWe with an overall electric power maximum output of 144 MWe (electric power only) and capacity for other industrial uses such as co-ceneration.

Potential buyers may purchase plots of land in addition to the existing site to allow the set up of new production facilities to absorb the thermal energy produced by the co-generation plant.

ALUMIX has appointed FIDIMI CONSULTING (IMI GROUP) to assist in the proposed sale of the Fusina power plant. Accordingly, interested parties should make written request for the Information Memorandum on the Fusina power plant within 15 days of this announcement to:

FIDIMI CONSULTING S.p.A., Via Sicilia 66, 00187 - Rome, Italy, attention Mr. Giuseppe Tucci; tel. +39 6 445 7341. Fax +39 6.445 7077; or SIGECO (UK) Ltd., IMI House, 8 Laurence Pountney Hill, London EC4R OBE, attention Mr. Mario Cotto; tel +44 71 283 6264. Fax +44 71 623 1323.

ALUMIX reserves the right to select at its own discretion the parties with whom it will negotiate the sale of the business. Prior to receipt of the information memorandum and of an outline of the procedure for sale, eligible bidders will be required to enter into a confidentiality agreement which should be received by Fidiral Consulting or Sigeco UK within 30 days from the date of this notice. inquiries by brokers and agents will not be accepted.

Neither this announcement nor the receipt of any offers by ALUMIX will create any obligation or commitment to sell to any bidder nor give any right to require any performance on the part of

Iveson quits MMB and returns to the north

Alan Iveson, managing director of the Milk Marketing Board until its abolition on November 1, has become chief executive of Teesside Training and Enterorise Council.

Iveson, 43, spent 21 years with the MMB; as md of the 61-year-old business was responsible for a £2b annual turnover.

He says he could have remained within the dairy sec-

tor but decided to opt for a change by moving to the Tec. "it's an opportunity to make a direct contribution to the improvement of the local community," he says.

big player like that," says Iveson, who sees scope for promoting a greater team approach between the area's employers. local authorities, educational Bebb quits

Senior board David Bebb is resigning from the board of Senior Engineering and leaving the tubular products, ducting and thermal engineering company after 32 years.

The announcement comes less than a month after Senior issued a profits warning because of cost over-runs on a significant UK contract, and a shortfall in orders, in its thermal engineering division which Bebb ran for four years until this summer.

Then Kevin Gamble, who runs Senior's construction

services division, assumed the additional responsibility for thermal engineering, and Bebb, an Australian, was put in charge of developing Senior's Asia Pacific interests. Andrew Baxter

Cheung seeks further Fortune

Barry Cheung - the new man at the helm of Fortune Oil, the London listed oil company that has just completed its first joint venture in Chlua - may be worth watching. He peppers his conversation

with jargon about strategic perspective and streamlining Fortune's board: words to gratify a management school (he has a Harvard MBA and is an ex-McKinsey consultant), but which conceal a nuts-and-bolts attitude and solid understand. ing of running a company spanning two countries and cultures.

Cheung, 36, was born in Hong Kong to which his parents had emigrated from the northern Chinese provinces of Hubei and Shandong, and educated at Sussex University. He spent many years living in the UK and Los Angeles and car-

ries a US passport. However, he recently made his first ever trip to Beijing - and says it felt like going home.

A former member of the Central Policy Unit, a Hong Kong government think tank, Cheung nevertheless reels off a string of criticisms of the colony's government. He questions

an educational system that produces students proficient in neither English nor Cantonese, and says Hong Kong's disputed port extension may turn out to be a white elephant.

But his commitment to local culture appears rock solid. His children attend Chinese schools, rather than the international institutions favoured by expatriates and Chinese who have lived overseas.

Less than a month after Cheung took over as chief executive, Fortune has just completed a \$25m single point mooring oil terminal in Maoming which will enable the local oil refinery to increase its capacity substantially. It is the company's first joint venture in the world's third largest economy and Cheung is confident that it is just the first of many. Louise Lucas

Project. ■ David Ritchie, deputy group executive, is also appointed chairman, and Leslie Robb md. of SCOTTISH WIDOWS Investment Management.

■ Monique Nooy has been appointed a European marketing director at FOREIGN & COLONIAL; she moves from Pictet. Steven Bobasch, formerly

director and deputy head of group credit at Kleinwort Benson, has been appointed head of credit at SOCIETE GENERALE's London branch.

Ashton celebrated

Clement Crisp reviews the Royal Ballet

n the weeks leading up to Christmas, the Royal Ballet is offering two programmes of ballets by Sir Frederick Ashton, with the added seasonal pleasure of his Cinderella. This is a first and over-due celebration of the work of the man whose creations vitally shaped our national style of classic dance. Ashton was a genius. First Marie Rambert, then Ninette

a terrain

de Valois gave him his earliest chances, and de Valois - prescient as ever - entrusted him with the role of chief choreographer to her company in 1935. From that moment on he made ballets which can be seen as an ascending curve of imaginative brilliance, craft and poetic sen-

I have been fortunate enough to see much of his work with its first casts. (Ashton was often indifferent to dancers who took over roles, and could make such devastating comments as "She's not chic" by which he meant wit in tech-

nique and manner). His maturity as a choreographer came after the war. For the next three decades he made ballets whose variety and felicity of means were central to the Royal Ballet's identity.

He took on the mantle of Petipa and gave us Cinderella, the delicious and shamefully neglected Sylvia, the tragic Ondine, the sunburst of La Fille mai gardée, and the romance of The Two Pigeons. He explored Fonteyn's gifts in role after role. He could evoke Greek myth in the mysterious Persephone and Daphnis and Chloe, and extract the essence from a drama to make a work as emotionally succinct as Month in the Country. He could be hugely and subtly funny in A Wedding Bouquet, and very moving through no less subtle means in Lament of the Waves. He could make dance glitter one of his own favourite works was the sublime theorem of Scènes de ballet - and make his dancers opulent, grand, in Birthday Offerina.

on music, and on qualities he sensed in his interpreters hence his lack of much interest in their successors. His ballets remain the truest portrait of his company for much of its existence. So now, somewhat belatedly, the Royal Ballet makes an Ashton homage. A stage shared with opera precludes the celebrations that New York City Ballet gave in last spring's showing of 73 Balanchine works. But I made a tally of some 30 Ashton pieces which should be in the repertory. A national ballet owes this to its dancers and audiences: the Ashton heritage is no less important than, say, the works of Benjamin Britten,

and Ashton must be accounted

one of our greatest lyric poets.

Thursday night's first pro-

gramme brought a revival and re-decoration of Daphnis and Chloe, the return of La Valse and Symphonic Variations, and duets from Sylvia and Birthday Offering, works spanning 12 great Ashtonian years, 1946-58. The evening was the victim of injuries: four principals, among others, were replaced. It is for this reason that I am reluctant to say much about Symphonic Varia-tions, which looked studied rather than spontaneous. Because this work has been elevated to the status of a sacred text, it is too often danced as if its cast were in church. Bruce Sansom in the leading male role was fine: the rest of the cast looked tentative. They might adopt some of the freedom and sense of giving themselves to the pulse of the music which made the opening La Valse look so handsome as Ravel's whirlwind bore its couples along.

The two pas de deux made me long for the entire ballets from which they were extracted. Birthday Offering was, in 1966, a loving portrait of the company's seven ballerinas in the year of its silver jubilee. (I wish I thought that the present troupe could field

Above all, his creativity fed seven such varied and fascinating artists). At the heart of it, of course, Margot Fonteyn and her cavalier, Michael Somes. On Thursday, Lesley Collier and Jonathan Cope gave the duet its proper grace. Collier has wit and the proper understanding of Ashtonian nuance. and Cope is a handsome partner: the piece was alive.

> Ashton's most brilliant and demanding creations for Fon-teyn and Somes - did not look happy with Viviana Durante and Irek Mukhamedov. Mukhamedov has the power the dance needs, though he makes it seem more Bolshoi-like than heretofore. Durante seemed flustered by intricacies that Ponteyn played with a delicious and understated amusement in what Ashton had set her to do. But the duet whets the appetite: we really must have the whole ballet restored to the stage with its ravishing designs by the Ironside

has been long over-due for return. Now it is back, with new design by Martyn Bainbridge replacing John Craxton's original decoration. The initial impression of Bainbridge's work is excellent. His permanent set is of creamy stone walls with a distant landscape shimmering through horizontal lines which mask the backdrop. The costuming is timeless yet suitably archaic, in natural-coloured linen and wool for the villagers, rather more conventionally piratical for Bryaxis and his crew. I think it a miscalculation to use an obviously theatrical moon and tinselly stars for the pirate scene, and to make the last act sea like a dowager's sequinned bosom glittering all-toobrightly in the morning light. These seem trumpery when contrasted with the earlier aptness of the design.

The Chloe of Trinidad Sevil-

Trinidad Sevilliano and Stuart Cassidy in 'Daphnis and Chloe'

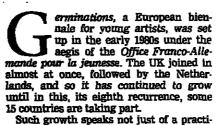

- a replacement for an injured Sarah Wildor - was deliciously soft in outline and tender in manner, and the character lived. So did Stuart Cassidy's Daphnis, happily combining innocence and passion. Lykanion and Dorkon, who must tempt the young lov-

ers, were given first sketches by Benazir Hussein and Adam Cooper, but the pirate Bryaxis needs a far weightier presence than Matthew Hart's physique can bring - the part cries out for Mukhamedov. This is, nonetheless, a welcome revival. Let it be the precursor

of much more Ashton - and MacMillan - restored to the stage: their work is our national ballet's treasure, and identity.

Daphnis and Chloe spousored by the Robert Gavron Charita-

Breda hosts the art of youth

Such growth speaks not just of a practical success, but of a wider recognition of the cultural and educational opportunity that Germinations represents. The arguments make themselves: the focus upon youth and education; pan-european co-operation extending across the community into the former communist bloc; all the cultural opportunities that follow, of mutual experience and exchange.

Yet what the European Commission giveth, the European Commission taketh away, and this time, late in the day, the funding was withdrawn. To criticise this Breda Germinations for the absence of those workshop programmes, whereby participating artists from different countries would have been given the chance to work abroad together at selected centres in the months before the actual exhibition, is therefore no criticism of Germinations itself. The point was acknowledged by the administration, and confirmed by the art-

ists, who certainly felt deprived. The immediate reinstatement of these workshops is already the declared priority for Germinations 9. Where the money will come from, however - the Commission; the national funding bodies: private spon-

sorship? - is unclear. The pity is that the sums are still comparatively small. Has Germinations itself become too big?

Sixty-four artists are represented, a handful from each country which inevitably blurs what might be national characteristics into individual quirks and interests. With funding secure, would a more frequent programme be better, allowing a reduced and rolling permutation of the member nations rather than all aboard, every time? Perhaps.

The work itself is what is to be expected

William Packer reviews the European biennale show. 'Germinations'

of any recent student generation, an avant-garde orthodoxy in both range of practice and content. There is enough here of the beautiful, intriguing and well-made to remain encouraged. It is only the narrowness of the range of preoccupation, the stultifying assumption that art must be idea-led rather than more intuitively

responsive to the world, that is so sad. Here, then, are some film and video, some print, installations, both conceptual and theatrical, and a lot of well-made abstract sculpture. There is also some painting on canvas, almost all of it abstract and some of it very good. Such is the currency of art schools, not just in the UK but across Europe. But for anything

direct and competent in its relation to nature, most of all to the figure, we look in vain. What little there is of figurative representation is embarrassingly inept.

That said, however, I would also say that the British contingent of eight artists was as strong as any, ranging from painting, through sculpture, to conceptual installation. Two of the painters were out standing - Lynn Flavell with her elegantly abstracted pattern-fields derived from piles of fruit; and Sophie Benson, whose large, delicately worked and spatially ambiguous drawings deservedly won her the special bursary. The sculptor too, Naomi Dines, had made some quite extraordinary things. She is obsessed by tack and tackle of all kinds, as might be found on boats or horses, or in the surgery - odd splints, supports, restraints, all beautifully made in leather and hung with an off-hand deliberation upon the wall. Of the rest I liked the sinister chair-figures of Klara Klose (Czech), Catherine Harang's metal structures (France), Petra Ondreickova's painted relief perspective (Czech) and Katarina Diacomi's prawn-like wire creatures, dancing on springs. Barbara Kowalczyk (Poland), with her parcels of pigment on shelves and window-sills, won the Boudaille Prize as best artist in the show.

Germinations & the St Joost Academy and the De Beyerd Contemporary Art Centre, Breda, The Netherlands, until December 4. Supported by the Commission of the European Community, Brussels, and by individual national organisations.

Music in London

Schnittke Series

n this, his 60th birthday, Alfred Schnittke's position as the natural successor to Shostakovich as Russia's leading composer seems unassailable. Schnittke festivals are on the increase, his discography is - for a serious contemporary composer massive, and his rate of production - especially given his precarious state of health and his need to make statements on a large scale - shows no sign of dwindling. For his admirers, he is as much moral inspiration as pure musician: they speak passionately of his work's overwhelming emo-tional intensity and of his giving voice in dark and dangerous times to the soul of an oppressed Russian people.

These are strong claims, but are they justified by the musical reality? Do the ends - the powerful communication of non-musical truths - justify the means? Can we turn a deaf ear to the relative crudity of Schnittke's techniques, not least his juxtapositions of avant-garde clichés and quotations from the whole gamut of musical history? Or should we expect more from a composer of his stature than a language in which the ideas behind the music are more important than the music itself, and in which the actual notes dissolve into a rhetoric whose only raison d'être seems to be dictated by the composer's own freely associating anxieties?

"Perhaps" and "sometimes" may be the answers, but not, I think, on the basis of the three Schnittke pieces given exemplary performances by the London Sinfonietta in the opening

concert of the Barbican Centre's Schnittke Series on Friday. The shortest, Three bu Seven, proved a slight, rather dry and schematic exchanges between harpsichord and instrumental ensemble.

The earliest, Quasi una sonata of 1987 for violin and chamber orchestra, a rework-ing of his Second Violin Sonata of 1968, was a typical head-on collision between sounds from the 1960s avant-garde and quotes from Beethoven and Brahms, which ignores the purely musical implications of its material in favour of hollow gestures and temper tantrums.

The most recent, Five Fragments on Pictures by Hierony mous Bosch, receiving its recourse to rudimentary melody-plus-chords textures, sounded dangerously undercomposed.

Ironically, it was the work of two of Schnittke's compatriots which offered the main musical interest of the evening. Life without Christmas - Daytime Prayers by Giya Kancheli was a gentle, Goreckian meditation for clarinet and ensemble. capped by the arrival of a boy soprano to sing a Latin prayer. More striking was Alexander Raskatov's Xenia, another delicate, meditative work, evolving logically from shimmering tintinnabulations and revealing a fine ear for subtle shifts of colour, new orchestral sonorities and some appealingly quirky changes of direction.

Antony Bye

The Schnittke Series continues at the Barbican Centre tonight

Chung conducts the Philharmonia

he London Philharmonic's concert at the Festival Hall on Saturday featured standard composers - Beethoven, Schumann and Brahms – in a standard overture-concerto-symphony format. All of the works complement perfectly the art on show at the South Bank's Deutsche Romantik exhibition, but only first-rate performances would have justified such a routine programme.

But then, the evening was to have been conducted by Klaus Tennstedt, the orchestra's conductor laureate and one of the great exponents of this repertory. His recent retirement du to ill-health from the concert platform is a not-unexpected blow to the orchestra, already in the process of losing its music director. Franz Welser-Möst.

Tennstedt was replaced on Saturday by Myung-Whun Chung, a relative stranger to London but one who had the conductor-watchers out in force: his ousting last month from his post as music director of the Opéra-Bastille in Paris makes him a possible candidate for either of London's rudderless orchestras (the job at the Philharmonia being open too). But perhaps our cashstarved orchestras will find him too expensive: on the surface of a complicated battle of artistic wills in Paris, it was Chung's financial demands that made him the first victim of cost-cutting measures by the Bastille's director-designate, Hugues Gall.

Chung has been an acknowl-

edged force for artistic good in Paris. He is widely credited with having raised the standards of the Bastille orchestra. but here - in works that demand the individual stamp of a conductor - he came across like any other generalised super-maestro. Uncharacteristically, he allowed some undisciplined playing in a per-formance of the Leonore No. 3 overture that did not really hang together coherently.

Schumann's Piano Concerto in A minor - the epitome of German Romanticism, or at least of its more wholesome aspects - was much more sucistul. Chung proved a se tive accompanist to Maurizio Pollini, and together they shaped a performance full of Romantic spontaneity but free of mannerism. Pollini's distinguished playing brought reminder - if reminder were needed - that he has few equals in this repertory. His virtuosity remains but one of the tools of his glowing, poetic

Tennstedt's absence was keenly felt in the Brahms Symphony No. 1. Chung conjured up an appropriately warm sound but no Brahmsian incandescence, and the playing lacked cultivation. The blazing, affirmative finale was impres sive, though not enough to make this an interpretation real stature - a commodity which, after recent experiences with its music director, the London Philharmonic should now be seeking above all.

riched bread; and a trade union federation's development fund: all are part of a new national mission in South Africa, the Reconstruction and Development Programme

With the death of both apartheld and the socialist vision of the African National Congress. the RDP is being promoted as the country's path to political stability and economic growth. It is now so powerful and pervasive a feature of South African life, that scarcely any large initiative, in the private or public sector, is launched without ritual reference to the

International donors talk of promoting the programme, the corporate sector spells out how its plans ge) with the RDP's goals, and educational institutions frame their mission in terms of developing the necessary human capital to implement the RDP.

However, behind this enthusiasm lies widespread confusion over exactly what the programme involves.

Most people would probably say the RDP was primarily a state-sponsored initiative to provide jobs and houses for the very poor - casting an eye at the R37.5bn over five years that the government has budgeted to promote everything from school feeding schemes to new water plants in rural

But important though these high-profile initiatives are. they are only part of a much larger programme. The white paper on the RDP, recently presented to parliament, sets out the programme's five broad goals as meeting basic needs, such as jobs, land and housing: developing human resources through education and training: promoting economic growth: completing the democratisation process; and establishing the government structure and capacity to implement

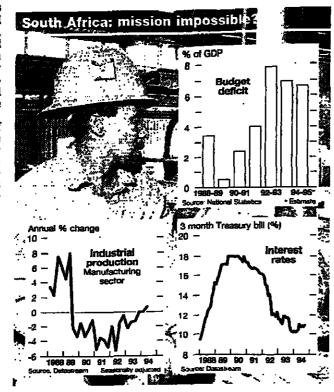

As Mr Jay Naidoo, the minister without portfolio who has the task of overseeing the programme, is fond of pointing out, the RDP is intended to do more than build a few extra schools and clinics.

It is not a set of ad hoc projects on the ground." he said last month. "It is not about government centralising power in its own hands. It is about the fundamental transformation of government and

The economic policies that are being adopted to meet

Statement of intent

Mark Suzman on Pretoria's ambitious economic programme

these aims have been widely applauded both domestically and abroad. Although the programme includes several stateled initiatives, the bulk of the RDP will be driven by the pri-

vate sector. The commitments to nationalisation and socialist policies that infused earlier drafts of the programme, when it was part of the ANC's electoral campaign, have been jettisoned. So, too, have the references, side-by-side, to free enterprise, frugality and high-

spending, inflationary policies. The ANC-led administration has instead committed itself to cutting the budget deficit, is pushing ahead with privatisation, and has proven highly supportive of the Reserve Bank's unpopular policy of high interest rates - aimed at keeping a rein on inflation. Indeed, the new government

has become so staunch a defender of economic discipline that it has been charged by some of its constituents with being too right wing. Deputy Finance Minister likely to prove impossible.

The world is talking

Alec Erwin's response to these charges has been that "fiscal and monetary discipline as an instrument to achieve objectives may mean that, like Iformer UK prime minister] Mrs Thatcher, we use a stove to cook a meal, but ours is a very different meal: it is one that we all will share and enjoy the quality of the cooking."

hopes for the gains from economic discipline are thought to be realistic by many observers, they worry that other elements of the RDP may not be. The white paper's commitment to increasing civil service productivity and cutting the number of state employees appears Herculean. A recent analysis by the Johannesburg-based Centre for Policy Studies concludes that. given the pressure on the government to deliver improved conditions and the difficulty of retrenching white bureaucrats, meeting these goals is

Even more problematic is the question of project implementation, dealt with only briefly in the white paper. Local authorities are to be given a management role in everything from the provision of houses to new schools. in practice, however, local government remains chaotic in much of the country as a result of widespread rent and service boycotts: establishing effective local government structures could take years.

The RDP at this stage is very abstract. It deals with the framework but not delivery." said Mr Frederik van Zyl Slabbert, responsible for the running of local government elections planned for next year,

It is the idealism that under lies the programme that seems to have generated this weakness, as well as the programme's strengths.

The RDP is essentially a revolutionary plan drawn up by a new government with a burning vision of the country it wants to build, and a strong desire to deliver tangible results from the destruction of apartheid: hence the broad scope of the RDP, and its adoption as a national crusade by all the political parties in government.

Rather than being a policy document over which political opponents disagree, the RDP has become a statement of aims within which most policy disputes are taking place. Thus the debate on interest rates is framed as a discussion over whether higher interest rates will promote the RDP.

The same is true in business. During a recent car industry strike, employers defended their low wage offers as necessary to free funds for capital expenditure in support of the RDP, while workers' organisations argued that under the RDP they should be receiving improved training and better conditions.

The programme's elevation to national mission has also raised the prospect that those who stray from its premises will be purged. There have already been calls for various senior civil servants to be dismissed for being "anti-RDP"; an official at the Development Bank of South Africa was fired following charges that he tried to sabotage the programme.

However, the government seems under no illusions about what will ultimately determine the success of the RDP. It is economic growth that will make or break the programme. The danger will lie in trying to deliver too much too

Virtually real democracy

at home, your hand near the remote control device A convicted murderer's face appears on the

screen. top right corner. A voice asks whether the miscreant should or should not be executed. The text alongside reinforces the spoken message: "To have your say, simply press Y or N." The unpleasant details of the killing, some recreated by computer imagery, have just been replayed for what seems like the thousandth time. You are reminded that if the public-access vote is "Y" the supreme penalty will be exacted, in full view, just after the dinner

hour. You reach across your

snack tray and pick up the The above little scene, some may protest, is a sub-Orwellian nightmare, unworthy of serious attention. Oh yes? Even in California? Sophisticated folk like us know that true democracy is a nonsense. It is the rule of the mob. Elites - that is, you and I - manage to stave off the mindless tyranny of the majority by a variety of means. the most effective of which is the pretence that periodic elections decide matters of importance. Modern government,

even in its minimalist form, is

so complicated that it would be

impossible to consult the voters at every turn. Not so. Technology that could make the largest of countries function like a parish meeting already exists. In its most advanced form - a multimedia box connected by telephone line to everywhere - the necessary gadgetry is likely to become commonplace in middle-class homes by, shall we say, the turn of the century. Mr Bill Gates, chairman of Microsoft, indicated yesterday

that his company proposes to

in touch with catalogues. purveyors of financial snake-oil. electronic libraries, and that great stimulant of so many of our imaginations, the Internet. Mr Gates has made a huge success of Windows, the program that enables newcomers to understand computers. He might do well with his Microsoft Network.

It is not evident that he has political applications in mind, but that makes no difference. Politics is already entwined in the Net. In the 1992 presidential election Mr Ross Perot promised electronic plebiscites. Last year President Bill Clin-

tronic town hall", aithough without voting rights. His vice-president is starry eyed whole business. If you have the necessary hardware you may

ton stage-man-

aged an "elec-

virtual reality = tour of the White House. Sophisticated chip-based devices were deployed in last week's mid-term elections, the ones in which the Democrats were so thoroughly worsted. In Minnesota candidates for the Senate conducted an on-line debate. Computer-access public interest groups have been established in Oregon, Ohio, Illinois, Florida and elsewhere. They are available on the World Wide Web, which can transmit text, moving pictures

and sound. In California, nearly every candidate spent part of his or her campaign funds on digitising their messages. A nasty proposition, number 187, was overwhelmingly approved. It denies public services to illegal immigrants. Last year some supported

present at executions. Software companies have invented ways of identifying electors at their home screens, although it is not clear how this kind of electronically screened vote could be kept secret. Yet add it all up and my opening paragraph becomes less fanciful. Wired democracy is a popular notion. No wonder Mr Newt Gingrich, leader of the Republicans in the lower house, remarked after his party's recent victory that every bill or committee report filed in Washington

would be put on line. It is important to keep hold of actual reality. Browsing

through Profile, the FT's Technology that on-line library, I read that could make the some 20-30m largest of personal comcountries puters, in at least half the function like world's couna parish tries, linked to the meeting already Internet. Yet exists advanced tech-

> nology is probably possessed by say, between 2m and 3m PC owners. That probably defines the number of Americans who logged on to candidates' literature during the mid-term elections. Could it be that the Net is just another device for whiling away the long night hours? We have waves of the future come and go; none has yet drowned us. Satellite TV. cable, fibre-optics, the fax, the cordless telephone have been subsumed into our lives; none has

> become predominant. That said, I am not so sure that the gathering wave of "electronic democracy" will recede. Voters everywhere are disillusioned with established parties and politicians. The temptation to travel back to ancient Athens via one of Mr Gates's icons may be irresist-

You are sitting sell software that puts buyers attempts to have TV cameras fible. In Britain various think tanks and pressure groups have worried at the edges of the problem, without reaching much of a conclusion Lean Democracy, a pamphlet published by Demos in the summer, discusses participatory models of wired decision making. "It is likely to take many years of experiment ... to discover which methods of using technology entail which effects." the prudent authors

foreign ridlock

A discussion on referendums organised by Charter 88 a few weeks back could be summarised as concluding that they are all right if limited to constitutional issues or local matters. Demos. Charter 88 and the Labour-leaning Institute for Public Policy Research have all discussed cifizens juries, groups of public spirited to sit and listen to professionals before pronouncing on the merits of this or that policy. The IPPR booklet, Citizens Juries, by John Stewart, Elizabeth Kendall and Anna Coote was published last Thursday, It describes experiments in the US and Germany and proposes a trial rum in Britain.

Why not? An electronic referendum is a dangerous idea. Voters would decide on the basis of no knowledge, and flashy sound-bites. The poor may not have access to computers. Putting a citizens' jury on TV or an interactive net might be more attractive, if you could be certain that the participants paid attention. Meanwhile, we should think. The first picture of an Apple PC in the FT appeared in the late 1970s. It showed a child at the screen. Now grown up, she has presented me with a subscription to the Internet. That is how far home computing has travelled in about 16 years. We will experience the politics of this device well before another

The worst of all worlds

From Mr Oleh Havrylyshyn. Sir. In his article "Painful rebirth from the ashes" (November 11), Anthony Robinson makes some valuable points about how much has been achieved by former communist countries in the transition from central planning to market economy, and how this is already giving pay-offs. It is useful to have such a "half-full glass" perspective on the still difficult process

these countries. However, I would take issue with Robinson's too-simple analogy between the capital amassed there in recent years through "often clandestine expropriation and export of raw materials, energy and other resources" and the US equivalents in the 19th cen-

The 19th century monopolists did not, on the whole, make their fortunes with the help of a highly interventionist government. US and European economies, while not paragons of free markets, were generally open, competitive economies. with free price-setting, very low government budgets (generally balanced) and a prudent money-creation environment. The transition economy robber barons base their profits on privileged access to low-priced materials, substantial and cheap credits, trade licenses (hence monopoly rights), and so on. The big difference therefore is that today's robber barons have become strong propo-

nents of retaining the

administered and distorted system that is neither central planning nor an open competi-tive market. For them, this is the best of both worlds, and they have plenty of influence to try to keep things that way. For the population at large, this partial step to the market is the worst of both worlds.

It will not automatically happen that the accumulated capital (much of it abroad) will be reinvested in these economies It will require a strong-willed leadership to break the system of interventions, create a competitive, open-market environment - and thereby attract back this amassed capital. Oleh Havrylyshyn,

alternative executive director, International Monetary Fund. Washington DC 20431, US

and European robber baron Bureaucracy in Brussels

From Mr Paul Cohn.
Sir, Having read the article
by Emma Tucker about her experiences with Brussels bureaucracy (Perspectives: 'Welcome to Soviet Belgium'', November 12/13), I can only feel sorry for her.

However, being a Dutchman, who has lived in Germany. France, Belgium and the UK. I regret that my experiences with the authorities in the UK were by far the worst. This starts when you enter the UK and your car is thoroughly searched for an hour (although I have short hair), and it continues when you want to have a residence permit. Maybe having an Indonesian wife does not help, but I have never felt as humiliated as when I waited in a queue outside the Home Office in Croydon at 6am after a 21/2 hour drive ~ only to be told several hours later that I should have gone to my local police station, which had just sent me to Croydon the day

So, not much different from Paul Cohn,

Singel 19. Blaricum, The Netherlands

Greenpeace: a changing role, but not out of a job

Sir. In her long article, "Campaigners all at sea" (November 12/13). Bronwen Maddox says Greenpeace has "campaigned itself out of a job", because it has achieved extraordinary success in changing the relationship between advanced industrial societies and the natural world". Sadly, we have to dis-

The "success" has been mainly confined to the establishment of political conventions and increased understanding - attitudes have changed but activities mostly have not. For the media the global environmental crisis has perhaps been eclipsed by the "environmental revolution" in the attitude of politicians and industrial public relations but this is change in appearances, not substance.

Maddox cites the London convention on radioactive waste dumping, but Sellafield still pumps waste out to sea from land. Toxic waste dumping at sea has been banned Yet waste is still legally dis-charged from land, dumped on land or incinerated. And, as London Ni 2PN

she says, 150 countries acknowledged global warming at the Rio Earth Summit yet carbon dioxide emissions are

still set to rise. There is no international treaty to protect forests, even on paper: we are taking direct action to stop the Brazilian mahogany trade. The Montreal Protocol on protection of the ozone layer was incapable of forcing industry to adopt technologies that did not use ozone destroying or global warming gases. This led Greenpeace to intervene in the market with "greenfreeze" refrigeration, instead of continuing to rely on the media and government

instruments to deliver change. Maddox fairly describes some of the problems faced by environmental organisations in a more environmentally-aware world: we must change role from mainly identifying problems to delivering change. But our task is to stop destruction. not just to draw attention to its most visible forms. Chris Rose,

campaign programme director, Greenpeace UK, Canonbury Villas.

savines.

From Ms Esther Knight. Sir, I refer to the article "Grants are the remedy for the region's needs" (November 7). This stated that, concerning eligibility for European Regional Development Fund. Telford and Stoke-on-Trent were not deemed to be in need any longer". This is not correct. The position is that Telford was previously eligible and continues to be so, and that North Staffordshire conurbation, including part of Stokeon-Trent, has obtained eligibility for the first time. Esther Knight, European policy officer, Staffordshire County Council. County Building, Martin Street,

Stafford ST16 2LE

Marginalisation of Mediterranean countries mention of Europe's challenges

From Mr Stephen C Calleya. Sir, Your assessment of Europe's future challenge in your editorial, "Europe's big challenge" (November 9), is accurate in indicating that the EU 1996 intergovernmental conference must contend with the assignment of furthering the integration experiment in the west and simultaneously spell out a plan for integrating the states of eastern and central Europe.

But it surprisingly makes no

on its southern flank. An analysis of the EU's recent document. Strengthening the Mediterranean Policy of the EU: Establishing a Euro-Mediterranean Partnership, which proposes the creation of a free trade zone in the area, and a review of EU enlargement to include either Malta, Cyprus or

Turkey, are absent. For the record, the EU now gives twice as much aid to eastern Europe as to the Medi-

terranean. In the period 1990-1994, the EU spent Ecu 1.626bn (\$2.07bn) on the Mediterranean and Ecu 3.781bn on eastern Europe. Is this an indication of grad-

ual marginalisation by Brussels of the Mediterranean despite lip-service to the con-Stephen C Calleya,

Foreign policy gridlock

The first reaction of some Clinton supporters last week, when the Democrats lost control of both houses of Congress, was to suggest that from now on the president would concentrate on foreign policy, which has come to be seen

as his greatest strength.

That in itself is a remarkable development. Bill Clinton won the presidency two years ago by arguing that his predecessor spent too much time on foreign policy and not enough on America's domestic problems. For most of the time since he has been portrayed as hopelessly inept and indecisive in foreign policy. Only lately, as his domestic programme ground to a halt, has his foreign policy performance, notably in Korea, Haiti and the Middle East, begun to look a little better.

It is also true that the balance of powers between president and congress is more favourable to the former in foreign than in domestic policy. But that is not saying much. Foreign policy involves spending money, and the president cannot spend money, even abroad, without congressional authority. The world was abruptly reminded of this last week when Mr Clinton had to end US participation in the enforcement of the arms embargo on Bosnia: an action which might make sense if it were part of an overall strategy to help the Bosnian government achieve military victory, but which in the present context serves only to destroy a very delicate consensus among the leading powers that took well over a year

to reach, and in the process badly

undermines what is left of the Atlantic alliance

The president also has to obtain the consent of the Senate for his nominations to ambassadorial posts and other senior positions in the state and defence departments (though not in the National Security Councili. His Republican predecessors often had difficulty with this, not from Democrats but from a fellow Republican. Senator Jesse Helms, who regards the entire foreign service as a bunch of liberal elitists, and who is a master of the art of procedural delay.

Mr Helms is deeply suspicious of almost all forms of US engagement with the rest of the world, especially those (such as the Uruguay Round) that take a multilateral form and require the US to abide by rules that other countries have a role in setting and administering. He describes the United Nations as "that long-time neme-

sis of millions of Americans ... which costs the American taxpayers billions of dollars". He is against virtually all foreign aid. except aid to Israel. He even disapproves of efforts to make peace between Israel and Syria, since for him it is axiomatic that Syria's desire for peace cannot be sincere.

Come January, Mr Helms will be chairman of the Senate foreign relations committee. Mr Clinton's freedom of action to pursue any foreign policy of his own will from then on be severely constrained. Those who rely on US leadership and commitment in confronting the complex problems of the post cold war world would be well advised to look elsewhere.

Unsafe as houses

In the absence of high inflation, it hold of this negative equity is only was inevitable that the British housing market should suffer a hard landing after the giddy price spiral of the 1980s. Less easy to rationalise is the failure of the market to respond to economic recovery. Even after the recent increase, nominal interest rates are low by historic standards. The ratio of house prices to earnings looks similarly depressed. Yet the latest monthly survey from the Royal Institution of Chartered Surveyors suggests that prices and activity have remained stagnant at a time when a seasonal iphit might have been expected

The impact of the government's tax increases on personal incomes is an important factor, since mortgage lenders advance money on the basis of a multiple of post-tax income. Yet the more potent restraining influence is probably the state of the personal sector balance sheet. Whereas the corporate sector has paid down debt and returned to financial surplus since the trough of recession, the personal sector is still struggling with the burden of debt incurred in the 1980s and the subsequent plunge in house prices. Mortgage debt between 1988 and 1993 rose from 26 per cent of the equity in British homes to an unprece-

dented 46 per cent. Hardest hit are the million or so households with negative equity. where borrowers are trapped in their homes until they can save enough to repay debt, or find that inflation comes to their rescue. £5.100, less than 10 per cent of the value of the average house, it would take only a small increase in prices to do the trick. Yet the gap may be harder to close than simple arithmetic suggests.

For a start, the adjustment in the personal sector balance sheet is proving a slow and painful process. Young first time buyers who might normally have emerged at this point in the recovery are absent because they bought prematurely in the panic of 1988-89. And for those who are still able to borrow, the investment logic in nousing looks less compellin Interest rates may be historically low in nominal terms, but they are high in real terms, especially when the borrower is investing in an asset that is not keeping pace even with today's very subdued rate of inflation.

In the long run things may look different. The demand for housing increases with rising earnings, while the supply of land is fixed. The poor scope for productivity growth in house building ensures a rising cost of housing relative to other goods. Against that, demographers expect a lower rate of household formation over the next 30 years as the population ages. This would reduce demand, unless older households turn out to want

more valuable homes. For the moment, though, the dull state of the housing market looks like a symptom of a sustainable, non-inflationary recovery Unfamiliar, perhaps even un-Brit-

Sweden's Yes

In the end, Sweden's vote to join the European Union was close, but clear enough. It was always going to be a hard decision to reverse all those years of staunch neutrality and independence. The fact that both the main party leaders, plus the heart of the business establishment, threw their weight behind a Yes vote must have convinced the

Now Austria, Finland and Sweden have voted to accept the membership terms laboriously negotiated with Brussels, the pressure will be on the even more sceptical Norwegians to follow suit. If they stay out, as a majority still appears inclined to do, they will be extremely isolated in northern Europe. They are and will remain members of the European Eco-nomic Area, which gives them most of the advantages of the single market, but no real influence on all the rules and regulations which underpin it. The terms they have negotiated with the rest of the EU are, by any objective measure, a good deal. Even such a notorious sceptic as Mr Jan Henry Olsen, the fisheries minister, said so. It would be good for Norway, and good for the EU, if they now

vote Yes as well. However, it is up to the rest of the Union to prove to its new members, from the obvious Euroenthusiasts in Austria to the Eurosceptics in Scandinavia, that the club is worth joining. By their accession, they will strengthen those voices arguing for free trade and budget discipline - for they are all going to be net contribu-

tors to the EU budget. They will provide a very healthy counterbalance to the rather more protec tionist influence of the southern Mediterranean member states They will bolster the free trade lobby headed by the UK, Germany and the Netherlands.

They will also bring more votes for environmental protection, for open and democratic decision making, and for high social standards, aims which have not proved so popular in London, at least. But the EU is nothing if it is not about the process of consensus-building and shared decision making. Striking deals will inevitably become more difficult as the Union grows, but this means that more effort must be made to streamline the process, to reduce the bureaucracy, while at the same time providing maximum flexibility for the devolution of decision-making - so-called sub-

Once Norway has voted, the EU can turn its attention in full to the real challenge of the end of the 20th century - which is to bring the fledgling democracies of central and eastern Europe into the fold. In both economic and political terms, it will prove a far more difficult process than the relatively painless task of embracing three or four prosperous western democracies. It will require far more adjustment in the policies and institutions of the EU. But it is the most important enlargement of all for the security, stability and long-term prosperity of the

continent

weden's Yes to membership of the European Union in Sunday's referendum vindicates the EU's enlargement strat-

with the people of Austria, Fin-land and Sweden having voted in favour of membership of the club, pressure will mount on the Norwegians to follow suit in their November 28 referendum.

Whether or not Norway follows its immediate neighbour, there is now the prospect of a new Nordic dynamic for the EU that will offset the tug towards the Mediterranean which took place with the entry of Greece, Spain and Portugal in the

The entry of Sweden - the most powerful of the newcomers - could prove a turning point in the EU's fortunes after two years marked by recession, monetary instability and divisions over the conflict in former Yugoslavia. "It shows that Europe is still attractive," said Mr Jacques Delors, outgoing president of the European Commission.

Mr Delors was worried that a No vote in Sweden would have emboldened Euro-sceptics in Denmark, the UK, perhaps even his native France. It would also have sunk hopes of coaxing fish- and oil-rich Norway into the fold. Finland would have been left isolated, and a Sweden outside the EU might have provided a focus for deeper Nordic co-operation in competition with the EU.

Instead, three - possibly four wealthy, industrious states are on schedule to enter the Union in January 1995. Each agrees, broadly, on freer trade, tighter budgets, stricter environment rules and greater openness in decision-making.

Sunday's vote in Sweden means that the Scandinavians and Austrians have finally come in from the cold. For most of the post-Second World War era, Austria, Finland. Sweden and Norway kept western Europe at arms length, cherishing their neutrality and viewing the political aspects of the (then) European Economic Community with suspicion. All four joined the UKled drive in 1959 to create a freetrade rival known as the European Free Trade Association.

The fall of the Berlin Wall in 1989 left the EFTA states facing instability to the east and caught in a political vacuum. With the EU entering its most dynamic phase with the creation of a single market and plans under way for a single European currency, the Union suddenly looked an attractive option.

Mr Delors, fearful that premature enlargement could dilute the forces of integration inside the Twelve, The entry of Sweden could prove a turning point in the fortunes of the European Union, writes Lionel Barber

Positive vote for a bigger club

New member: Swedes celebrating the clear Yes vote in Sunday's referendum on joining the European Union

proposed a half-way house called the European Economic Area. The EEA offered the benefits of the single market but not full membership. Businesses in the non-EU countries were forced to accept dozens of regulations and decisions over which they had no influence. "We were silent partners," says President Martti Ahtisaari of Finland.

Such commercial considerations were important in the applications by Austria. Sweden, Finland and Norway for full EU membership. But there was also a hard-nosed political calculation: EU membershin looked a safer bet than limited regional co-operation or relative isolation within the EEA.

"We need to be part of the political processes which have great impact on Norway's future," said Mrs Gro Harlem Brundtland,

Norway's prime minister.

The first impact of enlargement will be to prod the Union into looking less inward and more outward, especially towards the east. The Nordic countries want Brussels to pay more attention to environmental disasters in the former Soviet Union; and they are committed to anchoring the Baltic states in western Europe.

The newcomers share a goal of early EU membership for the central and east Europeans. In rough sequence, enlargement might begin with the Czech Republic, Poland and Hungary, followed by Slovakia, Bulgaria and Romania, and the Baltic states.

Second, enlargement will affect the union's trade policy. In the Council of Ministers - and inside the European Commission - a deli-

cate balance exists between the EU's northern liberal wing and the more protectionist "Club Med" countries often led by France. In future, the balance is likely to tilt

The Nordic countries are also expected to line up behind Britain, Denmark, the Netherlands and, usually, Germany in opposition to overgenerous state aid. Similarly, the addition of net contributors to the EU budget may give extra weight to the Anglo-Dutch-German campaign to control spending at the expense of the "Poor Four" - Spain, Greece, Ireland and Portugal - which benefit from extra regional aid.

toward a more liberal regime.

Third, enlargement is bound to further erode the neutrality of Austria, Finland and Sweden (Norway is a member of Nato). The three are expected to be drawn progressively

into the Western European Union the EU's fledgling defence arm. But partly out of sensitivity to domestic public opinion and to Russia, the

process will be slow. On the surface, expansion of the EU looks like a victory for UK-led arguments in favour of "widening" Europe rather than "deepening" integration. The newcomers are not centralisers and support the principle of subsidiarity, the principal of devolving decision-making from

Brussels where appropriate. But enlargement is double-edged from the UK's standpoint: the Austrians and Scandinavlans enjoy generous welfare state provisions and are determined to strengthen the EU's social policy which is such an anathema to the UK.

Moreover, all four newcomers accepted the Maastricht treaty in their accession negotiations. They show little inclination to follow the British policy of seeking treaty opt-European monetary union. They are likely to be in the vanguard of moves towards greater integration.

inally, enlargement means that institutional reform is back on the agenda. Decision-making is hard enough with the present 12 member states, each with Veto power in areas such as fiscal policy. Sixteen member states means more working languages, more European Commissioners and. possibly, more paralysis - and adds to the pressure for streamlining at the 1996 Inter-Governmental Conference to review the Maastricht treaty.

The question is: how much? With one eye on the next enlargement to central and eastern Europe. Germany's ruling Christian Democratic Union has already floated ideas for organising a Union of between 20 and 25 member states, built around a Franco-German "hard-core" committed to faster political and economic integration. But France is hesitant about a further surrender of political sovereignty; the UK remains unremittingly hostile.

This is a complex subject upon which the finest minds in Europe have only just begun to ponder. The tendency so far appears to be towards a minimum set of rules and obligations, with no member state having the right to stop others able and willing to move at a faster pace.

This is a message that suits the Austrians and Scandinavians. They have spent 30 years on the outside looking in. They have had a vigorous debate on the merits of membership. Now they are committed to

High political price to partnership

wedes are not given to hyperbole, least of all Swed-**Hugh Carnegy** on Scandinavian divisions over EU entry

ish diplomats. But no one in Stockholm thought it was out of place on Sunday night when Ms Anita Gradin, ambassador to Austria and soon to be the country's first European commissioner, tory tonight. This is the most important decision we in Sweden have taken in the post-war period." By voting to join the European the party in favour of joining. Union, Sweden and Finland (which

held its referendum last month) have cemented a profound change of direction that will affect their strategic allegiances, political alliances and economic development. However, the subdued countenance on Sunday evening of Mr

Ingvar Carlsson, the Swedish prime minister who battled hard to achieve the 52.2 per cent to 46.9 per cent Yes victory, reflected the defensive mood in which both Sweden and Finland (which voted 56.9-43.1) have embraced EU membership. A similar mood can be detected in Norway, where uncertainty surrounds the outcome of its referendum on EU entry in 13 days. The Nordic countries may be on

their way into the heart of Europe. but a large proportion of their peo-ple remain hostile to - or at least sceptical about - EU membership. The move to join the EU came

relatively recently. As late as 1990, Mr Carlsson continued to hold his Social Democratic party back from abandoning its traditional opposition to membership. A year later, of the Cold War removing a vital obstacle to neutral Sweden's participation in the EU's political structures. Mr Carlsson abruptly swung

The application for membership lodged by Sweden prompted a similar move by Finland which was afraid of being left behind on the fringes of Europe. It also saw an historic opportunity to cement its position in the west while Russia was in disarray following the col-

lapse of the Soviet Union. In Norway, Mrs Gro Harlem Brundtland, the Labour prime minister, also judged that the applications by Sweden and Finland gave the political impetus needed for an attempt to overturn the Norwegian

rejection of membership in 1972. In Sweden and Finland, a majority of voters has now accepted the case for membership made by the mainstream political, business and labour establishments - accepting the move from neutrality towards European security structures, from small-nation independence to polit-

ical co-operation, and from self-sufficiency to economic integration.

But the pattern of voting showed the divisions created by the referenda in Sweden and Finland. Most urban areas voted Yes and the lesspopulated rural and northern areas voted firmly No.

In Sweden, most regions voted No. Majorities for entry came only in the heavily populated areas

Most regions voted No. Majorities for entry came only in the heavily populated city areas

around the three main cities -Stockholm. Gothenburg and

For Mr Carlsson, there were other worrying features. Opposition to change among first-time voters was higher than might have been expected from young people. There was also strong opposition from women, who are heavily employed in Sweden's generous welfare system which they fear is under threat from EU membership.

And some 45 per cent of those supporting Mr Carlsson's Social

Democratic party voted against membership. Those who voted Yes were mainly higher-income supparties, such as the conservative Moderate party led by Mr Carl Bildt, the former prime minister. It is the better-off who expect to gain most from EU membership.

In other words, what might be described as the most characteristically "Nordic" part of the electorate - those dependent on the welfare state and those outside the big cities - rejected membership. They rallied instead to the No campaign led by a minority of the Social Democratic party leadership and two small parties, the Left party and the Environmental party.

Mr Carlsson's pro-EU campaign argued membership would give Sweden the economic stability needed to correct the huge imbalance in public finances and helpthe battle against unemployment now 13 per cent of the workforce. He rejected the No campaign argument that EU membership would

erode the welfare state. But if the economic fruits of membership do not come through quickly, the split in the Social Dem-

ocratic party over the EU could widen and become a long-term problem – not unlike the difficulties over Europe Mr John Major. the UK prime minister, has experienced in his Conservative party.

A similar pattern can be seen in Finland's vote for EU membership. who led the successful campaign to ioin the Union, has had to deal with a bitter internal battle in his rurally-based Centre party, split by fierce opposition to EU membership from farmers. The party, suffering also the political consequences of having led the government through a deep recession, is now expected to lose power to the opposition Social Democrats in next March's general

Norway's Mrs Brundtland also presides over a party that is split on the EU issue. She knows that if she wins a Yes in Norway, the country will, like Sweden and Finland, be divided geographically and politically. If Norway votes No. however, a wider divide will open between Scandinavian neighbours that have long sought to stay in step with one another.

The Nordic move into the EU is. indeed, a historic move. But forging a new relationship with Europe looks likely to impose a steep price on the politicians who have led the campaign for EU membership.

Observer

Read all about it

■ Whatever city English-speakers find themselves landing up in these days, there seems to be a local English-language newspaper ready and waiting. From the Moscow Times to the Buenos Aires Herald, someone wants to tell you what's going on in their neck of the woods.

Two new ones have now joined the ranks. Prague yesterday saw the launch of the Bohemia Daily Standard, a tabloid backed by Bank Austria and publisher Erik Best. aiming for sales of 10,000 in a city with about 30,000 English-speaking expatriates. It's edited by Francis Harris, who covered the former Czechoslovakia for the UK's Daily Telegraph.

Meanwhile in Switzerland. The Geneva Post was launched on Monday. Publisher Jacques Werner a lawyer who also publishes academic journals on arcane legal matters, hopes his paper will appeal to Geneva's large expatriate community attached to numerous UN and other international organisations.

Werner, who has hired former Independent foreign editor Harvey Morris as editor and is aiming to sell around 10,000 copies, apparently has only one prejudice - he doesn't want to see the phrase "gnomes of Zurich". So we won't mention that. But what a pity that both papers missed the chance of snapping up

Andrew Neil, former editor of the Sunday Times, who has now severed most of his links with Rupert Murdoch, Maybe the Phnom Penh Post is scouting around for a new champion . . .

Battle stations

■ Takes a naval man to restore discipline. For the first time in living memory photographers will have to wear morning dress at tomorrow's state opening of Parliament if they want to take pictures in the House of Lords. Admiral Sir Richard Thomas, a former deputy supreme allied commander in the Atlantic, who took up his duties as Black Rod a couple of years ago, has been increasingly concerned by the clothes sense of some paparazzi. Last year's turnout was felt to be particularly sloppy.

Accustomed

■ Lawrence Watson, of Hay management consultants, confessed to delegates at the company's annual international conference just ended in Prague - that not everything had run smoothly from

The problem was that a Czech customs officer questioned Hay's import of 400 copies of The Empty Raincoat, the latest book by employment theorist Charles Handy, one of the speakers. The

HOWLETTS ZOO

'You're in luck - another vacancy for a keeper's just come up'

books were stopped at the border while customs officers fired off a fax to ask; "Are the raincoats made of wool or cotton and are they for males or females? We don't know how much duty to charge you."

Flying blind

BANX

■ Is Mickey Kantor. President Clinton's trade representative and tub-thumping promoter of US commercial interests, going a bit soft? He arrived at this week's informal summit of Apec leaders in Indonesia on a Singapore Airlines flight. And that despite this year's diplomatic fracas over Singapore \$

caning of an American student. "At least the plane was a Boeing," protested an embarrassed Kantor aide.

Late delivery

Yesterday's letter in the FT from Mike Flanagan, network director of Post Office Counters, caught the eve. Not so much for his comments about the growing popularity of franchised post offices with customers, but his statement that 95 per cent of Britain's post offices have been run by sub-postmasters for the past 350 years.

Business must have been pretty slow for the first couple of hundred years until Sir Rowland Hill introduced the modern postal system in 1840.

Loose cannon

Karl Lamers, foreign policy spokesman for the Christian Democrats in the German Bundestag, is fast turning into Chancellor Kohi's unguided missile.

Lamers wants to set up a "hard core" of states at the centre of Europe and forge ahead with European federalism, much to the irritation of several European governments. One of those least happy is his own. Bonn's finance ministry takes exception to Lamers' suggestion that France, Germany and the Benelux countries will automatically form the "core"

of European monetary union. Londoners have the chance to hear for themselves when Lamers brings his federalist roadshow to town on Thursday, speaking at the Royal Institute of International Affairs and the European think-tank, Federal Trust.

Will he tone down his federalism once at the heart of Euroscepticism? Let's hope not: some snap, crackle and pop would make a nice change.

Speeding bullet ■ You've heard of Japan's

bullet-train, now meet Brazil's bullet-proof train. Next month a private company plans to resume train services between São Paulo and Rio de Janeiro. It's got an unusual marketing gimmick. In a hid to prevent passengers being caught in the crossfire between Rio's police and drug traffickers all the windows are to be fitted with bullet-proof glass.

Black whole

■ Robin Aspinall, Panmure Gordon's extremely bearish UK equity analyst, has, it's fair to say, a sceptical view of the Channel Tunnel. To wit: "What is the difference between the National Lottery and the Channel Tunnel? With one of them, investors as a whole stand to get as much as half their money back."

Russian prime minister told not to cut armed forces' funds too severely

Yeltsin warns of friction with US

. 18

President Boris Yeltsin yesterday forecast new friction between Russia and the US where the Republican party took control of Congress last week.

He also warned of an increased nuclear threat from developing countries, scolded his military chiefs for inefficiency and told his prime minister not to cut too much from armed forces' funds.

In remarks to military commanders in Moscow. Mr Yeltsin sounded a more bellicose note than he has before, though his speech was cast in the form of requiring his forces to be on guard against an increasingly dangerous world. In his first public comment on

last week's IIS elections which returned Republican majorities in the Senate and the House of

Yeltsin: scolded military chiefs

"After the victory of the conser-vatives in the US mid-term elections we can expect a certain toughening of the US stand in foreign policy and military issues. We should acquire contacts with the Republicans to balance our relations."

Although not specifically refer-ring to the US, he did say that the "international situation is quite unstable" - a marked change from last year's rhetoric when he proclaimed that Russia no longer had any enemies. Mr Yeltsin said Russia could find itself drawn into political, ethnic and economic conflicts. "There is only one solution: to increase the readiness of its armed forces," he

He told Mr Victor Chernomyrdin, the prime minister, who also attended the meeting with the commanders, to ensure that the military had enough funds so "they are not pushed down the road of commerce - they have their own objectives. You gave your word to guarantee the financing of the army and I believe you." His remarks appeared to

provide a rationale for widespread claims that military commanders are engaging in illegal commercial operations.

The Interfax news agency quoted him as saying that 385,000 personnel had been cut this year, giving an official total of 1,917,400 under arms. This is likely to be cut to to 1.7m by January 1996. He said the military leadership.

headed by General Pavel Grachev, the defence minister, "does not fully carry out my orders to tighten military discipline, law and order".

Gen Grachev has been under pressure in the state duma, the lower house of parliament, to resign following corruption allegations in the high command. So far, the president has protected

UK national lottery sells 7m tickets in first 12 hours

By Raymond Snoddy

Camelot, the operator of the UK's first national lottery for more than 150 years, said last night it was "absolutely delighted" with sales of more than 7m tickets in the 12 hours since yesterday's

The total was nearly three times as much as Camelot's informal estimates for the first day. In some places, people queued outside retail outlets selling the £1

By yesterday's launch, more than 10,000 outlets had on-line computer terminals, and a further 2,500 terminals are expected to be connected before Christ-

The lottery hopes to raise £32bn (\$52.48bn) over seven years, with an estimated £9bn going to causes such as charities to be driven to a newsagent in to charity to rai and the arts. It was launched yescentral London, where he spent in the £1 that the terday in London in a marquee in £5 and promised to donate the to good causes.

the grounds of the Tower with the help of a string octet, partly drowned out by a group of Morris dancers and a fireworks display

in the drizzle over the Thames. Mr John Major, the prime minister, pronounced it "a people's lottery". He said the country would be richer for the lottery, with everyone benefiting.

At exactly 7am Sir Ron Dearing, the Camelot chairman, pushed a wooden plunger that looked like a toadstool, apparently to initiate ticket sales around the country. The plunger was precisely that - and not connected to anything.

Early-morning guests in the grounds of the Tower - there were also official launches in Belfast, Cardiff and Edinburgh were not, however, able to buy tickets. As a result Mr Major had

more than £2m jackpot to Men-cap, the mental health charity, if

Mr Stephen Dorrell, secretary for the National Heritage, the department responsible for the National Lottery, also promised to buy lottery tickets and to give any winnings to Age Concern. Mr Dorrell warned that he had

no early plans to change the rules on how money flowing to the arts - one of the five beneficiaries - from the proceeds of the lottery should be used. Mr Chris Smith, shadow heritage spokesman, welcomed the

lottery launch but wanted to see the benefits felt in every community in the country. The main questioning voice came from the Salvation Army,

which suggested that punters should give all their lottery stake to charity to rather than the 28p in the £1 that the lottery will give

start exploratory talks with loyalist political representatives the end of the year, Mr Major announced yesterday. Speaking in London, he confirmed that the government was ready to begin talks with Sinn Fein, the IRA's political wing, by

He said the purpose in both cases was the same: to draw the paramilitaries "into democratic politics and out of violence". Mr Major said last week's killing of a post office worker by suspected Republican gunmen reinforced the need to "deal with" the weapons held by republican and loyalist paramilitaries.

THE LEX COLUMN

Testing the metal

Mr Richard Oster, Cookson's chief executive, and Mr David Davies, Johnson Matthey's chairman and chief executive, are both ambitious men. Neither seems fulfilled running a medium-sized public company. The suspicion is that the main drive behind their merger talks is size for size's sake. A combined group would be able to embark on larger acquisitions than either company individu-

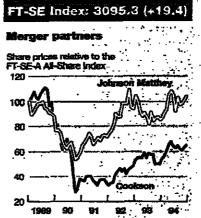

If Cookson and JM do consummate their marriage, synergies will doubtless be claimed. But from the information so far available, it is hard to see these being substantial. True, there would be cost savings from eliminating one or other head office, but that would be true if any two businesses were merged. Synergies may also come from putting together the companies' electronics and precious metals operations: Cookson and JM make complementary electronics products which may be able to share a distribution channel. JM's precious metal refining business may also be able to wring some extra profit from a vertical relationship with Cookson's pre-cious metal fabricating arm. But nei-

ther prospect looks terribly exciting. Even without much in the way of industrial logic, shareholders in one of the companies could benefit if they received a particularly large slice of the merged entity. Yesterday there were suggestions that JM shareholders might do somewhat better than the company's relative market capitalisation would suggest. But if that were the case, the benefit to JM investors would be at the expense of Cookson's. The companies will have to put on a convincing demonstration of the industrial case for merger if shareholders are to be satisfied.

BASF/Boots

Boots' reasons for selling its prescription drugs business are easier to fathom than BASF's motives for buying it. Boots' operations lacked critical mass in research and development. Discovering and bringing a new medicine to market is risky. The best way to reduce that risk is to have a broad portfolio so, if a drug is dropped because it proves unsafe or ineffective, alternatives remain. But Boots' drugs sales were insufficient to support such a large portfolio. When its heart-drug Manoplax failed, there was little to take its place.

In the short-term, BASF may discover some geographic and product

synergies. Overheads, marketing and R&D can be rationalised. The price, at 1.6 times sales, is reasonable compared with the multiples paid for American

Cyanamid and Syntex. Even so, compared with Bayer or Hoechst, BASF will remain a pharmaceutical pygmy - about 30th in world rankings. Buying Boots will promote it from the fourth to third division. If the Boots deal is the first in a series enlarging its patented drugs business, BASF's strategy may work. As Sweden's Pharmacia has demonstrated, viable drugs companies can be constructed by amalgamating third division players. Innovative products could be secured by taking a stake in

a US biotechnology group.

Though BASF's strategy may pay off, it is hard to believe it is the best use of the group's resources. BASF's strengths are not in marketing medicines. They are financial - its cost of capital is well below ICI's - and in technology-based heavy industry such as bulk chemicals. Galling though Hoechst's and Bayer's healthcare suc-cess may be, BASF would do better to concentrate on what it does best.

British Steel

There is no doubt the spectacular profits momentum at British Steel will continue as economic recovery in Europe gathers pace. But the six-fold increase in interim earnings per share will not stop investors asking whether now is the time to sell. The issue is whether the full cyclical upswing in earnings has been discounted in a share price up nearly 30 per cent against the market this year.

Higher prices and volumes will

ensure that British Steel's pre-tax profits will soon rise to beat the £733m achieved in 1989-90, the peak of the previous cycle. The top of the current cycle is likely to be 1996-97, in which pre-tax profits could amount to £900m. some 33p of earnings per share. This far ahead, there is necessarily considerable imprecision about such forecasts - perhaps profits will exceed £1bn. But assuming a conservative outcome, the shares do not look cheap. At 159%p, they are trading at nearly five times peak earnings, not far short of the peak valuation in the last cycle.

Optimists argue that the recession due for 1998 or thereafter will be gentler than the previous one. British Steel, for one, believes that steady demand from Asia will offset the impact of downturn in Europe. If this were to be the case, the shares could arguably command a higher rating now, on the basis that the stability and therefore quality of earnings was set to improve. However, the optimistic scenario ignores the woeful lack of progress in eliminating subsidies and overcapacity from the European steel industry. The shares are supported now by an above-market yield, but a rerating would be undeserved.

BSkyB

The retail portion of the BSkyB flotation contains an unusual feature: shareholders will not know the price of the shares when they send in their application forms. They will write out cheques specifying how many pounds worth of shares they wish to buy, but the price will be set later after a bookbuilding process involving institu-

The main advantage of the technique is that the time between pricing an offer and the start of dealing will be shortened. Typically in the UK, there is a delay of up to two weeks to give small investors time to turn round the paperwork after the price is set. By shortening the period, underwriting risk could be reduced and the proceeds from the offer increased. Such a system is common in the US.

BSkyB's sponsors must convince small shareholders to buy shares without knowing what their price-earnings ratio or yield will be. A similar technique was used in the third tranche of BT's privatisation. The difference is that then retail investors did not simply have to rely on institutions' judgment of what constituted a fair price; they were sold shares at a discount to what the professionals paid.

FINANCIAL TIMES SURVEY

COMPUTERS IN FINANCE

Tuesday November 15 1994

The articles in this survey deal with a number of the principal themes in financial technology including payment systems, image processing and database technology. They also cover management issues with a technological slant, including fraud and its prevention, and

There is some irony in the fact that these same technologies are facilitating many of the new challenges and lowering the barriers of entry to the finance business.

it could have been predicted. for example, that Swift, the banks' global electronic payments message system, would eventually face competition from an organisation outside the banking world with a global network and access to financial expertise. That competition now exists and Swift has been forced to announce price cuts and to lower its joining fee, in response.

Ibos (Inter-bank On-line System) is the kind of organisation which observers argue represents the new competition for Swift - in embryonic form. at any rate.

It is a joint venture initially between the Royal Bank of Scotland, Banco Santander of Spain – and Electronic Data Systems of the US, a subsidiary of General Motors and the world's largest computing ser-

vices company. Other members include Credit Commercial de France and Banco de Commercio e Industria of Portugal. The first US customer, First Fidelity Bancorporation joined this

Thomas Metz, director of global business development for Ibos in the UK, while rejecting the notion that Ibos is a direct competitor for Swift, says the group has built a cross-border cash management system - a digital superhighway for the banking industry. Swift, meanwhile, is extending its business into the area of

Management attitudes are more important than technology

While the fiercely competitive financial services industry is increasing its spending on information technology, it frequently fails to achieve the full benefits. Alan Cane examines the problem

securities messages, and has applied to become a network supplier to the UK securities industry's yet-to-be-implemented Crest settlement system as part of a campaign to increase message traffic and

The threats to the traditional finance industry come from a multiplicity of directions. Microsoft, the world's largest software house, this year acquired Intuit, developer of the most popular personal finance software, Quicken, used by about 6m personal computer users.

The deal, which is subject to scrutiny by the US antitrust authorities, gives Microsoft an important toehold in a market home banking - where traditional banks have failed to make much of an impact.

Microsoft, developer of MS/ DOS-Windows, the most popular operating system for personal computers, also aims to take a leading role in the creation of the information superhighway. One measure of the financial

institutions' renewed interest in technology, after some years of cutting back expenditure, is growth in the information technology budget. According to the consultancy Ernst & Young, US financial institutions will spend \$16.35bn on technology in 1994, 6 per cent higher than the previous year. Andrew Mayer of Ernst & Young estimates that the total

will be \$19.8bn in 1997. Comparable figures do not exist for Europe but the consultancy, Price Waterbouse, says that more than half the

financial services companies it reviewed in its annual information technology survey intend to increase their spending on technology, despite the fact, it says, that many IT projects have proved eventually to be

This is hardly new, either in the finance industry or outside. What is depressing is that over the years there has been so little progress in ensuring that projects are brought in on time and budget. The consequences can be expensive. Stewart Stevenson,

senior manager for systems development at the Bank of Scotland, after listing tried and tested rules for successful project completion concluded with the admonition: "If you can print money, ignore all the

Clearly, many companies do. According to Price Waterhouse, some 25 per cent of companies believed that most of their IT projects were unsuccessful either because they were delivered too late and over budget, or because they had failed to meet user-needs.

"The results paint a depressing picture," commented PW. "With such significant difficul-ties in the delivery of IT projects, it is not surprising that there exists a big issue surrounding the integration of IT with corporate objectives. The result calls into question the extent to which the IT functions understand the busi-

The PW result confirms the view of Nick Temple International Business Machines' genindustry in Europe who argues that data processing departments in financial services companies have become unresponsive to the needs of the business. (see interview, page two of this survey).

There are a number of technological developments which may result in some improvement in this unsatisfactory situation. An important element is the growth of object-oriented software development. Essentially, to take advantage of new business opportunities, software has to be developed rapidly and accurately. Traditional methods of software development are slow and

prope to error. The principle behind object oriented software is the creation of libraries of software assembled in different ways to

create new applications. In the end, however, management attitudes are more important than technology. The Boston Consulting Group has established a number of rules for successful computer projects (a somewhat similar list to Mr Stevenson's) of which the most important are:

 Never to commission information technology projects (it is the business imperative that is important). Quantify the benefits at

every stage of the project (if you do not measure benefits, you will not achieve them).

• Make sure the managers understand their jobs are on the line if the project fails (in too many cases, nobody has continuing responsibility for a

It gives the example of a big European bank which was conagers for 300 individual computer projects. There was no agreed way of measuring the benefits, political rather than business needs dictated priorities and most of the projects were under-staffed.

Initial analysis revealed that many of the projects were unattractive. The bank refocused its activities so that only the most attractive projects went ahead and these agreed projects were fully resourced. The result was a \$400m increase in the economic value (net present value) of the pro-jects over their life.

Concentration on core competences is the watchword for the early 1990s, however, and a number of financial services institutions are beginning to data processing. Some are actively considering, or have implemented, the outsourcing of parts of their information technology operations. IBM, for example, is managing the auto-mated teller machine network of one of the largest building

There is a fine balance, however, between operations which can be outsourced and those which must be kept in-house. One High Street bank which outsourced about 20 per cent of its operations told the consultancy Business Intelli-gence: "Financial services these days is so competitive that if you have an idea - and we have several in the bank at the moment which are being pursued - there is no way that we are going to let any outside supplier anywhere near it."

Michael Dempsey on new approaches to retail banking

Keeping customers happy

beam was head of marketing at Compucard, a project to promote telephone shopping. It was an era of unbridled optimism - and Mr Pilbeam shared the common dream of technology sweeping through the retail sector to revolutionise the most mun-

Today, he is head of operational systems management at Barclays Bank, and despite commanding a formidable arsenal of technology, Mr Pilbeam is no longer an IT vision ary - "with the remote shopping idea in the '80s, we encountered significant consumer resistance. We didn't realise that social interaction is important, that people want to get out and about when they

This has proved a useful lesson for Mr Pilbeam: under the £100m Customer System Project, 1,100 Barclays branches have joined a new approach to the retail customer. A central database has been constructed to hold 14m customer records. The big idea is to pull together previously separate processes. such as current account versus deposit, and replace them with one flow of data relating to each individual.

The Customer System is aimed at eliminating the delays that characterise opening a new account. Rather than take forms from a customer then process the risk involved and get back to the customer after an extensive credit check, Barclays wants to be in a position to approve and issue an account number on the spot. A central index held on an IBM 8090 mainframe at the bank's Gloucester data centre

is accessed via smaller IBM RS 6000 processors at each branch. The central index integrates data from customer accounts at branch level, Barclaycard and the bank's financial services operation. This goldmine of information is also a mountain of data to store. The database alone holds the equivalent of 72m sides of A4 paper.

Although the end-product should make itself felt at branch level, Barclays' has had to take a strategic view of the IT requirement that powers the

Keith Durham: rapid options must be in place it a system fails

Customer System. Huge quantities of data are best handled by a combination of mainframe computer and dedicated storage capacity. The Gloucester data centre, run under the aegis of Barclays' IT arm. Barclays Computer Operations (BCO), has installed extra stor-

US data storage specialist EMC supplied a Symmetrix 5500 system. Essentially, a sophisticated series of interlinked hard disks similar to those found in an office PC, the Symmetrix provides an electronic filing cabinet that holds data for the IBM mainframe.

This box cost £750,000 including maintenance over a fiveyear period. It is not wholly dedicated to the Customer System, but with a storage capacity equivalent to 10,000 desktop PCs, the EMC 5500 illustrates the kind of technology that is necessary to keep a huge retail project up and running.

If this impressive investment is to pay off, the retail customer must sense the bank is offering a reliable service. Sudden interruptions to normal service attributed to the catchall excuse "the computer is down" are fatal to customer relations in a competitive highstreet market

Keith Durham, a customer account executive at Barclays' Cheshire computer centre, has studied the options for Business Resumption Planning Procedure (BRPP). In the event of a big systems failure at ster, the operation could he run off another mainframe site within a couple of hours.

This is the dramatic end of BRPP. What it really boils down to is having paper forms under the counter to cope with any collapse in the branch "we don't want our staff to have to twiddle their thumbs while customers wait for a service. You've got to have procedures in place to handle any type of failure," says Mr Durham.

Telephone banking services such as Midland Bank's First Direct or TSB's Teleservice are being touted as the obvious direction for retail banking. Multimedia branches offering an array of automated terminals that stretch existing Automated Teller Machine (ATM) technology into the world of interactive video and live links to financial advisers are under

review by most large banks. The Nationwide Building Society has been running a pilot remote banking installation in Aylesbury, using technology from Siemens-Nixdorf, for the last year.

In Italy, a large number of

institutions compete in the retail banking sector. So national branch networks are not as extensive as in the UK where the historic competition has been between four operators. Italian banks have been swift to install automated branches designed by Olivetti as a comparatively cheap means of rapid expansion.

The impetus behind these developments is cost. A presence on every high street is expensive in terms of real estate and staff salaries. One of the Italian automated branches will cost around \$1m to build and equip.

Reliability is a key component of retail banking. Pilbeam expresses reservations about automated branches running intelligent multimedia terminals - "the technology is still not perfect. Even if the failure rate is only one per cent, that can put people off. There will be resistance until it becomes the norm."

Barclays appears to be steering clear of the herd instinct in retail banking. By putting appropriate data at the disposal of branch staff, it is gambling that the customer still wants a human face behind the counter. Relegating the computer terminal to a vital supporting role may

Finance industry attitudes are changing fast, says Nick Temple of IBM

Pushing back to profitability

tion earlier this year from chief executive of International Business Machine's UK subsidiary to neral manager with responsibility for the company's business with the European finan-cial community is indicative of the changes reshaping the world's largest computer com-

Mr Temple, 46, has been largely credited with pushing through measures which have put the UK operation back on the path to profitability after two years of heavy losses. Now he has returned to the business sector - the finance reputation in the 1980s as a tough, no-nonsense manager with an acute understanding of the industry's direction. It is an area of critical importance to IBM. Europe is its largest market and the financial institutions among its

largest customers. The sector is in a state of profound change, he says - "it would be wrong to say the finance industry is coming out of recession, but its attitude is starting to change very significantly. Priorities are fundamentally different from only a

cial institutions were concerned about the management of change, controlling costs and finding ways to get the maximum benefits from their investment in information technology. Today, while the ent of change is high on the list, the real concern is how to mobilise new technology to combat competition. Competition is starting to

become a real threat." The IBM mainframe computer remains the workhorse of finance industry data processing, but the computer giant can no longer dictate its ers' computing strategy as it did in the past. Mr Temple prefers to talk

about collaboration, partner- management, pointing out ships and teamwork. Some of his ideas are focused on the technological horizons: "We are planning to form partnerships with some of our customers to develop radical thoughts about ways of working in the future.

The "information superhighway," the convergence of computing and telecoms to provide interactive multimedia services to the office and the home. looms large in his thoughts. "Suppose you were setting up an electronic bank from scratch and you were

agent (a piece that you could instruct to carry out your banking information superhighway, what would it be, how would it look and go about doing

"This would be quite differventional ideas of home banking which are

He believes that to make home banking attractive for customtechnology it will be necessary to combine it with other services – say, home shoppin

Developments of this kind will have their own consequences. Conventional retailto make shopping a pleasure -or their customers will use the physical shops.

Most of Mr Temple's attention, however, is directed towards more immediate ssues. He is a powerful advo-

that the speed at which financial transactions are carried out and transmitted over networks could and has led to fraud and disaster - "if it's not applied in the right way, the technology becomes a lia-

simply extensions of what s on in the bank branch." ers who may be intimidated by

superhighway in preference to

bility and not an enabler."

the delays which most financial institutions face in creating software to meet new business needs - "data processing departments in financial institutions have become unresponsive to business needs. They seem less attached to the business impera-tives. What we

> construct building technology, can assemble solutions quickly." Object-orientation, a new

> fashion in software development, involves the construction of storable, re-usable software modules. An ohvi-

ous idea, perhaps, but one whose time has come. Mr Temple says IBM is now

moving staff to work with customers on the development of the building blocks. A key element is the establishment of a design standard (architecture) for applications in the finan cial services area which will mean that different applications will work comfortably together – "Financial Applications Architecture is a data and process architecture. We have committed ourselves to developing applications using this architecture, but we are also providing bridges into other environments so it has

opment centres are being established in conjunction with large customers to ensure a good fit between the applications under development Since taking over his new

job in May, Mr Temple bas been busy establishing the principles of how the new IBM will operate internationally. The essence of the plan is to be able to operate globally and seamlessly - "if an Italian customer wants something done in Australia, we will be able to do it without cutting across national sensitivities,"

The idea is to get rid of the stultifying layers of bureaucracy which have contributed to IBM's corporate sluggishness in recent years.

While in the past three years Mr Temple has been chiefly concerned with curing IBM's structural faults, he has some telling criticisms of the way his customers do business.

"I think many of the big financial institutions are concerned about a lack of connec tion with their customers. Not the big corporate bankers they have often excellent relationships with large clients. But retail banks have poor relationships with their customers and, as a result, customer satisfaction is poor."

He believes that banks, in spite of years of investment in technology, have not created effective customer information "If you walk into your bank

as a gold star customer and you are asked to fill in a form, then something is wrong," he Retail banks have a noor understanding of which parts ss make i

and which do not. If they don't understand the profitability of

each transaction, how are they

WHOLESALE BANKING SYSTEMS

Still room for enhancement

links between the global banking community for granted. The sheer scale of automated payments make these transactions appear commonplace. The UK's Clearing House Automated Payments System (Chaps) handles £90hn worth of payments every day. These payments are settled on a daily basis, with the danger of one participant being unable to honour a transaction termed

settlement risk. The idea of failure in such a system seems faintly ludicrous. Chaps has processed up to 76,000 items in one day - the very extent of computerised transactions lends the whole system a clinical air, but there is still room for improvement, and Chaps has commissioned systems house Logica to undertake a £3m enhancement of its service.

The aim of this project is realtime gross settlement (RTGS). Chaps needs to move beyond a reconciliation of accounts at the close of trading and into RTGS. This prevents a payment instruction going through unless the sender has funds or central bank backing to cover the transaction.

Logica wrote the original gateway software that transates Chaps messages into a suitable form for the network. Now its consultants are moving UK banks to RTGS while Chaps continues normal

"It's an evolutionary change that should be implemented by the end of 1995," says Eric Sepkes, a director of the Chaps governing body and Londonbased vice-president with Citibank. Mr Sepkes identifies the policy of building on an existing system as a Chaps strategy - "the whole idea is not to start from scratch," he says.

RTGS migration is one obvious path for electronic settlement systems across the globe. But other striking trends are emerging in the international financial messaging market. The Royal Bank of Scotland

oined forces with Banco Santander, Credit Commercial de France and Portugal's Banco puters from Digital Equipment

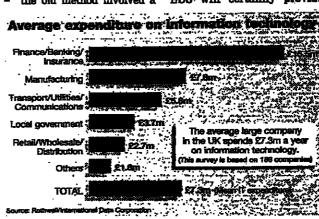

1991. Together they launched the Interbank Online System (Ihos), described by the participants as a virtual banking association. Ihos links the customer networks of the narticipating banks without reference to existing financial infrastruc-

director of Ibos, is blunt about the motivation for the £5m project. Existing structures

John Bertrand, managing ere not up to the job, he says "the old method involved a

t is easy to take electronic de Comercio e Industria in for the initial phase of operations. In January this year the US computer services giant Electronic Data Systems (EDS) joined Ihos. The Royal Bank of Scotland's own IT staff were able to integrate the first incarnation of Ibos.

But EDS made its reputation by managing other people's technology in a cost-efficient manner. By calling in the experts, the Ibos partners have tacitly admitted that they need help in expanding the network. EDS will certainly provide

flow of payments through the correspondent banks. There would usually be four banks involved in passing on one transaction.

Ibos has been perceived as a challenge to worldwide Swift international funds transfer system. Mr Bertrand is not too worried by that perception -"Thos is different from Swift: we don't compete directly because Ibos has evolved to the next level. Swift is a hub-based system with technology dating from the 1970s. Ibos allows users to send a message direct,

wherever they want."
This simple function flies in the face of traditional wholesale banking practice, where down through the network. While Swift's system enjoys worldwide acceptance it is dependent on this heritage of correspondent banks.

Ibos used network expertise from British Telecom and comvital technical credibility as Ihos trawls for more subscribers willing to pay the £50,000 entrance fee plus another £48,000 for annual hardware and software rental.

Royal Bank of Scotland has moved its traffic off the Swift system and claims a cost-saving of 23 per cent on cross border transactions. The use of third parties to

handle the nuts and bolts of technology is an established practice in banking. Outsourcing IT contracts is big business, and the market for outsourced corporate telecoms in Europe is estimated at \$11.7bn by 1997. Financial institutions will take up a large slice of this lucrative trade, and some players are diversifying from the money markets into data manipulation.

MW Marshall is one of the

world's largest money brokers. Since September 1992, it has operated a wholly-owned sub-

works (SGN), that flashes critical financial communications around the globe for over 50 clients. SGN targets mediumsized banks that require their own secure network for voice and data transmission but are not willing to pay for a huge in-house project. SGN delivers computer intelligence in the form of local processors and appropriate communications software.

"Integration of voice and data is what the market wants," says Peter Hase, SGN business development manager. Hase and his colleagues deliver that capability while the banks stick to their core activity. It is a healthy reaction to the heady days of the 1980s when banks became preoccupied with IT and telecoms

Julian Wood works with City financial and training consultancy Profile - his experience of working on ambitious IT projects within commercial banks during the 1980s has convinced him that too many institutions still go in at the deep end when investing in IT.
"A lot of banks haven't still put money into huge,

; ;

eally learnt the lessons of the last decade," he says. "They 'inter-galactic' systems meant to cure all ills. What they don? do is get the planning cycle right. They should either take a long-term view, and accept that there will be hiccops and changes to the specification en route. Or they should only invest in short-term projects."

The rise of operations like Ibos and the demand for services offered by SGN suggest that a lot of institutions are getting out of Wood's overblown 'inter-galactic' projects Logica's enhancements to Chaps will add a new dimension to the banking capability without a wholesale redesign of the core system. Electronic networks are now part and parcel of commercial hanking and many subscribers are learning that the smaller, less ambitious advances offer the most

Michael Dempsey

PAYMENT SYSTEMS

Now the 'electronic purse'

or a range of transactions other than those involving relatively small amounts of money, electronic payment is now the norm. Consumers take it for granted that they can pay for goods with plastic cards, while retailers know they in turn will get their money through electronic funds transfer at the point of sale (Eftpos), when customers' cards are swiped through

authorisation terminals. But developments are now taking place also at the lower end of the scale, which will make it possible for a new type of plastic cards to be used to pay for small-ticket items such as parking, newspapers and soft drinks. This area is known as the electronic purse.

"Plastic is accepted by con-sumers and retailers," says tor of Verifone (UK), a leading supplier of the terminals used to authorise credit and debit card transactions. "Even the newer plastic debit cards, which take money directly out of a customer's account have taken off. In the UK, debit card transactions have just surpassed credit card transac-

Individuals carry much less cash than they used to, but banks would like them to carry sive to handle. It has to be counted and hole-in-the-wall automatic teller machines (ATMs) have to be kept stocked up. More importantly, cash does not earn interest when it is in the consumer's

wallet. The latest cards, which a number of organisations are experimenting with, contain electronic money or units of value. These work rather like phone cards and can be of two kinds. They can either be throw-away cards (such as phone cards) or they can be smart cards, which can be reloaded with units when they run out.

Smart cards look like credit cards but have a computer chip built-in. This enables them to store more information than a simple magneticstripe card. Many banks favour smart-card technology because the cards have more memory and intelligence and can be given a multi-purpose function. They are also more secure hecause it is harder to duplicate the information on a smart-card chip than a relatively simple magnetic stripe.

yamples of electronic purse initiatives include the Danish DanMont card, which can be used to buy low-cost items; while in Singapore a combined credit, debit, loyalty and electronic purse card has been jointly produced by a bank and a retailer. Shell's loyalty scheme is sim-

ilar to a electronic purse. Customers who buy petrol from Shell service stations get points added to a plastic card and these can be exchanged later for goods.
In the UK, Mondex - a Nat-

West Bank cashless card, the British rights to which are shared with BT and the Mid-

shops in Swindon next year. NatWest wants Mondex to be used globally and has franchised it to the Hongkong and Shanghai Banking Corporation for use in several Asian coundards for the cards, for elec-

tronic-purse authorisation terminals, or for machines to reload them with units. However, a number of credit-card organisations around the world, such as Visa, Mastercard, and Europay are working with other companies to set standards for worldwide electronic-purse identification numbers (the kind of system that enables Visa cards to be recognised abroad), the location of the computer chips on each card and other important

> involved in standard-setting is VeriGem, a company set up jointly by US-based Verifone and French smart-card supplier, GemPlus. Mr Hansen says: "A year ago we saw the way things were going with rising interest in electronic purse cards and falling prices of Eftpos terminals and telecoms links. The 'electronic purse' could be the biggest part of the payment market because all the low-value cash transactions added together are worth more than the large transac-

One of the companies

He says many banks are experimenting with chip cards - and some have products which will be very close to the

land Bank - is to be tested in likely eventual standard. He expects a full standard to be agreed next year. Jack Large, of UK-based payment-card consultancy J&W Associates, believes electronic purse technology will start to pay off when it is brought together with account-based debit cards such as the UK's Switch and Visa Delta – "from one card you will get cash withdrawal, payment at the point-of-sale, and an electronic purse."

There are, however, a number of commercial issues to be resolved. Lars Mieritz, an analyst at the Gartner Group Europe, says: "We won't achieve a 'moneyless' society until financial institutions provide an incentive to consumers to replace cash."

With electronic purse cards, one advantage to the consumer might be convenience – "going to the ATM is a grudge transaction," says Mr Hansen. Yet, electronic money will only be more convenient for the customer if refilling an electronic purse is easier than going to the cash machine.

Retailers are starting to make far more use of the data they gain about customer purchases from electronic payment systems. They are taking advantage of powerful computers (based on massively parallel processing) to analyse customers' spending and look for

Energy-saving

The number of City dealing rooms is shrinking, says Joia Shillingford

Dealers become more selective

ity dealing rooms are shrinking in size, according to the 1994 UK Dealing Room Survey, which reports a drop of 4,365 dealing positions compared with 1990, a contraction of 14 per cent.

Windship to

Мнопрей Ветр

3

Jurse

There are now also fewer dealing rooms overall - 1.533 compared with 1,712 in 1990. This contraction in the market, coupled with a more cautious attitude towards expenditure, means that dealing-room suppliers are having to work harder for their money.

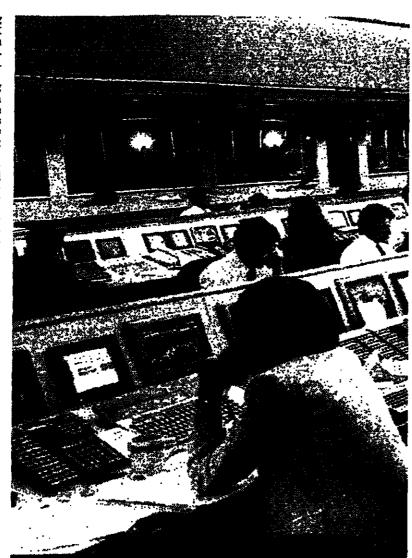

The increasing use of standard hardware, such as personal computers and Unix systems, has resulted, too, in suppliers not being able to differentiate themselves by the computers they sell. Instead, they must try to stand out by being better at fusing the many information products which dealers use into an integrated system. This is a complex process because different news and information feeds use different communications protocols, and display data in different ways.

Important suppliers in the market for equipping dealing rooms include Reuters (which owns Teknekron), Dow Jones Telerate, BT, Micrognosis, Capiti, ACT Financial, and some of the world's largest computer companies. Janet Wood, a spokesperson for Telerate believes that companies which have expertise in communications technology (such as information providers like Telerate and Reuters) have an advantage in this market, though BT's name also appears on a lot of dealing-room bids.

Customers are more interested in the information they get on their screens than on the technology they use to view it, says Ms Wood. This helps to explain why Reuters - the leading information vendor in this market - is also the dominant supplier of data management/dealing systems (with its Triarch and Teknekron systems).

Nearly 200 Teknekron dealer positions, based on Unix workstations from Sun Microsystems, were recently installed at Japanese company, Nomura's UK subsidiary. Peter Green, Nomura UK's front-office systems director, says they provide data from Reuters, Telerate and Knight-Ridder direct to the desktop in a consolidated screen environment. Instead of the different services appearing in separate windows on the screen, they look as though they are all coming from the

same place. Nomura's new system also provides real-time spreadsheet capabilities. This means that as data comes in from information feeds, it can automatically update positions (for example the

Dealers now expect to use larger, clearer computer screens, reports Microvitec, a leading er of specialist monitors. Enhanced liquid crystal display screens are on the way

amount of a particular share/currency held) recorded in an Applix RealTime spreadsheet (sold by US-based Applix). Mr Green says: "By the end of the year, we should have another 100 users on the Teknekron system. We're moving away from a large host-based dealing system, to true client-server computing where processing is distributed."

The company plans to expand its dealing operations in a number of areas. Nomura is investing more than £10m in its new dealing systems.

According to the dealing-room survey, financial institutions will invest more than £1bn in new dealing room technology over the next 12 months. in addition to capital expenditure, they will spend a further £1.7bn in ongoing costs, including subscriptions to online information services and telecommunications costs for dealing. Financial online services will account for an average 65 per cent of this figure -

costing about £40,000 per dealer per More than 75 per cent of UK financial institutions use a Reuters information service, according to the same survey, with its nearest competitors being Dow Jones/Telerate. Bloomberg and

Knight-Ridder Financial.

But Stephen Kimsey, author of the survey, says: "Although annual dealing-room spending on information ser vices will increase, companies are cutting back on the number to which they subscribe. This now stands at around three per dealing room, compared with an average of four in 1993."

This is partly because companies are cutting back on 'me too' services, and partly because some of the leading information providers have added value to their services - making rival

services less necessary. Improvements include making services accessible through Windowsbased interfaces (such as those available from AT Financial Information) adding more historical data, or providing information on extra markets (such as the Japanese equity market). In addition, Reuters has introduced a business television service and plans to transmit company annual general meetings live to dealers' desks.

But even without TV on the desktop, dealers can still suffer from information overload. They have so much information crammed on their screen that they are starting to want higher and higher resolution screens, says David Purcell of Microvitec, a leading supplier of specialist monitors for deal ing rooms - "we are starting to see demand for CRT (cathode ray tube) screens with a resolution of 800 dots across and 600 dots down and for screens with diagonal screen width of 15in or 17in. The problem is that the bigger the monitors, the more space

they take up on dealers' desks."

One alternative is to use LCD (liquid crystal display) screens, such as those used in portable computers. These are much flatter and give off less heat. Sharp Electronics says its LCD screens will be used in a big dealing room system, where instead of several overlapping windows of information being displayed on a single screen, each window will be displayed on a separate LCD screen.

Meanwhile, the systems used by settlement staff in the back office are also changing - "the back-office market is developing, with many people downsizing from mid-range systems, such as IBM's AS/400," says Mr Kimsey. Most are planning to move to Unix or PCbased systems linked to the dealing room system.

"There is a quiet revolution going on. For years, the City wasted a lot of money on technology. Now people ask: 'Do we really need it?'. They are more interested in functionality than technicality." he says.

The big banks are looking carefully at the costs of message transaction, says George Black

Challenges for Swift

wift, the Society for Worldwide Interbank Financial Telecommunication, still dominates the field of interbank messaging but it faces growing threats from other networks.

The Brussels-based company was set up in 1973 to automate the function then undertaken by telexes. Owned by a consortium of about 2,200 banks, it consolidated its position with the launch in 1990 of Swift IL After numerous delays in delivery and considerable

teething problems, Swift II re-established the organisation as market leader and standardsetter. The company's systems are used by around 4,300 financial institutions worldwide to process around 500m messages

Swift is now better positioned than it was to resist competition. The new IFT (Interbank File Transfer) tariff is seen by customers as offering a more attractive proposition for bulk transport than the older FIN service, which was prohibitively expensive for some smaller banks.

Swift is also improving its service to customers in the trade finance sector and developing new EDI (electronic data interchange) systems to help it expand into trade services. It has extended its geographical coverage to around 115 countries and is shortlisted for the contract to run the Bank of England's Crest network for share settlement.

However, although these steps have helped to persuade most banks to continue to use its services, others are looking for alternative lower-cost message carriers. Faced with big competitive pressures of their own, the banks no longer regard Swift as the only possible network service provider.

"This could prove a threat for the future, though it is not one at present," says Roger Hedges, product marketing manager for ACT's Midas, one of the principal banking software systems. "We are still connecting to Swift and we are not being wooed by anyone

Swift's chief executive officer, Leonard Schrank, admits

that the organisation had not hitherto been run on a competitive hasis - "a civil service mentality had crept in, but in the past two years we have substantially transformed the company," he says.

Prices have been cut by an average of 30 per cent. In June, Swift announced a 70 per cent cut in the joining fee in an effort to speed up the recruitment of firms in the fast-growing securities sector, as well as a 5 per cent rebate of the charge for FIN messages.

The challenge could, however, come from several directions. The banks themselves may set up their own rival networks. A group has combined in a venture called Ibos (the Interhank Online System), run by six European banks.

bos, which was founded in 1991 by the Royal Bank of Scotland and Banco Santander of Spain, competes directly with Swift in its core business of international payments. The company's claim to offer a global service was strengthened in January when the US computer systems company. EDS, a subsidiary of General Motors which provides funds transfer services to financial institutions world-

wide, acquired an equity stake. Ibos's managing director John Bertrand claims that its technology is "the next generation" to Swift's, with much greater reliability - "our error

rate is zero," he says.

Mr Bertrand says Ibos has letters of intent from eight banks wanting to join the group, including four of the top 25 US banks. Ibos's objective is to capture 10 per cent of the international payments market, with a customer base of 500 banks, in six years, he

Another challenge to Swift could come from the national telephone companies, either individually or as part of a group such as the Financial Network Association (FNA). FNA began intra-bank operations early this year, with a small number of banks participating. It has members in 14 countries and is expected to

Another potential competitor is the UK-based company Scitor, set up in 1991 by Sita, the airline reservation system cooperative. It aims to meet demand for value-added network services in certain industries outside its main business,

including finance. Sita's structure and technology are similar to Swift's and it covers more than 200 coun tries. However, Scitor's market development manager for financial services Peter Wagner says that Scitor's services are complementary to those of

Swift rather than competitive. "Swift has a narrower focus than we have," he says. "We are not trying to take Swift's main interbank messaging business, but we are interested in the branch-to-branch area and in offering cash manage ment services."

In this area Scitor is more likely to compete with EDI service providers than with Swift. Although Swift has broadened its user base to include brokers and fund managers, it has not offered its services directly to multi-national corporations for fear of upsetting its shareholders.

Shares in Swift are allocated by volume of message traffic. The top 35 banks are said to generate half the traffic and are therefore in a strong position to influence Swift's plans. Some big companies have lobbied Swift for access to its network for a limited range of transactions, particularly confirmations of payment.

Swift has yet to clarify its plans, but its chairman, Eric Chilton, has recently acknowledged that a debate is going on within member-banks worldwide on this issue. Most corporates do not want to become banks, he believes. What they need is "straight-through processing facilities" which would minimise their costs and create standards, he said.

This is a key issue for Swift's management as it considers how best to respond to any competitive threat. Swift cannot afford to delay a decision too long. Some corporations, like the hanks are starting to look for possible alternative

people because it gives them easier access to more information. It's good for your business because it removes barriers, giving you new flexibility to reorganise and to reengineer.

Client/Server computing is good for your

So the question is not whether to explore Client/Server, it's what to look for in the people who help you. Here's a suggestion: if they don't have a long list of references in multiplatform, multivendor integration, and a solid knowledge of your kind of business, call someone who has; someone like IBM.

We've built and implemented thousands of successful Client/Server solutions. What's more, we keep careful track of everything we learn.

Each Client/Server solution is unique, but we'll compare your situation with ones we've faced before to give you the direct benefit of real-world experience. And, we can help you at any stage: from initial consulting to implementation.

So if you're looking for an experienced Client/Server partner, call us first. Simply contact your local IBM representative.

INTERNET: «A Guide to Open Client/Server» is available via 1) E-Mail: client_server@vnet.ibm.com 2) http://www.europe.ibm.com/client_serve 3) ftp://ftp.europe.ibm.com/client_server/docs

Philip Manchester finds database software companies are

standardising communications between networks

Suppliers pool resources

puter networks and "electronic money" is creating a new form of commerce based on the electronic transaction. At the same time, with the growing use of itemised telephone bills and networked services such as CompuServe, the value of each transaction is diminishing and so cheaper ways must be found to process such transactions.

We are increasingly dealing with high volume, low value transactions," says John Spiers, UK marketing director of database software company Sybase. "We need to combine processing the growing volume of low value transactions with new ways to manage and con-

Database suppliers such as started to build the mechanisms needed to process financial transactions into their se software with the aim of reducing costs and increasing control

You need to be able to capture the value of the data which emanates from transactions so you can exploit the information," Mr Spiers says. A company like American Express, for example, can gear its marketing to individual nurchases on a customer's monthly bill. If you hire a car or book a hotel room, it can use this data to provide customers with information about these activities."

Pamela Pipe, a database product manager at software specialist Information Builders, sees the hidden value of the information in financial transactions as an opportunity for companies to gain a competi-tive edge - "the number of financial transactions is growing and this is driving people to find ways to analyse their data to find the value in it.

"You need the operational performance to process the transactions. But you also need the tools to bring out the information content - to pull out trends, to focus marketing and inform decisions about prod-

Mrs Pipe also emphasises the need to draw together different data resources - possibly from different computer systems -to give a high-level view of a company's information: "We are working with large financial organisations - banks and insurance companies - to look at the information spread around the network on a variety of databases. They need to magnitude improvement in

he global spread of comblend these together with their legacy systems to get the real value from them,"

explains. În spite of rivalries, database software companies are starting to co-operate in order to bring different data resource together. Information Builders is working with Oracle and IBM, among others, to create

Financial managers are demanding nn-line analytical processing (Clap) tools to improve corporate

the concept of the information

warehouse. This allows companies to treat their data as a single coherent database which can be accessed by every employee. For example, databases can now refer to each other using a language called SQL. Originated by IBM, SQL standardises communications between databases and allows a variety of tools to access data from the desktop.

SQL, by enabling the spread of databases across different computers, allows companies to take advantage of cheaper hardware. Traditionally finanssed and stored on mainframe computers. Increasingly, the same tasks can be carried out on cheaper PC-based hardware. By combining many PC processors in what is called a parallel processor, transactions can be processed and the results stored on much cheaper

hardware. Neil Morgan, a marketing manager at Oracle UK. sees processing as the future of high volume transaction processing - "with Oracle 7.1 we have added parallel query and update processing and we are seeing an order of

out. This means companies will be able to afford to process

these low value transactions." Oracle is also using the flexibility of more powerful PC hardware to lower the cost of setting up new transactionbased systems. Mr Morgan cites the example of a new credit card company. "They needed to be able to set new members up quickly so they have used a PC as the database server for the customer datahase. The transactions are processed on a larger systems but the basic set up for new members is carried out on a £20,000 PC system which supports over

100 users 24 hours a day." This is possible because Oracle's database software works on different computers, from PCs to mainframes. This is a trend echoed by other database software suppliers including IBM. "We can offer the same database technology right across the range - including computers from other suppliers," says Janet Perna, director of database technology at IBM's Toronto laboratory.

IBM's DB2 has filtered down from its mainframe computers to its mid-range and personal products, bringing the same eatures to each level. At the same time, it lets customers access data from other suppliers' database software including Oracle and Sybase.

Ms Perna says that custom ers want better access to their data - wherever it might be. She says the trend towards client/server computing - which gives users desktop power and access to company databases this. "The motivation for client/server computing is to give users a better interface to their data and make new applications easier to use.

However, this approach causes systems management problems. The need to bring a variety of data resources together and make sure that they are used properly makes the underlying software much more complex.

Database software suppliers are acutely aware of the problems of coping with the explo-sive growth of electronic financial transactions and have a wide range of solutions to offer. What is encouraging is that they are all moving in the same direction and making it easier for customers to pick and choose the tools they use to accessing and manage their

running smoothly.

t is an article of faith that hackers and fraudsters never even *think* of attacking financial institutions. And were such an unlikely event to occur, they could not possibly succeed in penetrating the physical and electronic security that protects the cash and data assets of these respected

bodies. This is the diplomatic line that all banks adhere to, even as they invest millions of

pounds in security measures. The truth is that banks are seriously concerned about the rise of ingenious hackers and the growing awareness of computer fraud as a practical criminal tactic.

Paul Rogers is marketing manager for self-service systems at AT&T's UK computer arm - the company supplies 70 per cent of the Automatic Teller Machines (ATMs) in Britain.

Mr Rogers agrees that most attacks on ATMs are physical assaults aimed at wrenching out the cash box, but that is no cause for complacency, "Designing ATMs is a case of trying to keep one step in front and making an effort to prejudge what could possibly happen." he says. Mr Rogers is determined to

pre-empt the resourceful hacker. He notes that the latest generation of ATM is based around the industry standard OS/2 computer operating system. The core of this cash dispenser is no different from office personal computers that have sold by the million.

This is a mark of the triumph of open systems and common standards, but it throws up an uppleasant possibility - because there are many people out there with an intimate understanding of the ble pattern has an instant

iddle managers in British financial services companies have for several years successfully closed ranks against the large scale introduction of document

The larger the institution, the more layers of middle management it has and the less inclined it has been to embrace image processing on a large scale. A large number of jobs are at stake. Only in autonomous or

green-field operations without such a bureaucratic heritage have image systems been widely installed Most financial firms remain

intensively paper-bound. The rise in their office productivity in the past decade has been minimal compared to that of the manufacturing sector and they still await their equivalent of the just-in-time systems revolution.

Imaging has the potential to bring huge savings on storage COMPUTER SECURITY

Worries over fraud

OS/2 platform. How can potential backers be discouraged from turning this knowledge against AT&T's clients?

Mr Rogers' answer is to create a customised security shell around the central chip and its software - "we give the customer an open system, but we protect that system from risk. Our Self Service System Software (S4) will not allow a thief to breach an ATM and then lay another program on to the system or download customer information that's stored on a remote host computer.

Fraud involving cash and credit cards remains a big problem_however.

■ rank Hickman is a prin-**■** cipal consultant with Unisys, the computer systems company. He joined Unisys from consultants Ross where he investigated the practical applications of artificial intelligence (AD. Put simply. Al is a field of technology that attempts to replicate the human brain through computer proerammes.

Despite many dubious claims by developers in the past, AI ms to have thrown up a useful product in the form of neural networks.

'Neural technology means a program can be shown many examples of a process and can then understand and discriminate within that data or process." explains Mr Hickman. This search for a recognisaattraction for banks. The speed of credit card transactions makes spotting a stolen or counterfeit card more difficult.

Some institutions such as the Royal Bank of Scotland claim success in the battle against fraud by adding account holder photographs to bank cards. But check-out staff under pressure might neglect to check a signature properly

While banks have to protect themselves from the fraud that springs from common theft. they are also coming under increasing pressure to regulate the kind of finds flowing into accounts. International initiatives against drug trafficking and organised crime can have expensive consequences for

motorway system.

financial institutions. Where does card fraud take place? Home and gardan Electrical 4% Restaurants 4% Menual cash 8% ATM 4%

so there is no guarantee that a photo will be any more likely to grab their attention.

If a neural program can sit on the network and spot a break from the typical spending pattern of one consumer. then fraud can be intercepted. This solution means looking at the transaction itself - and that can only be done using clever software. Mr Hickman characterises the problem as "M25 fraud - thieves 200ming between superstores via the

The US Treasury now requires banks to ensure that a transaction is not destined for an account that has been blocked on grounds of criminal connections.

The Treasury's Office of Foreign Asset Control (Ofac) can impose a fine of \$10,000 \$500,000 for each example of non-compliance. So the total fine for a series of infractions could run into millions of dollars. A bank may only be one stop in a chain of destinations

that culminates in a bank account with a blacklisted country or individual. But if

that bank is "the first stop" the funds make in the US, then it is culpable. When Ofac issued its blacklist of embargued accounts, 18 months ago, the US arm of the

UK systems house Logica set about devising a solution for hanks that could not monitor every transaction manually. Its response to the problem of inadvertent money-laundering is Hotscan, launched in September. This is a \$25,000 program that automatically scans all payments and mes-

sages against a database of blocked accounts. Hotscan resides on a personal computer but is linked to the bank's own payments system. At the final stage of payments processing, Hotscan refers each transaction to the blackfist database. If it spots a match. Hotscan flags the transaction indicating that action is

According to Philip Izzo, senior vice president for international funds transfer with Logica in Boston, Hotscan bas already made its mark - "the Bank of Nova Scotia in New York is the first Hotscan site to go live," he says. "In the first hour of operation, Hotscan caught out a payment going to a bad guy!"

Mr Izzo reckons that Hotscan will soon be in action in Europe — "we developed it with an eye to the future: we hear that money-laundering is a concern in the UK. US regulators have become more aggressive with the banking community, and there are suggestions of more mandatory controls in rest of the world."

Michael Dempsey

DOCUMENT IMAGE PROCESSING

Middle managers close ranks

space and to simplify office routines drastically. So far that notential has not been fulfilled. But the middle managers may not be able to hold out much longer against this type of automation. Systems suppli ers are confident they will soon be able to convince boards of directors that they cannot do without the new technology.

Once critical mass has been gained, image processing could proliferate in the same way as word processing did in the 1980s, affecting the prospects for middle managers much as word processing did those of

This threat has been staved off so far partly because middle managers have claimed that it was impossible to do away with paper because paper gave them the structure of their work. Without it people would not know what to do next to process a claim on an insur-

ance policy or authorise a loan This argument is being undermined by the progress of workflow systems, which can take over the task of supervising the sequence of actions.

hile no convincing cost-justification could be made for W made for adopting image processing from the early implementations which began in the mid-1980s, David Allcock, marketing manager for Wang UK's workflow and imaging division, insists there is now strong evidence that image processing can cut costs and improve customer service

and staff morale. At Birmingham & Midshires Building Society, for instance, the average time taken to approve a mortgage application up to the point of an offer has been cut by image processing and workflow systems from five weeks to three.

A study by the society revealed that out of the five weeks which the task had been taking the actual processing of the application took only seven and a half minutes; the rest was all waiting time.

The new systems have enabled inquiries to be carried out in parallel instead of in sequence, according to the society's head of lending ser-vices Chris Marney - "a file can be in several people's intrays at once. It's no longer so easy for a file to go missing. And without a pile of paper on their desks the staff feel a lot better about their work." At the TSB, a productivity

improvement of about 20 per cent resulted from a rationalisation of the processing of general insurance claims. This involved the introduction of image processing and work-flow systems. Fred Shaftoe, TSB's director of customer service for general insurance, says the benefit came mainly from bringing discipline into processes which were previously "a bit of a shambles."

"When a customer calls you can answer the inquiry at once, instead of having to get up and search for the file, which is impressive," he says. In some European countries bank statements are being

issued to customers incorporating miniature copies of their cheques. This service has not

only reduced the number of now possible to support four queries but proved popular and times as many users at a quarhas spread from Switzerland to Austria and Belgium British banks have yet to approve its

Another argument often used against investing in imaging was its high cost in a proprietary mainframe environment. But as the prices of powerful workstations and personal computers have fallen sharply, it now looks much more attractive to downsize to client/server systems using these machines. The cost of installing image systems is

proportionately lower. Images are stored on optical disks: a 5.25-inch disk can hold about 30,000 A4-sized pages and

a jukebox of disks can hold 10m gigabytes of data. Phillip Jones, an account manager for software supplier

ter of the cost needed five years ago and to store four times as many documents. Many applications involving documents in finance companies look ripe for automation.

Most of these companies already use scanning to capture a customer's initial handwritten inquiry, but few of them follow this through the entire system to gain the full advantage. The market leaders are

beginning to make strategic integration of these systems, but they are still the excention rather than the norm," says Steve Ball, a product marketing manager for Rank Xerox. The systems usually come

from several different vendors, so that such integration demands the creation of a new Filenet, estimates that it is set of standards. A central

standard is likely to be Postscript, the document reproduction system developed by Adobe Systems, which recently merged with the desktop publishing firm Aldus. An important emerging stan-

dard is Den, the document enabling networking standard which is backed by a group of systems vendors led by Xerox and the network software company Novell Recently they have been joined by several other signifi-

cant forces in the industry, including a subsidiary of East man Kodak and the leading database supplier Oracle. The likely rapid spread of

image processing systems may cause alarm among the thousands of people in the supervisory tiers of finance compa-

But Mr Allcock of Wang UK argues that they can only avoid redundancy by welcoming the technology and acquiring the new skills which will be in demand, not by continuing to try to block its advance.

George Black

SOFTWARE DEVELOPMENT

Rapid delivery vital

he ability to build pro-grams quickly has always been a goal for computer software developers. Users always want their nev applications immediately and seldom understand why it takes so long to translate their requirements into working

Over the past decade, fast delivery of new software has become more viable, partly because hardware and software technologies have improved but also because the techniques for building soft-

ware are better understood. Software construction can be viewed more as an exercise in engineering than the arcane craft it once was. Applications can increasingly be assembled quickly from pre-fabricated components rather than carved

from solid blocks of stone. The competitive nature of financial services makes fast delivery of software more important than in many sectors. So it is no surprise that

come to be called Rapid Applications Development (Rad). Early experiences of using Rad techniques show that com-

panies can make new applications work fast enough to gain an edge over their competitors. David Sprott, marketing director of Texas Instruments' software division, says: "An investment company we are working with in the US succeeded in putting in an advice system in 10 months instead of

he system had to provide a service, giving invest-ment advice to the public via a touch-tone telephone network - "using our tools and Rad techniques, it was able to build the system in phases and deliver it well ahead of the expected schedule," he says. The Sumitomo Bank is another example. It used Rad

techniques and development

tools from the software sup-

plier Uniface to build a bond lending and tracking applicabanks and insurance companies are pioneers in what has tion in eight months. But Mr Sprott says that

although tools are important, there is much more to Rad than automating the production of programs -"it's more important to see it as a set of management processes. You need a method to allow you to put software together that suits the business problem." He identifies user involve-

ment, "timeboxing" and what he calls iterative development as being as important as the tools. Texas Instruments moved into the Rad market from a strong base in computer-aided software engineering (Case) where its Information Engineering Workbench (IEW) has long been a respected software tool. Its experience in the Case market has shown that tools must exist against a background of sound management and an understanding of users

MULTIMEDIA SYSTEMS

A vision of the future

hile the excitement surrounding multimedia computing makes it hard to ignore, many find it equally hard to see how it can be used by business beyond applications such as training and presentation.

Early attempts to bring graphical user interfaces (GUIs) to personal computers in the mid-1980s faced similar resistance. While the potential of graphics was exploited quickly in computer games, it took several years for GUIs to achieve credibility in business applications. Initially, senior executives dismissed GUIs and graphics in general - as a distraction and worried about the effect the technol-

Administration of September 1

The second of the second

Schael Demosey

ogy would have on worker productivity. Ten years on, the idea of a PC without Microsoft's Windows or a comparable GUI is unthinkable. Thus it seems likely that by 2004 a computer without multimedia features will be as dated as the original IBM PC with its "glass typewriter" interface is now.

There is some way to go, however. A survey by Touche Ross earlier this year showed that, in spite of much interest in multimedia technology, more than twothirds of UK companies had no plans to use it - mainly because of the lack of useful applications at present.

Robert Baldock, a partner at Andersen Consulting, says that the finance sector could take the lead in using multimedia technology - "there are changes evident in the way that retail financial services are structured which will make multimedia important," he suggests. "People are using bank branches less and less and a trend towards telephone banking is emerging. Midland Bank, for example, set up First Direct because of this and others have followed. Consumers are saying that they want convenience and faster response to their needs. Multimedia tech-

nology offers a way forward." Mr Baldock is putting these thoughts into practice on a pilot project with the Nationwide Building Society aimed at creating what he calls a "virtual bank." "The idea is to create an environment on the screen which allows customers to browse through the banking services at their leisure," he says. "We have done this by building a prototype 'kiosk' which recreates a real bank. The opening screen is a picture of a bank in the High Street. You can 'walk' in through the door and move around in a three-dimensional graphics environment - pointing at things and seeing how they react."

Mr Baldock says to develop an element of fun in the virtual bank every item on the screen reacts to the user. "There is a pot plant in the lobby which, when pointed at, will bloom. There is also an infra-red remote control to activate videos on various banking services. If you go up to a counter, you can activate a video-conferencing system which lets you speak

directly to an adviser and so on." The system is only at the concept stage but a production version is planned and, ultimately, the virtual bank will be avail-

Multimedia systems will offer banking customers a faster and more convenient service

able across a network for home use. The convergence of multimedia and networking will serve as a stimulus to both technologies. Recent advances in networking will soon make it possible to offer a wide range of multimedia services in the home - and virtual banking promises to be one of first.

Home banking is one of the leading applications of multimedia and networking technology, according to Anne Perlman, vice-president of multimedia at US computer manufacturer Tandem, "We are finding our customers are moving toward multimedia in financial services, although it is still early in the cycle. The networking technology will let us take this into the home and the multimedia technology will make it attractive to consumers," she

But Ms Perlman notes that home bank-

ing alone is not unlikely to cause a breakthrough. She sees it as part of a range of networked services - "our research shows that people like a range of services: video on demand, video-conferencing, home shopping and, of course, home banking, It is when all these are brought together that people start to get interested."

Tandem is also looking at combining multimedia technology with existing data processing technology - especially in the area of processing financial transactions. Ms Perlman says that multimedia provides an ideal way to present multi-dimensional information based on traditional data processing.

"We can see multimedia giving us ways to put lots of different variables together on a screen and show things like company performance. If you wanted to look at P/E ratios, risk exposure and stock variations over a period of time, you need to present the data in three dimensions. Multimedia chnology lets you do this."

Tandem has also looked closely at the system management problems associated with the convergence of multimedia, networking and traditional data processing. Transaction billing, mail order and royalty collection present special difficulties, says Ms Perlman. "There are so many different billing and payment methods involved in multimedia networks and we have not, as yet, been able to find suitable software to do this."

Tandem is working with 32 of the world's top telecom companies on telephone billing systems and expects significant growth in transaction billing as the number of multimedia "content" providers

This is likely to change the way people buy and sell products. Mr Baldock of Andersen Consulting sees the changes beginning to have an effect on banking: electronic transactions as a percentage of the whole rose from 20 per cent in 1985 to 37 per cent in 1992. He expects this to rise to 40 per cent by the year 2000.

Philip Manchester

User case study: Leeds Permanent Building Society

Award-winning strategy

o chief executive? No worries, if the latest results of the Leeds Permanent Building Society are anything to go by. Anyone examining Leeds' promising 1994 results might be forgiven for thinking that its board's 18-month long search for a new chief executive is almost irrelevant: the UK's fifth largest building society is already in good hands.

Moreover, according to John Miller, executive director in change of information systems, the Leeds is setting its sights wider, and higher, than being just the the fifth largest building society.

"If you look at it in terms of the wider competitive base of banks, building society nd insurance companies, then we're no longer in the top 10. Our strategy is to be the best provider of home and family ser-vices, and that mission is still valid."

Mr Miller is one of what he calls "the troiks" - the team of three executives left at the top when former chief executive Mike Blackburn left to take charge of the Halifax Building Society in February 1993. Under Mr Blackburn, the Leeds prided itself on innovation, and information systems came high on the agenda. The team he left in charge (all appointed from outside the mainstream of the building society world) has proved its worth, moving the Leeds forward in the aftermath of the recession.

The Leeds has delivered record financial results and developed innovative ventures such as Leeds Life, the new life insurance company, and Leeds Unit Trust, an in-house unit trust company, in the care-taking hands of financial director and acting chief executive, Roger Boyes. A year ago the Leeds' brief firstation with the National & Provincial came to nothing, and it has continued to re-inforce its own brands, such as Liquid Gold and the Home Arranger, with extensive television adver-

In the 1993 annual accounts and direc tors' report, Mr Boyes put on record (and up-front) his belief in the need to change, and keep changing: "If we are serious about putting the customer first, then nothing about the way we do things, the way we're organised or the products and services we offer can remain unchal-

Commercial director, Chris Chadwick oversaw the business process management initiative, which asked staff to participate in an overhaul of procedures, with the aim of making the entire organisation more responsive to customers' needs. More than

forthcoming, according to Mr Chadwick -"some have been small and incremental, others have meant re-engineering our

A big re-engineering process has already taken place over the last year with the development of a unified customer database, the first step in customer-focused

Bringing about the change in information systems is John Miller's job. Although there was a strong technical emphasis

when Mr Miller arrived at the Leeds three years ago, he found an IT department that waited to be told its role - "the organisation was in technical response mode. The IT people regarded their jobs as translating the needs into a technical solution, not actually identifying the needs."

Leeds' operational systems, explains Miller, had to be re-aligned "to recognise customers as individuals, rather than a eries of account numbers." As in many financial institutions, there had been significant investment in separate applications, running on different computers. res, savings accounts, such as Liquid Gold, and general and life insurance, were all separate products, with account numbers which attached the customer to that particular product, regardless of other products or services. There were 4.3m cus

tomers, but 7m customer records. The aim was to create a unified, custom er-oriented database which would enable the Leeds to recognise its customers as users of multiple services, and to satisfy their needs in different areas by cross-sell-

Olivetti, Unisys, and IBM, and BT were already the main technical partners. The IBM mainframe-based mortgage package had been augmented in 1990 by a Unisysbased package of software and hardware. In the late 1980s, more than 420 branches

had already been automated and networked using Olivetti's IBIS cashiering and counter-top applications, running on linked PCs.

The branches had to retain the ability to give instant decisions an important element in a competitive market - "we put the emphasis on a strong service proposition, such as the Home Arranger," says Mr Miller. "At the moment of truth, eyeballto-eveball with the customer, the person in the branch has to have the ability to say yes, without referring things elsewhere."

Mr Miller's strategy was to build on the existing Olivetti workstations that already provide all the familiar front-end facilities in the branches, with IBM's DB/2 rela-tional database in the background. It "slid in" to replace the former IDMS, so that end-users in the branches did not even realise there had been a change, apart from having more facilities.

"The DB/2 database meant we could look at the customer and tell all the products - mortgage, visa card, unit trusts, whatever - they were using. First, it gives you cross-selling ability, secondly you can be more responsive to individual customer

Information systems played no small part in the break-off in negotiations with National & Provincial a year ago: it would have been impossible to integrate the two product lines and supporting systems.

Leeds takes pride in its robust attitude

to IT as a servant, not a master. This year it became the first UK building society to achieve full Iso 9000 accreditation. It has won the Alan Taylor Award for information systems training, and won the British Computer Society Hay Award for excellence in IT management.

One of Mr Miller's tasks has been to

lower unit operating costs, and concentrate on service satisfaction. A possible route forward is document management about to be piloted in one specific area.

"We're not just automating what's happening at present, but answering a different question: 'Can we do it differently, and improve productivity by an order of mag-

Speedier software development

Continued from facing page:

problems – "users must be heavily involved - preferably full time - so that they can influence the end-product and make sure that it will do the job they want," he says. Timeboxing ensures that a

software development project concentrates on the business priorities and ensures that at least a part of the system is delivered - "normally, time is a variable in software development. But in Rad you must make the elapsed time a fixed quantity and vary the scope and resources to make sure you deliver something," says

User involvement and timeboxing come together in Mr Sprott's iterative approach to development. Each part of the application is built, tested and approved by the user as the project progresses - "if you use an iterative approach, you

are agreeing what you are building with the user all the time, and parts of the systems become available early. Very often 50 per cent of an applica-tion is not needed from day one. So you can deliver the important parts and let users become familiar with them."

This approach is echoed in the move towards object-oriented (0-0) systems which emphasise the re-use of program code and component software - a technique which Mr Sprott says will help users understand their applications

"If you use the concept of business objects - such as an invoice or a sales order - the user can see what is being delivered," he says.

The O-O approach also supports the phased delivery of applications - indeed, it changes the whole nature of what an application is. Mr Sprott sees the definition of an

instead of talking about applications you can start talking about the scope of a system. You can use existing infrastructures and code to build new applications. This obviously speeds up development." Texas Instruments' view is

endorsed by most software developers aiming to produce software quickly. A recently formed industry body has published a 13-point plan for Rad. The Dynamic Systems Development Method (DSDM) consortium, formed in January 1994, includes British Airways, American Express, Allied Domecq and J P Morgan Investment Management among its corporate members as well as leading software developers

The 13 principles advocated by the consortium expand those outlined by Mr Sprott. They emphasise user involve-

Logica, Data Sciences and Cog-

ment, a concentration on business requirements and iterative development alongside uous testing, tight deadlines and close partnership between the developer and the user organisations. Rad is not seen as a panacea

to the problems of building software quickly but it promises to be another evolutionary step on the long road to understanding the complex problems of translating user-needs into working business applications.

When combined with 0-0 design and sound project management, it can produce results quickly. And because Rad places greater emphasis on user involvement than earlier software development methods, it also moves the priority away from the technology towards the business problem. Building software will

always be difficult - but it is likely to be less so as the Rad

magine that an investment house managing funds wants to identify high, medium and low-risk targets for its cash. Imagine, too, that it wants to balance the funds between the three risk types and analyse the rates of return, both planned and expected, from each type of risk. What are the IT problem

facing the investment house?

If the investment house operates in global financial narkets, the varying economic situations around the world would have a profound impact on the ability of that investment house to say accurately what may or may not happen to its clients' funds. Investing millions of pounds in equities or bonds, and switching funds between currencies around the world, adds to the complexity of the finance house's prob-

This investment house clearly has vast quantities of data to manipulate and wants to perform complex financial calculations on these data.

Where can it turn for support? Unusually, a few financiers are turning to supercomputers to manage their data, and the supercomputer vendors are certainly eyeing the finance markets with increasing inter-

A year ago, Merrill Lynch, one of the largest stockbroking firms in the US, established a blueprint for the use of supercomputers in finance. It is believed to have paid \$1.75m for a Cray Research MP2E, a twin-processor machine intended to give the firm greater power to handle its trading activities. At the time, Mr John Galonte, a Merrill Lynch vice-president, said simply: "We want to improve the timeliness of some of our calculations."

Merrill Lynch is not the only proking firm to introduce upercomputers, says Paul Clarke, brand manager for POWERParallei Systems at IBM in London. "But the lead-ership here is in the US, on Wall Street," he says.

Some Wall Street users say the technology brings such significant competitive advantage that they refuse to be identified. he claims - "customers won't allow themselves to be referenced because of the competitive advantage these machines bring them, but there are probably a handful of users out there at present."

Mr Clarke is brand manager for one of IBM's supercomputers, the SP2, a machine

SUPERCOMPUTERS

Wall Street leads the way

he describes as a parallel, scalable computer. The end-user price for the SP2 was about £500,000, but a stripped down, entry-level version costs from £200,000-£250,000, he adds.

So far, there are no users of the SP2 in the UK - the machine was only launched earlier this year, but financial users are at least beginning to discuss supercomputing.

We are in the process of setting up a meeting with UK banks," says Mr Clarke. "Our

planning; optimisation; risk analysis; pattern spotting and portfolio analysis.

In essence, supercomputers can use a number of mathematical disciplines simultaneously, making complex calculations such as simulations and real-time trading analysis relatively straightforward for the finance house.

So will finance houses move away from current systems. mainly Unix-based workstations, and adopt supercomputer

Today's Unix workstations often have the same power as supercomputers - but financial users appear to be moving away from Unix

scientists from the IBM Maths Centre in Paris will talk to our customers to find out what they want. For example, customers are telling us they're wasting millions in asset and liability management."

Supercomputers can help, be suggests. So what are the advantages of these high-performance machines, capable of processing vast amounts of data extremely quickly?

In the last two to three years. IT managers in the finance world have been seeing supercomputers used for maths based services, in general engineering applications, weather forecasting and so on. Now there appears to be a real role for them in solving commercial problems. The range of problems they can solve

include financial analysis and

technology over the next five years?

A recent survey by the

research company, International Data Corporation, attempted to discover just that. While it did not highlight an explicit move towards supercomputers, it did reveal a surprise shift away from Unixsed workstations in finance IT - "we believe that Unix systems have been oversold." comments Alison McKenzie, research analyst and co-author of the IDC report. "They haven't lived up to expectations, according to survey respondents, and they're more difficult to use than IT directors expected."

In addition, they lack some of the functions of proprietary systems without being a 'open' as desktop PCs in PC

local area networks (Lans). And it is in this area, desktop processing power and communications, that finance managers will increase their investment substantially, says IDC.

In short, finance directors seem more interested in local computing power. They ask: "What can computing help us do for our customers?

Customer service is "a very important issue right now, savs Ms McKenzie. However, she adds, more than a quarter are currently investing in mainframes and super-computers "and 60 per cent of those will be increasing their

Dr David Nunn at the University of Southampton points to the relative ease-of-use of supercomputers in comparison with Unix machines.

"On paper. Unix workstations have the same power as traditional supercomputers, but they're not as friendly," he observes. "Supercomputers have better software and better documentation, on the whole. After 20 years of working with supercomputers, I've a 'soft spot' for the Crays, even though high-end Unix boxes often have the same number of megaflops." [The term, 'flops' stands for floating point

operations per second L But to some finance IT direc tors it will seem heavy handed to switch over to supercomputers from their existing systems, which will remain Unix-based workstations from vendors such as Sun or Silicon Graphics in the short-term.

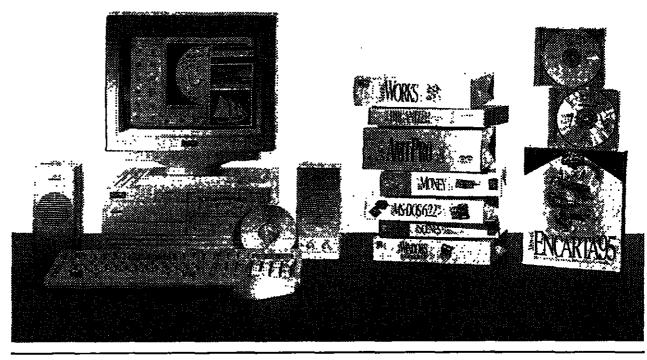

Tony Jeffree, senior consultant in the Business Technology division at the National nputing Centre, agrees.

"It depends what your definition of a supercomputer is," he says. "These days, desktop Unix workstations can handle computing of the same scale of the supercomputers from a few years ago. But I wouldn't put supercomputers in the same breath as financial ser-

Perhaps where large database services are involved, supercomputing might be useful, or for applications such as global financial modelling, but Mr Jeffree says: "My gut feeling is that supercomputer manufacturers will not move heavily into financial services perhaps at the esoteric end, but not in the mainstream.

To some users, top-end Unixbased workstations will be all they will ever need.

The humble automated teller is set to grow into an all-purpose multimedia kiosk, says Max Glaskin

Smart card meets ingenious terminal

can perhaps lay claim to being the oldest junction on the financial world's information superhighway. It was here, at a branch of Barclays, that the world's first "hole-inthe-wall" cash dispenser went live, in June 1965. Now there are 300,000 of the ubiquitous automated teller machines Gallup Organisation, the market researcher, says that

'nfield, in north London,

six out of 10 adults in the industrialised countries of the west now carry an ATM card. And, according to Tony Knight, who researches telecommunications and computing technology at Henley Management College, the ATM is developing into a much more capable terminal - "with the advent of smart cards, the user will be able to transact much of their financial business through such a terminal," he

Paul Rogers, marketing manager for AT&T self-service products, which makes a third of the world's ATMs, says future sales of the ATM will evolve from a low level cash dispenser into a multimedia kiosk capable of automating many service functions - "any retailer wanting to sell services and products or provide information will use the multimedia kiosks, which have opened up a whole new delivery channel...thus, we'll see a big growth of multimedia kiosks by the end of the century." He also predicts that new entrants could threaten the

financial institutions' monop oly of ATMs - "new multifunctional terminals could be operated by telecom companies," he says, "These will replace telephone boxes and will contain video and computer devices. They will be able to link users by telephone, fax, or computer. Services be paid for by smart cards.

"These terminals, linked to any bank, will be able to credit or debit cards, so that all kinds of financial transactions can be carried out at one terminal, to any bank or financial institution," he says. "The question is: 'Will the banks get into communications before the communications people get into banking?

Whoever is first to operate the new wave of machines, the ultimate winners will be the ATM manufacturers, NCR, Digital, IBM, Diebold, Fujitsu, Nixdorf and Olivetti are gearwill allow banks to give better

service to customers. The Huntington National Bank in the US has already introduced its Personal Touch system which has an interactive video conferencing service. It allows ATM-users to see and talk with a bank staff member, 24 hours a day, seven days a week. Although a video link

withdrawais and passbook updates are among services offered at banks

was demonstrated by the American Bankers' Association in 1965, until recently the eguipment has been too expensive. Cheaper data storage and communication lines have now made it viable - "customers are demanding more personal banking convenience." says Richard Stage, executive vice-president at Huntington. "Personal Touch is not the final solution for personal interactive banking but rather

a transitional solution on the way to home banking ser-

Manufacturers emphasise that for ATM systems to succeed, they must enhance the feeling that a bank cares for its customers, Gunnar Enroth, in charge of market development Financial Industries in Stock holm, believes that installations of multi-functional ATMs may not be the way to achieve

"Most bank customers use ATMs only to withdraw cash." says Mr Enroth. "Nobody likes waiting in a queue. Even a cash withdrawal, particularly from a hole-in-the-wall machine where the cash has to he transported from inside the building to the outside, can take up to two minutes. If other, more lengthy services are offered on the same machine, the customers waiting in line will soon

ecome disaffected." He believes that there will be growing number of fast machines, dedicated to individual tasks, just as larger branches of banks have specific counters for different

Digital has designed terminals which allow customers to make credit applications, using touch-screen technology. Under law, forms still need to be printed out and signed before the banks can process the applications but, with all details captured electronically, the acceptance period is

Bank customers, however, share a natural distrust of new technology. This could slow down the introduction of new self-service banking terminals "the banks must provide real

ers to use the new terminals," says Mr Enroth. "After all, electronic transactions will reduce bank costs and the benefits should be shared therefore with the customer."

AT&T has tried to break down techno-fear by making the user's experience more stimulating, it is supporting the new Galleria 21 shopping concept now being piloted at 'shopless shop' at 24 shopping kiosks, each of which contains a touch-screen offering the opportunity to browse through catalogues and make pur chases by inserting credit

Half a dozen British bookmakers are using similar technology to accept bets on a variety of sporting events. The more that terminals are used in other spheres of life, the easier it is believed it will be for financial institutions to automate their outlets.

But what about security? Customers accept ATM cards with magnetic stripes and are about to experience smart cards with embedded chips. They are also prepared to memorise Pin numbers. But, if more facilities are to be offered through ATMs, will the estabprotection to both the cus-

"We have tested the various other methods being suggested to replace Pin codes but they are not sufficiently accurate, says Mr Enroth. "Face-recognition, palm prints, voice recog-

tomer and the financial institu:

nition, eye iris matching - so far, none of these methods have the high accuracy rates which the banks need so that customers are not wrongly

CASTERNAS IN THE And Severe Page 3

Thus, the familiar plastic 86mm x 54mm card will proers suggest that even genera elections could one day be held via ATMs. Given that most people are more secretive about their financial affairs than about their politics, this development may also be "on

FACILITIES MANAGEMENT/OUTSOURCING

A fixed-price contract to control costs

eral foreign exchange netting and settlement service is about to become a reality and - in a coup for the outsourcing world has decided to outsource its entire data processing operation from scratch.

The Exchange Clearing House, Echo, co-operatively funded by more than a dozen banks worldwide, as a "green field site" is far from a typical deal because the FM partner the Hoskyns Group - will be involved in the development of the systems as well as the maintenance and day-to-day running of it.

Concern for security was a crucial factor in the decision to take the outsourcing route. Uninterrupted, secure, 24-hour trading was so important that Echo needed at least one secure computer site for its information technology (FI), an expense that few in-house operations could bear.

Another unusual aspect was the amount of work put in during the early stages. The five bidders on the shortlist for the contract had to work out in detail how they would develop the systems and exactly what resources would be needed, before Echo was even sure of its financial backing.

nature of the deal, Echo's chief executive Graham Duncan cites the classic reasons for choosing an outsourced deal rather than "growing in house expertise." He was looking for a fixed-price contract that would make IT costs controllable and he wanted a ready-made team, well-versed in the world of finance, that could work well together from day one. He also wanted the security of a partner large enough to offer backup experallel sites for disaster recovery.

no-one had tried to do this before. It had to go out to tender before we could be sure of the finance, and for that reason the venture would only work if we found outsourcing partners who really understood the business." he says.

Banks participating in Echo will be able to pool the amounts due to each other from foreign exchange (FX) deals. A single payment of the net amount due in each currency is then made between each bank and Echo.

As well as drastically reducing the expense of FX trading, and cutting the volume and administration of transactions, the netting system also reduces settlement and replacement risks for the par-

ticipating banks.
During the five-year gestation period, Mr Duncan worked out how to extend the low-risk ethos to his IT strategy – look on outsourcing as a risk reduction strategy. We had not a desk nor a paper clip, and what I wanted was a short cut to quality and to competence, so that all our time and teambuilding could be focused on doing the business."

he value of business to be handled by the system (about \$1,000bn daily) dwarfed the run-of-the mill IT security problems - "we focused at the beginning on two concerns: air crashes and bombs. Bombs in a financial centre offer a short cut for terrorists, and an air crash can wipe out an entire facility.

Within two years, evidence justified this approach, with bombs being planted in the City of London, and a Jumbo jet crashing outside Amster-dam, within a half-mile of two trading sites.

Echo only looked at software houses that could offer FM facilities as well as development skills. Hoskyns, in partnership with one of the UK's most experienced financial software houses, Logica, was chosen as one of only two bids remaining (and the only European company) from a shortlist of five, which itself had been whittled down from an original. invitation to tender to 17 worldwide FM providers.

Hoskyns is providing two

sub-contractor Logica, development services for software network of Vax computers, Sun workstations and Apple Mac servers. The entire contract is worth £14m over five both sides in the deal had to be sure of exactly what could be delivered, what resources would be needed, and exactly how delivery could be mea-

Mr Duncan dismisses the argument that IT is too precious to cede control to another source: IT, he says, is difficult to control in any case, agreement offers more control than many organisations have over their in-house IT.

"Twe always been a fan of outsourcing because the financial service industry ought to concentrate on being the financtal services industry. For many institutions, it's a drain on their resources and a distraction from their main busi-

Fixed-price contracts ge ally profit both parties. FM is services used 20 years ago in assuming that a user is able to put a value (not just a price) on IT services. Often, outsourc-

Graham Duncan: We decid

ing is associated with old mainframe based systems, freeing the user to concentrate on core business. However, partnerships, rather than mere client/provider relationships are now in vogue. Recent trends have

been to "split the profit" between client and provider, where real savings have been made. Andersen Consulting was awarded the contract for the London Stock Exchange (LSE) computer operations, which employed 400 staff, costing £50m a year in 1991.

The contract (awarded without tender, due to the prepara-tory work) has been running since early 1992, with the target of reducing staff by 24 per cent in the first year aim was to reduce the total running costs by £10m a year, in two years, and by £20m per annum in five years. We're already ahead of target," says Vernon Ellis, the managing partner for Andersen Consult ing in Europe in charge of the LSE project.

"We proposed taking the entire operation over, and reducing the cost of running and maintaining to free up LSE resources to develop new market trading systems But not everyone is con-

vinced. Brian Periera, manager of information systems for Pricoa Relocation Management, is talking to several potential partners, all FM suppliers, in a project to re-vamp the core systems of the company.

Pricoa is the London Region of Prudential Resources Management of America, which manages large clients such as IBM and its parent, the Prudential Insurance Co of America, in staff relocation schemes Facilities management just

isn't an option for the relocation division. We feel that by outsourcing, you're putting too many valuable resources in the hands of people outside our own company. If we wanted to go back, to take control again, would be a difficult move. and that's a major fear for any company to whom systems are important... In-house control. has to be assured."

Claire Gooding

We're helping our clients write the book on customer service.

> And here's the last word: customerize.

From banking to airlines, from telecommunications to government, Unisys has built a reputation for helping our clients help their customers.

So it's not surprising that the most powerful customer service concept in years should come from Unisys. A concept embodied in a single. thought-provoking word: CUSTOMERIZE.

A CUSTOMERIZED organisation is customerfocused at every level. The full capabilities of its information strategy are extended all the way out to the points of customer contact. where customer satisfaction is ultimately decided. The bottom line? For the private sector: enhanced revenue generation and competitiveness. For the public sector: enhanced delivery of government services.

Of course, every line of business has its unique requirements. And Unisys is a leader

cus-tom-er-ize Align information strategy with your customer service goals - the Unisys Customerize philosophy.

at applying industry-by-industry expertise to real-world customer environments. Our pioneering efforts to help CUSTOMERISE business and government are a logical extension of our strengths - strengths such as point-ofcustomer-contact solutions; a proven commitment to open systems and interoperability; and above all, services that apply technology not for its own sake but for the sake of an organisation's goals.

FINANCIAL TIMES SURVEY

It is likely environmental constraints will become more severe. Page 3

EUROPEAN AIRPORTS

Further traffic growth will be seen in southern England. Page 4

Tuesday November 15 1994

ir travel has always been regarded as a barometer of overall economic activity. One has only to visit any airport in Europe, or study the statistics, to be convinced that the recession of recent years is on the

The Association of European Airlines (AEA), representing 24 airlines, reports that the boom in demand so far this year continues. It expects traffic growth for the year as a whole, in terms of revenue passenger/kilometres flown, will be up between 8.5 and 9 per cent, with freight gaining about 13 per cent in revenue tonne/kilometres flown, "marking 1994 as one of the best growth years of the last 15 years".

BAA, owner of seven UK air. ports, including Heathrow Gatwick and Stansted in the London area, recently reported that in the 12 months to end-September it handled more than 74.2m passengers at those three airports, up 7 per cent on the previous 12 months. Heathrow alone handled 50.3m, a gain of 7.1 per cent.

For cargo, the picture was even brighter, with total air freight handled at the three airports in the year to end-September up by 16.2 per cent to 1.14m metric tonnes, with Heathrow handling 945,417 metric tonnes, up 15.8 per cent.

This is being repeated throughout Europe: almost every airport is crowded, and not just at peak periods. ACI Europe (the European regional section of the global Airports Council International), representing 261 airports in 43 countries throughout the region, reports passenger traffic up 7.9 per cent in the first half of 1994 at 278.5m with cargo up 11.7 per cent at 4.22m metric tonnes. Aircraft movements were up 2.4 per cent at more than 5m. Many airlines report strong business. The pattern of travel, too, appears to be wellspread, with a strong element of business travellers mixed in

with leisure passengers. Not only are European airports becoming busier, but most of them are also undergoing modernisation and expansion. It has been estimated by the International Civil Avia-

tion Organisation (ICAO) -

that the cost of worldwide avi-

ation infrastructure modernisa

tion could run as high as

\$350bm from 1991 to 2010, with

airport development alone

accounting for \$250bn of that,

the rest being largely for air

traffic control facilities.

projects which may qualify for

EU financial support under this policy "only three air

transport projects - airport

development at Milan, Berlin and Athens – are included",

says the AEA, adding that

most are national projects.

"None would have the pan-Eu-ropean dimension that the air

traffic control project offers," it

says, a reference to the AEA's

campaign for a unified "Single

Sky For Europe" in terms of

ACI Europe, in turn, believes that in the air transport sector,

the emphasis is biased in

favour of airlines, with airports

being largely neglected. In par-

ticular, there is a tendency to

ignore the smaller regional air-

ports when governments nego-

tiate international air services

As Philippe Hamon, director-

general of ACI Europe, points

out, in such matters national flag carriers are consulted, but

neither the airports nor the

regions they serve receive the

air traffic control.

agreements.

The figures paint a bright picture

With an anticipated doubling in passenger traffic and increased cargo activity in the next five to 10 years, most European airports are undertaking modernisation and expansion, says Michael Donne

its members throughout the region will be spending \$22bn on modernisation and expansion programmes.

The figure, however, covers basic development costs, such These airports have comas terminals, runways, aprons bined annual revenues of about \$13bn, employ more than and the necessary equipment for operations. It does not 1m people and handle more cover the cost of associated than 520m passengers a year infrastructure developments, (both domestic and internasuch as external road and rail tional), together with 8m tonnes of freight and 10m airlinks and other facilities, craft movements. These figures which are often separately will rise as traffic grows. funded developments. If these outlays are included, the over-The Air Transport Action

all cost of world airport devel-Group (a global coalition of opment could be much higher, aviation organisations) foreperhaps about \$400bn. casts that European air traffic The precise share of that required by Europe's airports of more than 500m passengers in 1994-95 will rise to about is difficult to guage, for many development plans are still in 650m by 2000, and thereafter to 820m by 2005, and more than process of formulation. But 1bn by 2010. In a further study ACI Europe estimates that on the economic benefits of air between 1993 and 1997 alone. transport, ATAG points out

that for every 1m passengers passing through an airport, between 2,500 and 8,000 jobs are created both directly and indirectly, with an annual economic impact of between \$130m and \$1.6bn.

ATAG adds that airports also act as magnets for a wide range of industrial and commercial enterprises, often fol-lowed by the development of other urban infrastructures such as housing, schools, shops, road and rail transport. This creates further employment and economic growth. BAA says that Heathrow alone generates 70,000 jobs, and that another 6,000 will be generated if its proposed £900m Terminal

But the growing volume of traffic at Europe's airports has generated its own problems,

operationally through congestion on the ground and in the air, and environmentally through the effects of noise and poliution on surrounding communities.

Air congestion is being eased steadily by the sheer weight of increased terminal, runway and air traffic control infrastructures. In many places. road and rail access are also being improved, but at slower rates, so ground traffic congestion is often a serious problem, especially at peak hours.

Earlier fears of strangulation of the air transport system because of infrastructure constraints are now lessened. ATAG points out that the estimated cost of congestion to the European economy will be about \$6hn annually by the

mated earlier, with traffic lost due to congestion down to 27m passengers a year against an earlier estimate of 50m.

But the problems are still there: ATAG says airport and ATC capacity improvements have barely kept up with increased demand. Continued spending on infrastructure will be necessary to keep pace with further traffic growth.

here is also a growing feeling that governments and the EU tend to focus more on road and rail than on air transport, and that in the latter the emphasis is more on airlines than on airports.

The AEA argues that the emphasis in the EU's plans for Trans European Networks is heavily biased towards road

to put future additional runways and terminals will be compounded by the need to meet increasingly formidable environmental constraints. This is already difficult in

Environmental issues are

inextricably entwined with

infrastructure development. No one likes an airport in his

backyard, or even nearby, and the problem of finding where

the over-crowded London and south-east England region, and the solution may well require innovative thinking - perhaps even a return to the concept of an offshore airport in the Thames Estuary. Elsewhere on continental

Europe, Paris Charles de Gaulle has more space avilable for new developments than most others, but there may well be problems elsewhere. Plans for a fifth runway at Amsterdam's Schiphol have already led to a site being selected further away from the city than the present airport.

In the meantime, as a result of the massive rise in traffic over recent years and the potential further growth, airports as individual entities are substantially changing their character.

The daily presence of thousands of people with time and money on their hands has seen the evolution of airports as important retail centres. BAA

is actively exploiting this. As Mr Hamon has said: "In the past 50 years amports have undergone major transformations. "They have developed from aerodrome to airport. From public utility to commercial entity. From administration of a simple function to management of a complex enterprise. From providers of services to airlines to enterprises marketing to passengers. From primary facility to intermodal transportation centre, indeed a platform for many commercial activities and a partner in economic develop-

The Market State

Costs

Heathrow is challenged

The rapidly emerging role of airports as catalysts for economic growth is intensifying competition for market share among the hub airports of Europe.

BAA is pressing for the development of the £900m Terminal 5 at Heathrow, London, to cope with relentlessly rising traffic and, just as significantly, to secure its position as the foremost hub airport in Europe. The development would lift capacity by 30m passengers a year to about 80m by

A hub airport is one where many passengers change air-craft (and sometimes airlines) for onward flights - to "interline" in airline language because the airport is served by a lot of carriers.

At Heathrow, more than 90 airlines from 85 countries offer direct flights to more than 200 destinations. These figures are bound to rise in conjunction with air passenger and cargo traffic, putting further pressures on slots – precious takeoff and landing times.

The slots problem at airports revolves around several factors: runway, terminal and air traffic control capacity and even the possibility of bigger

Improvements in ATC capacity by the UK National Air Traffic Services (Nats) and Eurocontrol, and the prospect of Terminal 5 support BAA's claim that it will not need a third runway at Heathrow.

The most immediate challenge to Heathrow is from the nearest continental European cities where several other hubs are expanding rapidly

ACI Europe statistics for 1993 show that Heathrow was the busiest European airport. with nearly 48m passengers, of whom about 30 per cent were inter-lining. It was followed by Frankfurt with 32.5m, Paris -Charles de Gaulle (CDG) - at 26.1m, Paris Orly at 25.4m. Amsterdam at 21.3m and London (Gatwick) at 20.2m.

At Frankfurt a new \$3.86bn terminal opened in October. raising the airport's capacity by 10m-12m passengers a year. In the past nine months the

These are the main developments at Heathrow's direct competitors but virtually every other airport in Europe is undergoing modernisation to meet the anticipated doubling of traffic by the early years of the next century.

At Heathrow, the £70m Flight Connection Centre in the Central Terminal Area, designed for inter-lining passengers, opens next month. The £300m London (Paddington) to Heathrow rail link is

due to open in 1997. Although still regarded by

Virtually every airport in Europe is undergoing modernisation to meet anticipated traffic growth

airport handled 26.5m passenrs, and is on target for 34m for the year.

The airport is linked to the German rail network and expansion plans include a secand station for advanced high-speed trains.

The Paris Airports' Authority, which owns CDG, Orly and Le Bourget, plans a third runway at CDG and a third terminal. Another terminal opened at Orly last year, raising capac-

ity by 10m passengers a year. Schiphol, Amsterdam, is a European hub already attracting many UK travellers who find it a more convenient interline airport than Heathrow. Its expansion programme will provide for 34m passengers a year by 2000 and 40m (plus 5m rail passengers) by 2015. A fifth runway is planned.

some as a "holiday" airport. Gatwick is a scheduled services hub serving more than 100 destinations. Elsewhere in the UK, Man-

chester is planning a second runway, while a planning inquiry has begun into the development of Filton, near Bristol, as a substantial regional airport for the south-west of England.

The \$22bn that ACI Europe estimates its 261 member airports in 43 countries will be spending between 1993 and 1997 on facilities, is likely to go mostly on terminals and runways within existing airport boundaries.

The number of airports planned on greenfield sites is smali – at Athens-Spata and Berlin-Brandenburg, for example - largely because of lack of would be beneficial.

space and environmental constraints of governments.

Progress since 1990 in improving and expanding airports and harmonising air traffic control facilities appears to have reduced traffic delays, leading to a downward revision in the forecast cost penalties of congestion from \$10bn to \$6bn a year by 2000.

But delays are still "unacceptably high", according to John Meredith, the Air Transport Action Group's executive director, who adds that "governments must continue to make major investments in the aviation infrastructure if Europe is going to realise the economic benefits its air transport industry can bring".

There remains the question of how far the development of advanced high-speed rail transport throughout Europe, and especially the Channel Tunnel, will affect short-haul air transport and the hub airports.

There is concern in the air transport industry that the emphasis being placed by the EU on developing "inter-modal between airports and high-speed rail services could divert attention from the need for direct investment in airports and ATC facilities

The tunnel seems certain to divert a significant volume of traffic from the airlines, especially if fares remain competitive. Whether any of those passengers will be inter-lining between rail and air is uncer tain. The Paddington - Heathrow rail link will help ease UK transfers, but a Channel Tunnel link built into Heathrow

London

Facilities cater to every type of traveller

London's five international airports represent the entire spectrum of the genre, from the overcrowded to the virtually deserted, serving everyone from the besuited businesses traveller to the sombrero toting package holidaymaker.

The number one, Heathrow, remains easily the busiest international airport in the world. A million passengers a week pass through its four terminals. It operator BAA admits that it is close to reaching a level that is uncomfortable for

The solution - a fifth terminal - will not be opened until 2002, and that is assuming permission is granted for a go

ahead next year. But airlines continue to flock to Heathrow, with the likes of American Airlines and Cathav Pacific deserting other London airports in recent months in search of the lucrative business traveller.

Inside the airport, facilities for business travellers continue to improve. The latest addition is a flight connections

London's second airport, Gatwick, still labours under an image of being a charter flight base, even though it is often much quicker to reach than Heathrow for central London-

PROBLEM SOLVED

It has just opened a business pavilion for first and business class travellers, and a transit lounge that claims to allow the quickest connections in Europe of about 30 minutes.

BAA marketed London's third airport, Stansted, as a business airport from the start. But with just 3m passengers a year and a capacity of 15m, it has a long way to go before it reaches the critical mass which is needed to attract the frequency of flights to capital cities that business travellers demand.

Number four, London City Airport, is this year finally

able to say that it is a success story. Passenger levels are 75 per cent above their levels last year and it now served 10 destinations with its small aircraft operated by six airlines including Air France, Virgin and Dutch carrier VLM.

Finally there is Luton Airport, which admits it will remain a holiday airport for many years to come. It is trying to boost its business traffic and to that end is concentrating on establishing a direct rail link to the City of London, the Thameslink, which also connects to Gatwick

Zurich and Geneva

Congestion is expected to worsen

Zurich and Geneva airports are both enjoying moderate growth in both business and leisure traffic and are suffering from capacity constraints.

In both cases, the problems are entirely related to passen-ger handling. Zurich-Kloten's three runways are more than adequate to meet foreseeable demand as is Geneva-Cointrin's single runway.

Zurich's two terminals tend

passengers in early summer when both business and leisure traffic is high. Cointrin is already handling 6m passengers a year, which is about 15 per cent more than the terminal was designed to accommodate. With passenger growth of 4.8 per cent in the first eight months of this year, things will get worse before they get bet-

However, construction is

(\$96.7m) terminal extension in a referendum next summer. that will raise capacity at Cointrin to 8m passengers a year when it is completed in 1996. Other more moderate improvements in people moving are also in the works.

At Kloten, the outlook is more cloudy. The airport is a hyper-sensitive issue in environment-conscious Zurich. A proposal for a new SFr2bn terminal building must be submitto reach their limit to handle under way on a SFr120m ted to the people of the canton

If the proposal is approved, construction could begin in _ 1998 with the hope that the terminal would open in 2003.

In the meantime, congestion in the existing terminals will worsen. In the first nine months of this year, passenger. numbers were up 7 per cent, and the upward trend is expected to continue

EUROPEAN AIRPORTS 3

n spite of accusations of noise pollution and aircraft emissions, most airports are extremely environmentally-conscious. Airport managements, especially in Europe, are not only aware that they can be penalised if they transgress the regulations, but they are also just as concerned as local populations with the well-being of the areas in which they themselves live and work.

Many existing activities, especially in Europe and North America, are already constrained by governmental regulatory requirements. These include night curfews with severe restrictions on jet aircraft movements, as well as the obligatory use of specified flight paths into and out of airports - to minimise noise in built-up areas - take-off and landing "noise abatement" procedures, and strict operational procedures to minimise noise created by aircraft on the ground.

The likelihood is that such environmental constraints will become even more severe. The Airports Council International, representing the owners and operators of almost 1,000 airports worldwide, believes that as environmental regulations become increasingly important, the air transport industry, because of its visibility and its continuing image as an elite

big improvement in the overall

Throughout Europe, it is now

opments can take a long time. In the UK, it can take as much as 10 years from conception to in-service operation for either a new terminal or run-

In some places it can take longer. It took about 30 years to get Munich's new airport up and running, although part of those delays were due to financial problems.

BAA has a well-established track record in assessing the environmental impact of ventures such as new terminals. Before submitting proposals for such developments, it prepares comprehensive environmental assess ments of the project.

In the case of the proposed Terminal 5 at Heathrow, an environmental statement was submitted with the application for planning permission in February, 1993. BAA has also made meticulous preparations for the forthcoming public planning inquiry into Terminal 5, which starts on May 16 next year and could take more than a year to complete.

Such inquiries are the best means of ensuring that everyone involved from the airport managements through to local residents and workers, can have a voice in what is planned. No one has yet devised a better way of ensuring that environmen tal - and social - Justice is done.

nsterdam's Schiphol airport Amsterdam

Schiphol has grand plans under way

Amsterdam's Schiphol Airport is in the middle of an ambitious, multi-billion guilder expansion drive that will allow it to handle 40m passengers a year by the year 2015. This is a near doubling compared with

the airport in 1993. The airport also hopes to build a new, fifth runway around the turn of the century. Opponents of Schiphol's goal of becoming one of the Europe's "mainport" for air traffic are focusing their attention on trying to delay the runway's construction.

the 21.3m passengers who used

A milestone in the expansion programme was reached in May 1993 when Schiphol's terminal extension was opened in May 1993, boosting potential capacity to 27m passengers a year from 19m previously.

tion Organisation (ICAO) has called a conference for next March, with the The extension, used primarily as a base for intercontinental flights, was designed so Michael Donne that Schiphol could retain its

Schiphol is aiming to keep its future expansion within this one central terminal. although satellite terminals may be necessary in the 21st century. Transfer passengers, particu-

larly those from regional airports in the UK, are crucial to Schiphol. In 1993, 43.4 per cent of all passengers arriving on scheduled flights were stopping over to catch a connecting In August, Schiphol opened a

new pier dedicated to regional airlines, as part of its strategy of strengthening its position as a European aviation hub.

Like other airports, Schiphol has a wide range of facilities for business travellers, including office space, lounges and meeting rooms.

Ronald van de Krol

mode of transport, "runs the risk of being singled out for special treatment in this respect". ACI believes airport owners must be ready for this.

But much progress has been made. Over the past 30 years, the noise of jet engines has been progressively reduced through technology advances, while legislation requiring the phasing out of older, noisier and dirtier aircraft in favour of cleaner and quieter modern types has, together with improved operational practices, transformed aircraft fleets.

The result is that airports today are much quieter places than they were, in spite of considerable increases in air traffic. This process is continuing. A meeting in December 1995 of the International Civil Aviation Organisation - which is responsible for establishing environmental standards for the world air transport industry through its Committee on Aviation Environmental Protection (CAEP) is expected to recommend further tough standards on aircraft noise and

determine just what environmental

But the environmental record of most airports in Europe is generally good. BAA in the UK, for example has introduced extensive landscaping round its airports and erected sound barriers to help shield local communi-

out its activities, its targets and achievements. British Airways, the biggest user of UK airports, does the

impossible for any airport to undertake a major expansion programme without first having to satisfy local authorities, as well as regional and central governments, of its environmental acceptability.

Winning acceptance for new devel-

pattern of delays to air traffic throughout western Europe has been seen over the past few years. However, much remains to be done to ensure that the region can cope with the anticipated doubling of passenger traffic in the next five to 10 years. Forecasts that the cost to the Euro-

pean economy of air traffic delays would rise to \$10bn annally by the end of the decade if nothing was done, have been revised downwards to \$6bn. But at that level, continued government attention is still needed throughout Europe, especially in air traffic control, with the work that has been done barely keeping up with increased demand. In the UK alone, the National Air

Traffic Services (Nats), operating under the aegis of the Civil Aviation Authority, handles 1.5m aircraft movements in controlled airspace annually, involving more than 100m passengers. In addition, the ATC system has to cater for much traffic overflying the UK, mainly between continental Europe and North Amer-

UK airports have experienced a sharp drop in the number of delayed departures, despite an increase in aircraft movements, with delays at London atroorts down from 28 minutes on average to eight minutes over the past three years. This is largely due to the increase in ATC capacity resulting from the introduction of the Central Control Function (CCF) at West Drayton, near Heathrow, which

Clear skies – at a cost

Western Europe is gradually sorting out its air traffic control

helps to increase the volume of traffic • A proposed new Scottish and Oce-

To ensure its operations not only keep pace with traffic growth but also move ahead of it NATS is investing in new facilities at the rate of £150m a year, compared with £20m a decade ago.

Privatisation of Nats, now under consideration, will be likely to make it much easier for Nats to gain access to private capital markets to help finance its expansion programme. Important elements in Nats' current development programme include: • The new £350m en route air traffic

control centre, under construction at Swanwick, Hampshire, which enters operational service in late 1996, enabling ATC capacity to be expanded in line with traffic growth; Completion of the CCF project, to provide capacity in line with growing demand in the London terminal area, by end-1995:

• The Scottish radar replacement programme, including a new radar installation north of Aberdeen for helicopter operations in the northern North Sea, and the re-equipping of existing sites, one near Aberdeen and one at Lowther Hill, by late 1995 and 1996 respectively; and

anic air traffic control centre, adjacent to the existing one at Prestwick, for completion by about 2000.

Much is also being done to upgrade existing infrastructures to increase efficiency, cut costs and meet international commitments, especially to Eurocontrol, the pan-European body based in Maastricht which is masterminding the region-wide improve-ment of ATC called Ratchip - the European ATC Harmonisation and Integration Programme.

ats' own infrastructure improvements include:

• A new ground-to-ground communications system comprising a core network of digital links to meet both CAA and Nats requirements; • UK-wide replacement of radio-station control and monitoring equipment which is becoming increasingly expensive to maintain; and

• A new radar data transmission network to cope with increasing air traffic volumes and to cater for the needs of the new en route centre.

On the wider European scene, Eurocontrol's Eatchip programme was created by the European Civil Aviation Conference (ECAC, repre-

senting the governments of more than 30 countries) in 1990.

Eatchip is aimed at creating a seamless Europe-wide ATC system to replace the present motley collection of individual national systems, so that as far as possible all European air traffic can flow smoothly.

The core of the problem is that overall air traffic in Europe is handled by more than 50 control centres, using more than 30 different (and sometimes incompatible) ATC systems, involving many different computer operating systems and programming "languages". It is impossi-ble start again, so the task is one of updating, renewing, harmonising and integrating these myriad systems. Broad targets for Eatchip include:

• Implementing a Central Flow Management Unit (CFMU) in Brussels by the end of 1995, supported by comprehensive radar usage throughout continental Europe; • En-route radar separation of five

nautical miles between aircraft in high-density traffic areas, and of 10 nautical sizes elsewhere by 1995; • The progressive integration of ATC systems, after harsonisation, in high-density areas by 1995, and elsewhere not later than 1998; and

aim of settling the matter.

Jet lag can be a drag.

It's afternoon in Tokyo. The business meeting is going well. Yet something feels wrong. Your body is awake, but your mind seems asleep somewhere in London. Welcome to the world of jet lag.

The Hotel Okura understands that adjusting to new time zones is often half the global business battle. So we've created a special Jet Lag Plan that helps you adapt as quickly as possible.

The only such plan in Japan, its amenities cover the three main avenues of attack for overcoming the effects of jet lag:

Exercise: Use of the Okura Health Club for stretching, swimming, sauna, jet stream bath and body sonic systems.

Relaxation: A light therapy box that simulates soothing natural daylight, relaxation videos, and the special sleep pillows you prefer automatically furnished to your room every time you visit-a Hotel Okura exclusive service.

Special Okura jet-lag nutrition menu. Naturally, all this takes place in an atmosphere of comfort and luxury that makes the Hotel Okura the best business address you can have when you're travelling in Japan. Find out for yourself.

PORTMAN

Michael Donne looks at the case for expansion in southern England

Coping with the crowds

inquiry into the proposed Terminal 5 at Heathrow, London, pressure is building for further airport expansion in southern

The inquiry, in May next year, will examine the case for Terminal 5 set out by BAA which owns Heathrow, Gateast England as well as Southampton in the south-east and Glasgow, Edinburgh and Aberdeen in Scotland.

The company says that by 2015 traffic at BAA's southeastern airports will have soared from more than 70m movements now to about 160m. If terminal capacity does not increase, traffic will be lost to European competitors, such as Amsterdam, Frankfurt and

BAA says it will self-finance the £900m Terminal 5. If work starts by 1997, the first phase will be completed by 2002, adding 15m passengers a year; phase 2, expected to finish by 2013, will double this to 30m. The extra space will raise Heathrow's capacity to 80m passengers a year; in the 12 months to this September it handled 50.3m.

BAA says that over the past gers at Heathrow has more than doubled, while the number of people affected by noise has been reduced from 2m to fewer than 500,000 by the use of quieter aircraft.

When Terminal 5 is completed. BAA says this number will have fallen to about 300,000. The company encourages the use of quieter aircraft by offering discounts on airport charges for them and penalties for noisier ones.

If approved, Terminal 5 would create 6,000 jobs - not including those in construction work - and 8,000 existing jobs would be protected. Heathrow generates 70,000 jobs, and the airport and the businesses it supports contribute £3bn a year to the economy.

Airlines and other aviation businesses strongly favour Terminal 5. But opposition is expected from residential and environmental lobbies around Heathrow - despite the BAA's rejection of another runway

thing would be done to lessen environmental problems.

Long before Terminal 5 is fully operational however, BAA and the airlines will have begun to think hard about how to cope with further traffic growth. New terminals are under consideration for Gatwick and Stansted and another of the southern airports.

The runway debate is becoming contentious. BAA, believes that a new one is not likely to south-east at least until 2010, a view supported by a Department of Transport working group, Runway Capacity to Serve the South East (Rucatse), which says "benefits to passengers could provide a case for a further runway at Heathrow or Gatwick by 2010 or, if this were not provided, at Stansted by 2015".

Rucatse says there is scope for making more use of existing airport capacity in the south-east than had been assumed, and that greater use of regional airports would also help to delay the need for expansion in London.

It identified possible sites for additional runways at the four main London airports, and looked at the plan for an offshore airport near Sheerness (Marinair). Rucatse was not asked to make any formal

recommendations but its report was intended to stimulate debate in UK commercial aviation.

The airlines believe that if traffic increases, another south-east runway would be needed - by 2005 rather than 2010 - at either Heathrow or Gatwick, to benefit from expanding inter-lining (connecting) traffic.

The British Air Transport Association (Bata), representing the airlines, says that traffic growth has outstripped projections, and could reach the 160m level by 2010 rather than 2015. A study it commissioned from Alan Stratford and Assocapacity would be exhausted by 2012 (near the time that Terminal 5 would be working) and that by 2015 there would be more than 22m passengers too many for London's airports. "This clearly points to the

need for new runway capacity to be provided in the early years of the next century, even if Terminal 5 and expansions at Luton and Stansted are sanctioned," says Bata. "If new (runway) capacity is

to be provided, the Heathrow/ Gatwick axis is the most efficient location for it." Earlier this year the Char-tered Institute of Transport, in

its report "New Solution for

Rucatse under-estimated the urgency of the need for additional runway capacity at Heathrow, and did not "adequately assess the broader economic issues and the vital contribution which air services make to the prosperity of the economy". Nor did Rucatse fully acknowledge "the advances in aeronautical tech-nology which have substan-

tially reduced, and will con-

tinue to reduce, the adverse

environmental impacts of air-

line operations." The institute said more aircraft could use the airport if parallel runways were built closer to the existing runways. Meanwhile, other expansion schemes are emerging: an independent company has proposed redevelopment of the airfield at Redhill near Gatwick, as a "reliever" airport. BAA contin-

ues to spend large sums on its own airports. Apart from Terminal 5, which will cost £100m even before the planning inquiry starts, the company has earmarked £3.5bn for capital expenditure at all its airports in the next 10 years.

The John Mowlem-owned London City Airport is steadily expanding, forecasting up to 460,000 passengers in 1994, compared with 245,000 in 1993 and hoping for 1m pas a year by the end of the cenParis

Expansion comes under scrutiny

accommodate more aircraft and passengers in the Paris region appears to have been suspended until after next spring's presidential and

Aeroport de Paris (ADP), the public operator for both Charles de Gaulle at Orissy and Orly, had planned to build a third runway at Orissy by 1997 or 1998. But the question is now being scrutinised by a special commission that is not due to present its conclusions

The commission is also looking at the idea of building a third airport in the capital area to relieve pressure on the two existing facilities which have not reached saturation but could do so if air traffic continues to increase.

One analyst said he expected in favour of both schemes, as it would take about 20 years to complete the new airport.

Meanwhile, the ADP projects aircraft movements and passenger traffic to rise by an annual average by 3 per cent over the next five to 10 years. If the analyst is right, the government could have a numher of schemes to choose from Four schemes have already been drawn up; two in the Amiens region, one near Chartres and the other near Chalon-Sur-Sone, all of which

ital since the 1960s.

Of the two existing airports, Orly is the most congested. Runways are operating almost at full capacity for three to four hours a day, compared to one to two hours at Charles de

Gaulle. This is the reason transport minister Bernard Bosson cites for seeking a ban on smaller carriers from peak travel hours on busy routes from Orly in mid-1995. Initially the ban was to apply to only the Orly to London route but it is now to be widened.

Protests from local politi-cians and residents held sway over the plans before the commission was set up, and the government had agreed to shift eastwards the location of the proposed third runway at Charles de Gaulle.

It also said it was giving up the original long-time "hypothesis" of increasing senger traffic to 80m from the present 27m. The original plan included the possibility of

building five runways.

Mr Bosson said that the concerns of local residents were also behind the decision to keep aircraft movement at Orly down to the current level of about 200,000 a year instead of allowing them to increase to 330,000 an idea that was first mooted by the ADP, chief spokesman Jacques Reder

Kerkorian hits out at Chrysler

By Richard Waters in New York

Kirk Kerkorian, the billionaire US investor who is the biggest shareholder in Chrysler. yesterday launched an attack on the carmaker's anti-takeover The company's shares jumped defences and said he wanted to 5 per cent in heavy trading durraise his stake in the company. yesterday, Mr Kerkorian also called on the company to take steps which would increase the value of the company's shares. These included undertaking a crisis and was valued at less than

gramme over the next year, raising its quarterly dividend and enacting a two-for-one stock split. The Las Vegas-based investor said he had been rebuffed in earlier approaches to the company. aise his stake in the company. ing the morning, lifting Chrys-In a letter to Chrysler's board ler's market value to \$17bn. When Mr Kerkorian first bought his stake of more than 9 per cent in December 1990, the company was in the throes of a financial

Under a poison pill plan adopted in 1990 to ward off Mr Kerkorian, Chrysler's directors could thwart any attempt by an investor to take a stake of more than 10 per cent by giving other investors the right to buy additional shares at half-price.

At the time it was introduced, Chrysler said the plan was intended "to act in the best interest of all the company's shareholders if someone should seek to obtain a position of control or substantial influence over ChrysTracinda, Mr Kerkorian's pri-vate investment company, indicated that it would seek approval under US anti-trust law to take its stake in the carmaker to as much as 15 per cent.

A week ago, a brief announcement by Mr Kerkorlan which was filed with the SEC for regulatory purposes, prompted concern among Chrysler shareholders that he was preparing to sell part of his investment, in turn hitting the company's share price.

To conserve cash, the company halved its quarterly dividend to board last year.

15 cents a share in 1991. This year, with the North American car markets booming, it has raised the dividend twice, to 25 cents.

Directors are scheduled to meet on December 1 to agree the next

dividend payout. Mr Rerkorian, whose current interests include the MGM Grand casino in Las Vegas, has become a close personal friend of former Chrysler chairman Mr Lee Iacocca since 1990. Mr Iacocca stepped down from the Chrysler

Demand bolsters British Steel

British Steel, Europe's second largest steelmaker, is raising its interim dividend from 0.5p a share to 2p after a surge in half-year pre-tax profits from £27m to

£159m (\$260.7m). The company reported its best interim results since 1990/1991 yesterday. Mr Brian Moffat, chairman and chief executive. said the rise in the dividend reflected the better results and the more favourable economic outlook. Prospects for the second half were encouraging, he said. with demand in the UK and continental Europe expected to grow by about 5 per cent this year.

The company has indicated to analysts that the interim payout could represent one-third of its total dividend for the year, indicating a final payment of 4p and a total of 6p. That compares with rust 2p for 1993/94.

The City of London had been expecting a big rise in British Steel profits and in the interim payout, and the shares closed 1p higher last night at 159%p.

Some analysts raised their profit forecasts. Mr Tony Lance-lott at UBS, one of the British Steel house brokers, lifted his forecast this year from £375m to

British Steel is benefiting from a worldwide increase in steel prices as demand rises and supply is squeezed. Volumes and prices rose about 6 per cent in the first balf. Mr Moffat said that, in D-Mark terms, continental European steel prices were still about 10 per cent below 1989 levels, and steelmakers would be looking to recoup at least that difference.

UK plants are working at 95 per cent capacity, even though UK steel demand is still 25 per cent below its 1989 peak. Mr Moffat said steel demand in

developing countries was growing by 5-7 per cent a year compound, and already accounted for 43 per cent of total steel demand worldwide. British Steel, he said, would

Commission to resolve the subsidies issue, following the partial withdrawal of the Commi steel rescue plan. He was encouraged by the

refusal of Mr Tim Eggar, UK industry minister, to endorse the latest proposal to support Eko Stahl, the east German steelmaker. A rescue plan has to be agreed unanimously by EU industry ministers. Lex, Page 18; Details, Page 31

BSkyB chief may receive £2m bonus

Ohase Manhattan

Mr Sam Chisholm, the chief executive of British Sky Broad casting, could receive up to £3m (\$4.9m) this year in salary and bonuses, the pathfinder prospectus for the

"meaningful" stock buy-back pro- \$3bn.

satellite television venture revealed. In addition to his salary this year of about £340,000, Mr Chisholm, who is regarded as a key figure in turning around BSkyB, has received £732,000 based on 0.5 per cent of pre-tax profits in the 1993-94 financial year. Since June 1992 BSkyB has moved from an operating loss of £47m to an operating profit this year of £170.1m.

The document reveals that when the BSkyB share price is quoted, £7.5m will be

Bankers Trust

managers as a one-off payment. Of the total, £3.8m will be paid to three current and proposed directors. Mr Chishoim is expected to receive more than half this total, possibly as much as £2m.

The prospectus for the company's London and New York flotation also showed continuing growth in subscriptions. During the three months to the end of September this year, normally a quiet

period for subscription growth, BSkyB added more than 162,000 new subscriptions through dish and cable networks, lifting the total to 3.65m. Mr Richard Brooke, BSkyB chief finan-

cial officer, said "the relentless growth"

Nine months to end of September 1994

Shell pays Edison \$152m for control of Italian venture

By Andrew Hill in Milan

Royal Dutch/Shell is to strengthen its presence in Italy by buying the half-share of the MonteShell petroleum joint ven-ture which belongs to Edison, the energy subsidiary of the Montedison industrial group.

Shell Italia, the group's Italian subsidiary, is to pay L238bn (\$152m) for total control of the refining, transport, storage and distribution operations of Mon-1987. MonteShell has a 7.6 per cent share of the Italian market.

The two companies announced vesterday that they had reached agreement on the sale, which should be completed early next year. The price will be fixed after MonteShell reports its 1994 results. It is the second big deal struck by Montedison and Shell in the past year.

The Italian company is restructuring following its near-

collapse in 1993, while the Anglo-Dutch group is pursuing a programme of expansion in Italy. Under the terms of the prelimi-

nary agreement on MonteShell, Edison will pay MonteShell L58bn to retain a 50 per cent stake in its liquid gas operations and in some industrial activities Montedison and its financial

holding company Ferruzzi have been pursuing a divestment programme since last December in Yesterday, Montedison said

that the proceeds of the Monte-Shell sale would be reinvested to help develop the group's energy Edison, which is listed on the

Milan Stock Exchange, is the biggest of Italy's private energy pro-ducers and could benefit from a liberalisation of the sector after

the privatisation of Enel, the state-owned electricity company,

JP Merasi Bankers Trust Risky business everaged swaps have turned into the Achilles heel of Bankers Trust's

Richard Waters reports on a failure of leveraged swaps

derivatives business

The bank says it has sold these instruments to fewer than a dozen companies, all of them in the US. But at least two of these companies have since filed law-suits over multi-million dollar losses they incurred. And an internal investigation has uncovered breaches of the bank's rules in the way other leveraged swaps were sold to companies, leading to the removal of six executives from their posts last week.

In an interview before the internal actions last week, Mr Charles Sanford, the bank's chairman, refused to comment on the legal cases - a \$130m claim from Procter & Gamble, the consumer products group, and a \$78m lawsuit from Gibson Greetings, a greetings card company. But, referring to companies which buy complicated financial instruments, he said: "Everybody

has to have risk management. Whatever the merits of the lawsuits and the outcome of Bankers Trust's internal review, the experience of recent weeks raises

First, should the bank have been selling these instruments to companies at all? Under a leveraged swap, the normal payments that would be made under an interest rate swap agreement are multiplied, making them more volatile when market rates move. Mr Brian Walsh, the bank's

head of derivatives, says many companies last year were engaged in "aggressive hedging" - an apparent contradiction in terms. "In some cases, it probably was [speculation]," he says. Knowing this, was the bank right to sell such instruments to non-financial companies? According to Mr Walsh, leveraged swaps were only sold to companies with sophisticated treasury departments capable of understanding

and managing the risks. Mr Sanford, meanwhile, says the bank will follow a "belt and braces" approach in future, taking extra care to ensure companies understand what they are buying. With regulators breath-

reveals US bank's Achilles heel

atives sales force more closely. For a bank that has been at the forefront of developments in the derivatives markets, putting the brakes on ambitious staff could cause problems. Mr Sanford, who has himself been something of a visionary in the growth of deriva-

tives, says: "I hope we will always be an innovative company with good products."
Second, does the failure of the leveraged swaps reveal a deeper weakness in Bankers Trust's ability to manage financial risk?

"They didn't work out as well as we'd like," says Mr Sanford of the disputed contracts. But he adds: "In the rest of the derivatives business and the rest of the bank, we didn't feel any problems" from the upheaval in financial markets this year.

ertainly, the bank's management of risk in its own trading business this year has been more effective than many other big traders, whether hedge funds or other banks though it failed to repeat last year's \$1.6bn of revenues from trading, much of it from propri-

"We've outperformed most of our competitors with a 15-16 per cent return on equity, even with a big capital base," says Mr Sanford. "If this is our low year, that's not at all bad." For now. the bank has pulled in its horns, withdrawing much of its capital from proprietary trading though it expects to return in

force when conditions improve. Third, do the cases reveal a deeper weakness - a lack of the sort of lasting relationships with big US companies that will support its business in future? While the bank has made a successful business out of raising finance ing down its neck, the bank is for below-investment grade comlikely to seek to control its deriv- panies, its dealings with big com- using derivatives."

panies have tended to come either through its trading business, or through its trust and custody business.

Mr Sanford concedes: "Our history has been not having a strong relationship with the top tier of corporations." He adds, though, that the bank has made headway in recent years in this area. The bank's relationship with Procter & Gamble was not han-

dled by a single relationship manager. That is not surprising, given that Bankers Trust claims to have sold derivatives to 3,100 different entities over the years. "With all these counterparties, there will be lots where the relationship is at the product management end." says Mr Sanford. But as the leveraged swap experience is showing, that strategy can break down when product

managers are loosely controlled. For now, Bankers Trust's headaches seem to confirm the scepticism that has dogged it through the 1990s. Despite a spectacular post-tax return on capital of more than 20 per cent in each of the past four years, the bank's shares have consistently traded at a discount to its peers

Mr Sanford is unapologetic. The bank will not change its strategic direction, he says. The case for derivatives - that they provide a way to manage risks more effectively, whether for companies, investors or banks - stands.

"I don't see it slacking off in intellectual or practical intensity," he says. "It's a technique for risk management that is so efficient, I don't think that it will slow down.'

In its lawsuit against the bank, even P&G talks of the way derivatives can hold down borrowing costs or reduce risk. Says Mr Sanford: "Most senior managers (in corporates] are now locked into

INTERNATIONAL COMPANIES AND FINANCE

Hoechst sees market value doubling by year 2000

By Christopher Parkes and Daniel Green in Frankfurt

The stock market value of Germany's Hoechst chemicals and drugs group will double by the end of the decade, following restructuring and a management shake-out, Mr Jürgen Dormann, chairman said

Mr Dormann, who has made wide changes in management and operations since taking over in May, also aims to double sales in Asia from 10 per cent to 20 per cent of group

Outlining his ambitious programme, he told the Financial he would continue looking for a further "two or three" mid-sized pharmaceuticals companies to add to Hoechst's recently-acquired US interests in generic drugs. However, he would wait

until prices became more reasonable. Hoechst had "perhaps" paid too high a premium in last year's purchase for \$546m of a 51 per cent stake in Copley, a US generic drugs maker, he said.

Industrial gas production would be expanded with a newly-approved scheme to invest DM500m (\$327.22m) in the company's Messer Griesheim sub-

Hoechst had taken a risk spending heavily on moving into emerging east European markets, but all its new businesses there had become profitable within 12 to 18 months of start-up. Negotiations were under way for several joint ventures in China.

In one of the chemical industry's most persistent problem sectors, Mr Dormann said further measures might be necessary to reinforce Hoechst's restructured PVC production. Most of its operations were merged last year with those of Wacker of Germany into a new company. Vinnolit, which accounts for some 10 per cent of west European production capacity. But this was not enough, Mr Dormann indicated, and there could be room for a third partner.

Combined with structural changes effective from January 1, which will reduce the number of operating divisions from 15 to seven and transfer responsibility for divisional strategy and profits to their managers, the result would be "a doubling of our share price by 2000", Mr Dormann said.

He also revealed he was reconsidering his plans, drawn up in his previous job as chief financial officer, for an initial public offering of shares in the US subsidiary, Hoechst Celanese. An international placing of shares in electrodes subsid-iary Sigri Great Lakes Carbon, however, was still set for next

The placement plan for Cela-nese was originally intended to consolidate its independent status, but Mr Dormann said his decentralisation project should serve the same purpose. We will know in another 12

Schering chief forecasts annual profits ahead 10% at DM310m

By Judy Dempsey in Berlin

Profits at Schering, the German pharmaceuticals group, will rise this year by 10 per cent to DM310m (\$202m) and turnover by between 12 per cent and 14 per cent, Mr Giuseppe Vita, board chairman. said yesterday. He said the dividend would "at least" match last year's DM14.22.

Mr Klaus Pohle, chief financial officer, said he expected group sales to increase by about 8 per cent a year until the end of the century, more than 4 percentage points higher than the industry's expected average growth. This would boost Schering's turnover to DM7bn-DM8bn.

Growth is attributed to the wider marketing of the Betaseron drug, a treatment for multiple sclerosis; the introduction of Levovist, an ultrasound drug: and the recent decision to refocus on pharmaceuticals. In the first nine months of this year, net profits rose 8 per Share price (DM)

cent to DM210m, compared with the same period in 1993, while turnover increased by 14 per cent to DM3.52bn. Net profits for the whole of 1993 totalled DM254m, with turnover at DM5.3bn.

The optimistic forecasts for the next five years stem from Schering's decision two years

ago to divest its industrial chemicals and natural substances divisions, and hive off its agro-chemical divisions into

which took effect last January. Mr Vita said he expected the Betaseron drug, currently only on sale in the US, to obtain approval for distribution in Canada in the middle of next year, as well as in some Euro-

"We expect turnover of Betaseron to increase to DM350m by the end of this vear." he said. Turnover for the first nine months totalled DM230m. The Levovist drug would boost sales by between DM300m and DM500m.

Turnover for Cyproteronace-tat, or CPA, a drug containing hormonal treatments and which is used for contraceptives, fell 3 per cent between September and October following unconfirmed reports that the drug contained a carcinogen, a substance that encourages the growth of cancer.

Groups bid for Spanish telecoms licence

consortia, both predominantly backed by domestic capital and each including foreign operators, entered their bids yesterday for Spain's second mobile telephone licence. The licence will be awarded by the Spanish government before the end of

The competition pits the Cometa-SRM consortium, which has Banco Bilbao Vizcaya as its biggest individual shareholder, against Airtel-Sistelcom-Raditel backed by Banco Central Hispano and Banco Santander.

The contest to operate a Global System for Mobiles (GSM) mobile digital network, which will compete with one reserved for Telefónica, the state-controlled communications group, is the first big step in a deregulation package which, over the next three years, will introduce cable television and end Telefónica's monopoly as a national basic

telephony operator.
"This is the most significant investment challenge in Spain to date because it involves the break-up of voice monopoly." said Mr Claudio Boada, managing director in Spain of the US investment bank Lehman Brothers, which is advising the transport and communications ministry.

The bid is one of the biggest domestic investment outlays on record to capture what is regarded as a very high growth market. There are some 400,000 subscribers for l'elefónica's existing analogue cellular system. Mr Boada believes that over the next 10 years the GSM system will win a 12 per cent market penetration in Spain and 4m subscrib-

The consortia must bid a minimum of Pta50bn (\$393m) to obtain the licence, but analysts believe the real net value of the licence could be some Pta160bn. The winning consortium will then face an initial investment of some Pta120bn. Officials say the bids will begin to be reviewed next week, and the deciston will be group has a 46.3 per cent stake, announced by December 31.

UBS holders urged to reject change

Union Bank of Switzerland shareholders have been recommended to vote against the board's controversial proposal to convert its registered shares into bearers. The advice, in what is a setback for UBS, comes from a leading US adviser to institutional investors on corporate governance

Institutional Shareholder Services (ISS), a proxy advisory service, said the UBS board's proposal, which will be put to an extraordinary meeting of shareholders next Tues-

basic company structures should not be altered in the midst of a battle over control. The governance of UBS is

being challenged by BK Vision, an investment company that is its largest shareholder. BK, controlled by maverick Zurich broker Mr Martin Ebner, is seeking to rally a majority of shareholder votes at the next meral shareholders' meeting in April to make substantial changes to the bank's board and strategy.

UBS has claimed the challenge had an unfair chance of succeeding because its backers

were accumulating large num-

bers of registered shares. The par value on the registered shares is one fifth that of the bearers. Investors can thus acquire votes more cheaply by buying registered shares than by buying bearers. ISS, founded 10 years ago by

Mr Bob Monks, a pioneer of the US corporate governance movement, said the move by the bank to strip the registered shares of their extra voting power without compensation was unacceptable.

While we agree that allowing any shareholder to influence or control the bank with-

out controlling a majority of its share capital would be improper, allowing the bank disenfranchise and tomic descriptions. nomic damage to a whole class of shareholders because of a dispute about strategy with one individual is also improper," ISS said.

Viacom

in third

sibase acq

a warm

The recommendation from ISS, which provides advice on worldwide proxy voting for some 75 institutional investors, is a setback for UBS.

The bank is counting heavily on the support of non-Swiss shareholders; saying as holders benefit if the motion is passed.

BMW's US plant first in global network

By John Griffiths in Spartanburg, South Carolina

BMW is to open a new \$600m car manufacturing facility in the US today. Mr Berndt Pischetsrieder, chairman, described the Spartanburg plant yesterday as "only the first" of a global network of manufacturing sites which will preclude further expansion in Germany.

BMW sees the plant as by far the single most important manufacturing step it has taken outside of Europe.

Mr Pischetsrieder insisted

the plant, where 570 employees earn little more than one-half of their German counterparts, and which - on current exchange rates - has costs some 30 per cent lower, was not a signal that BMW was 'emigrating" from manufacturing in Germany. However BMW's four exist-

seeable demand for its cars in Europe, within its strategy of remaining an "exclusive" carmaker with a world market

share of around 2 per cent. "We don't want to grow in Europe," said Mr Pischetsrieder. BMW would now concentrate on developing a global component supply infrastructure and manufacturing network for the BMW and Rover brands, he said.

BMW has declared a long-term goal of producing 90,000 cars a year at the US plant, probably before the end ing plants could meet all foreof the decade. But according to Dr Helmut Panke, chairman and chief executive of BMW (US) Holding, and in charge of all BMW's North American activities, the plant may have to expand further - to 120,000 or 130,000 units annually - if

BMW is to achieve the full benefits of flexibility within a global production system In the long run there will be other opportunities . . . that's why we have a 1,000-acre (Spar-

tanburg) site."
Although only being formally opened today, the plant has been in limited production since September. It is making only 12 cars a day but this is due to rise to 150 a day by the day in 1996. Initial production is of 3-series saloons, to be joined by a new open two seater next September.

Elektrowatt net income falls just short of record

Elektrowatt, the Swiss power generation and engineering group, said net income in the year to September 1994 was slightly below the previous year's record SFr212m (\$165m). No figure was given.

Mr Oskar Ronner, chief executive, said the group was hit hard by the strength of the Swiss franc. Consolidated sales rose only 3 per cent to SFr4.9bn and new orders were up 8 per cent. He added that the group

would at least maintain its dividend and held out the possibility of a special bonus payment in recognition of its jubilee. Elektrowatt, in which the CS

Holding financial services

were 4 per cent higher at

The engineering and contracting division lifted sales 6 per cent to SFr900m, but incurred a loss because of provisions on two projects.

 Holderbank Financière Glarus, the world's largest cement producer, expects consolidated net income to jump 48.1 per cent to SFr425m in 1994, due to improved results of subsidiaries in Europe and North America. Net sales would rise 3.2 per cent to SFr8.7bn, with shipments of cement and clinker rising 6.5 per cent to 49.2m tonnes, it said.

Mr Thomas Schmidheiny, chairman, said Holderbank planned to launch a programme of American depositary receipts in the US next

Tabacalera looks abroad for expansion targets Tabacalera, the Spanish (\$106m) from Pta6.4bn in the

tobacco group, said it was actively looking at several overseas markets to identify expansion opportunities, Reuter reports from Madrid.
"We are looking at the fast-

est growing markets which would be the most interesting for us," said Mr Calixto Rios, financial director, announcing a 104 per cent improvement in group nine-month pre-tax

It set up a joint venture this year with ZPT Radom in Poland, where it produces its new Winns brand. Cigarette consumption in Spain is falling by 0.7-1.0 per cent a year, he said. Eastern Europe, Latin America and Asia, however, offer potential for growth.

The group's nine-month pretax profits rose to Ptal3.05bn same period last year, as sales of premium brands rose due to a crackdown on smuggling. Costs fell as a result of lay-offs. Group net sales rose to

Pta535.77bm from Pta456.3bm. Sales of the top of the range Philip Morris and Reynolds brands, such as Marlboro and Winston, which Tabacalera makes under licence, were particularly buoyant. These are the types most popular with

"The results have evolved very much in line with expectations. We hope the final quarter will be similar and we are sticking to our original forecasts," Mr Rios said.

The company expects to cut the workforce by 750 people, or nearly 9 per cent, by the end of the year.

(This announcement appears as a matter of record only).

Bébéar keeps Axa on the global track

INTERNATIONAL COMPANIES AND FINANCE

Viacom profits up seven-fold in third quarter

By Tony Jackson in New York

Acquisitions helped Viacom, the fast-growing US entertain-ment and media group, to a seven-fold rise in earnings a share in the third quarter.

The results included a firsttime contribution from Paramount Communications. acquired for \$9.6bn earlier this

However, they have yet to reflect Viacom's \$8.4bn acquisition of Blockbuster, the video and music retailer, or its \$1.1bn sale of Madison Square Garden.

Net earnings were \$327.3m. compared with \$30.9m, before extraordinary items, and earnings a share were \$1.32 against 18 cents. Sales in the quarter were \$2.1bn, up from \$508m

Mr Frank Biondi, president, said the inclusion of Blockbuster would improve results further. "Our prospects for the fully integrated company, when all our operations are reflected and we begin to benefit from the many cross-divisional activities now under way, are tremendously promis-

Blockbuster's sales in the the start of the year.

nine months to September were up 42 per cent to \$2.1bn and net profits by 26 per cent to \$360.2m.

Earnings from Viacom's television networks were up strongly, largely because of higher advertising rates and subscription revenues. However, profits from cable TV fell by 33 per cent, after a 12 per cent fall in the previous year, as a result of government-imposed cuts in cable rates.

Among the activities acquired with Paramount, feature films earned \$86m on sales of \$431m in the quarter (no comparable figures were

Viacom said the quarter had been helped by such US releases as Naked Gun 33% and Porrest Gump. Television programming earned \$18.7m, affected by lower syndication sales. Paramount Parks earned \$30.3m, affected by lower attendances and higher costs.

The publishing division, also acquired with Paramount, earned \$175m on sales of \$701m. Results were helped by Paramount's own \$553m purchase of Macmillan, part of the bankrupt Maxwell empire, at

Molson to dispose of retail

cleaning-services subsidiary, would push earnings for the

Molson owns the Montreal Canadiens, last year's champion hockey team, as well as the arena where it plays. A dispute over players' salaries has led to an indefinite postponment of the start of this

executive, said yesterday Mol-son would leave the retail sector "in an orderly fashion" over the next year or two. The retail interests, which include three chains of

entially French.

Axa wasted no time expanding internationally. Once in charge, Mr Bébéar quickly began a merger and acquisition programme, first domestically and then abroad. "I was convinced that one day the

"You could survive then with a small business. That is less and less true Companies are becoming bigger, and laws and liabilities more complex. Even small businesses are selling products outside France. The market is becoming more concentrated. You have to be able to follow your customer."

While arguing for diversification to reduce dependency on a single economy, he stresses it is important for Axa to remain strong in France. "We need to be among the leaders in a market. It is better not to be in too many markets but strong in a

the future for his business lies in Asia. This summer he began operations in Japan and Axa also has a representative office

Claude Bébéar: 'I had to adapt

in Beijing. "I'm convinced that in 20 or 30 years from now the Asian market will be the biggest in the world," he

The time to go is when the market is starting, so you can grow with the market."

The global vision makes for him to recall a it all the more painful recent visit by a US credit rat-ing agency which raised concerns about Axa's French casualty business when it

the group's business. "We are seen as a French company," he says. "We want to show that we are becoming more and more global."

This helps explain why he is keen to have stock market list-ings for Axa: first in New York next year, and then probably in London and Tokyo by 1997 at the latest. "It is important to raise money elsewhere," he says. "The French market is too small, and US pension funds prefer to invest in a com-

pany quoted there." His sensitivity to being perceived as running an essentially French company is also reflected in a \$9m-a-year advertising campaign launched last month and aimed at international decision-makers.

He acknowledges, however, that some foreign investors are suspicious of the fact that Axa is controlled through a complex structure. Only 49 per cent is publicly held and the remainder is with seven insurance mutuals and several cross-shareholdings, which pre-

vents any risk of takeover. "I am very happy with the arrangement," he says. "We are not in danger, no one can buy us. It means we can invest even if we know the market is against us or unable to understand us. It keeps us out of the reach of raiders."

He does not rule out the pos-

controlling shareholding of the mutuals, but is concerned that this could lead to a takeover. "I

see Mr [Michael] Milken is back in business in the US. As for Axa's future, there is a paradox. Mr Bébéar has become known for developing a group stripped of hierarchy, with authority delegated and formality removed. "We have to tell managers they are not there to give orders to other

people but to help them grow." , n the other hand, the Company is clearly dominated by him. In the early 1980s, just before it became Axa, it was in danger of becoming known as "Groupe Bébéar", as one insider puts it.

"His company is not very hierarchical," says the director of a rival insurer. "But nothing gets done without Bébéar's knowledge or specific approval." That prompts the question of

what happens when he leaves. Now aged 59, he says he plans to start "reducing his involve-ment" from next year. He says no decision has finally been taken on his successor but he has written a letter of recommendation in case anything happens to him unexpectedly. The choice could prove just

as important as any of Axa's international plans.

Sybase acquires software group

By Louise Kehoe in San Francisco

Sybase, a leading supplier of database software for large computer networks, is to acquire Powersoft, a software development tools company, in a stock swap valued at about \$782m.

The acquisition is the latest in a series of software industry mergers over the past year.

"This merger will create the worldwide leader in client/server software," said Mr Mark Hoffman, Sybase chairman, chief executive and president. Sybase and Powersoft were, respectively, market leaders in database software and client/server software development tools, he said.
"The combination of the two

companies strengthens our expertise, distribution, and product solutions to scale from

The acquisition follows long-standing collaborative marketing arrangements

between the two companies. Sybase estimates that a third of its customers use Powersoft software development tools.

Based on figures for the 12 months ended in September, the combined company will have annual revenues of about \$730m, making it the seventh largest software company in the world. With a combined annual growth rate of 75 per cent, it will also be the fastest growing of the top 10 software companies worldwide.

Powersoft's share price soared on news of the acquisition, gaining almost \$12 to trade at \$73% before easing to \$69% in mid-session trading, up from Friday's close of \$61%. Sybase was down \$1% at \$46%. Under the acquisition agree-ment, Powersoft shareholders will receive 1.6 Sybase shares for each Powersoft share.

Powersoft, based in Concord, Massachusetts, will operate as an independent subsidiary of Sybase, which is based in Emeryville, California.

NEWS DIGEST

Kmart hit by warm weather

By Richard Tomkins in New York

Problems at Kmart, the US discount store group, appeared to have worsened yesterday when it reported a fall in aftertax profits from \$104m in last year's depressed third quarter to \$39m this time.

It was the seventh consecutive quarter of earnings decline. However, Kmart had warned last month that profits would be down, and the shares were little changed. In early trading, they were down \$1/4 at Kmart blamed the profits fall

on unusually warm weather in late September and early October, which affected customer rchases of autumn clothing. It said sales in the core discount store division had

strengthened in the quarter as a whole, with revenues up 2.7 per cent at stores that had been open for more than a year. However, the increase failed to translate into profits growth because sales were heavily weighted towards lower-margin goods.

Group revenues rose 9 per cent to \$3.89hn. Net income of \$104m for 1993 excluded \$10m of losses from discontinued operations. On the same basis, earnings per share fell from 22 cents to 8 cents.

Since the end of the quarter, Kmart has sold its 21.5 per cent stake in Coles Myer, the Australian retailer, for \$928m. It has also cut its stake in Office-Max, one of its specialty retailing subsidiaries, from more than 90 per cent to 25 per cent.

Strong sales growth at Toys R Us

Strong growth in domestic sales and a fall in tax charges helped Toys R Us, the US toy retailer, report a 26 per cent increase in net profits in its third quarter to October,

writes Richard Tomkins Net income rose to \$47.4m from \$37.5m, but the comparison was flattered by a one-time tax charge of \$5m in last year's third quarter. Without the charge, profits growth would have been 12 per cent.

Sales rose 13 per cent to \$1.63bn and operating profits, 15 per cent to \$96m. Earnings per share, boosted by the company's stock repurchase programme, rose from 13 to 17 cents, a gain of 31 per cent.

Thomson ahead 18% Thomson Corporation bene-

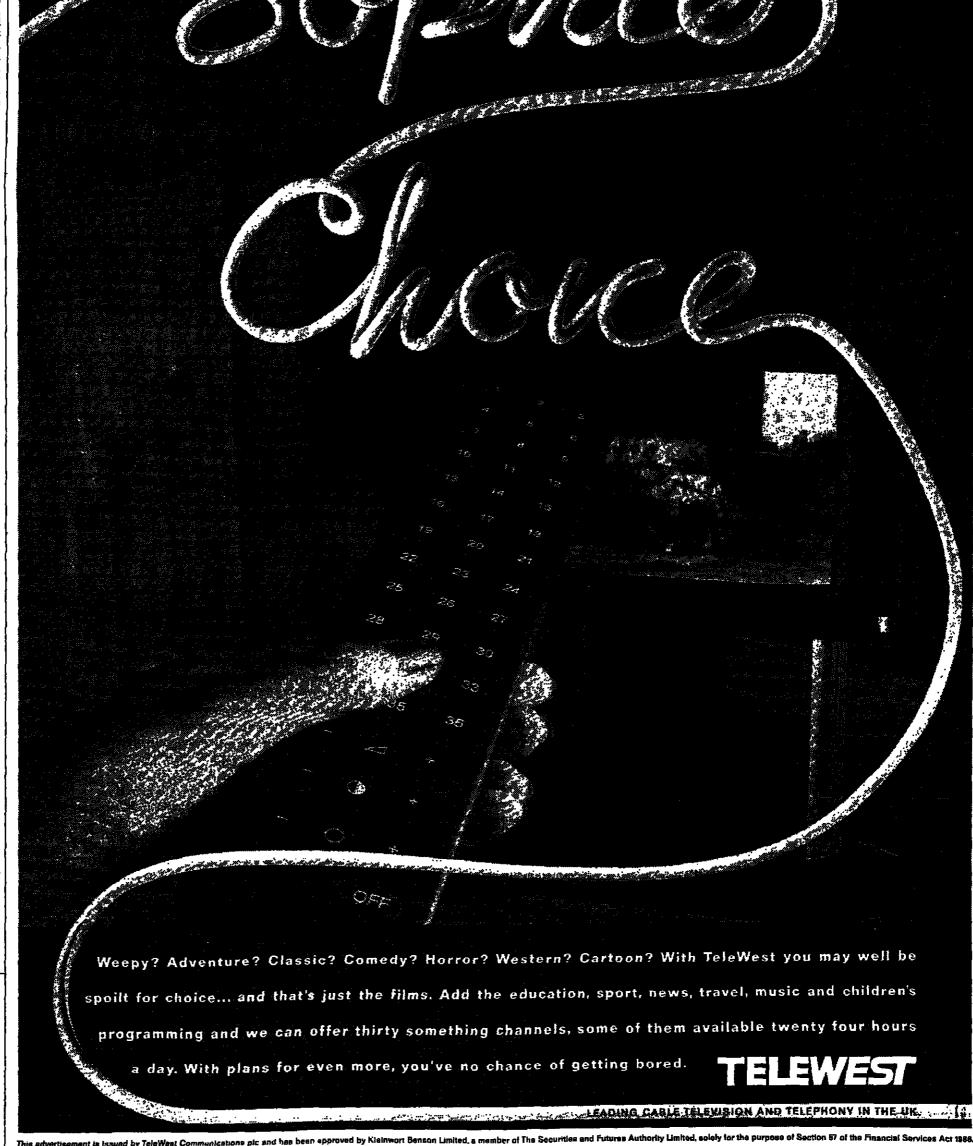

fited from improvements in most of its publishing and travel businesses in the third quarter to post an 18 per cent rise in earnings, writes Bern ard Simon The New York-based com-

pany, controlled by Canada's Thomson family, lifted net earnings to US\$263m, or 45 cents a share, from \$228m, or 39 cents, a year earlier. Sales rose to \$2.04bn from \$1.86bn.

Thomson Travel's operating profits climbed 15.5 per cent to \$164m. Its UK package-tour subsidiary achieved a 16 per cent rise in bookings last summer. Lamn Poly, the UK travel agency chain, is estimated to have boosted its market share by one percentage point, to 25 per cent. Operating earnings at the information and publishing division climbed 21 per cent.

A listing in the time of calamity

Hanover Re has a lot riding on its partial float, writes Andrew Fisher

The first stock market listing of a German reinyears - that of Hanover Re, to raise DM530m (\$353m) - comes at a time of more frequent natural disasters, higher premiums and a more selective approach in the industry to new business.

The issue is also one of the first with shares in nominal DM5 units instead of the usual DM50. These are now allowed under regulations aimed at encouraging private investors Switzerland, shares in Germany are the most expensive in Europe.

With its sister company, Eisen und Stahl Rückversicherung, Hanover Re is Germany's second largest and the world's fifth largest reinsurance concern. The new issue, in which 25 per cent of the capital is being sold, is the seventh largest in Germany since Hanover Re and the issuing

consortium, headed by Commerzbank, hope to convince German and foreign investors that the company's policy of forgoing growth in premium income in high-risk areas and concentrating on profitability will continue to pay off. In deference to some analysts who thought the issue

price might be too high for

many investors, especially for-

eigners, the voting shares are

offered at DM75 each for subscription from November 18 to 22. Some initial estimates were nearer DM90. Mr Erich Coenen, a Commerzbank director, said yesterday the issue price was attractive, both "optically" compared

with the high price of other

reinsurance groups - Munich

Michael Reischel: 'industry

cannot create money by magic'

Re stood at DM2,750 - and "analytically": the price-earn-ings ratio of 15.8 based on expected 1995 earnings is well under the German sector aver-With Eisen und Stahl, which is more domestically-oriented

than Hanover Re, gross premium income last year was DM5.3bn, a rise of 30 per cent. The underwriting loss fell to DM122m from DM263m and net profits shot up by nearly 200 per cent to DM125m. Group investments totalled DM10.3bn. Mr Michael Reischel, Han-

Net earnings (DM m)

over Re's chief executive, does not expect growth to be as spectacular this year or next. "We have grown enormously over the past three years," he said. But the group had resisted the temptation to expand liabīlity levels – risks

are simply too high in certain areas. "So we expect lower growth over the next few years. We are cutting back where necessary," says Mr Reischel The message is the same as

that last week from Munich

Re, the world's biggest reinsur-

ance concern. Because disasters such as earthquakes, floods and typhoons have become more frequent, premiums have escalated. "Assets are more highly concentrated," said Mr Reischel "Fifteen years ago, Hurricane Andrew in Florida would have caused a

lot less damage." The hurricane was the largest disaster, in terms of insured damage, to have hit the industry. January's earthquake near Los Angeles was the second worst.

s an example of risk areas where premiums have tended to rise steeply, Mr Reischel cites Japan where Typhoon Mireille caused heavy damage in 1991. "The trend for natural disas-

ters seems to be on the rise,"

says Mr Reischel. More damage

and more insurance payouts are definitely to be expected. Because the industry spreads its exposure internationally, this trend affects premiums in all sectors, not just those where the risk is severest.

"Insurance customers, whether

private or corporate, have to

pay more if they want cover," says Mr Reischel. "The reinsurance :industry can't- create at pre-tax le

yo rear battle

CARANT OF TEXAS

money by magic." In the five years to 1993, premiums paid for worldwide catastrophe risks totalled nearly \$20bn, says Mr Herbert Haas, a director of Hanover Re. Damage payouts totalled just over \$18bn, but brokerage, interest and other costs pushed this up to \$25bn, leaving the industry with an overall defi-

Thus, many reinsurers and primary insurance companies have pulled out or been forced out of the reinsurance business. Mr Reischel puts the figure at more than 100 since 1990. New reinsurance capacity is available from Bermuda, but Mr Reischel sees this as positive - "since new investors are only looking for returns, they will hopefully prevent a rates

Because it was founded as recently as 1966, he says Hanover Re has been spared some of the worst calamities, such as claims on asbestos or pollution liability. It has also kept out of the over-crowded London and Singapore reinsurance marpresence in Asia and Australia, where growth is high.

The company has no acquisi tions in mind after buying NRG Victory Australia Life Reinsurance last year.

Hanover Re will use its DM230m share of the issue proceeds to lift its 4 per cent stake in Eisen und Stahl, with which it does business on a group basis, to a 53.9 per cent majority holding. The remainder will go to its parent, Haftpflichtverband der Deutschen Industrie (HDI), a mutually-owned

Czechoslovak Airlines seeks local investor

By Vincent Boland in Prague

Czechoslovak Airlines is about to enter talks with Czech financial institutions that could lead to a new shareholder injecting fresh capital into the loss-

making carrier. The move follows the withdrawal of Air France from an investment in CSA in March. The new investor is likely to

acquire part or all of the 49 per cent stake in CSA held by the Czech National Property Fund, the government body that owns shares in companies

being privatised. Mr František Slabý, CSA's executive vice-president for finance and planning, said the airline had abandoned its search for a single strategic partner to replace Air France,

with a local investor. "There are [Czech] institu-

financial partners of CSA," he said. "The partner would be from the financial sector but not necessarily a bank."

Mr Slaby declined to say who the potential local investors might be. However, one local institution likely to be

and was seeking an alliance approached is Ceská Pojišťovna, the largest Czech insurance company, which has

a 4.5 per cent stake in CSA. The Consolidation Bank, the state-owned "hospital bank" that manages much of the bad debt of newly-privatised Czech companies, and which holds the 19.1 per cent stake in CSA formerly held by Air France.

All of these securities having been sold, this advertisement appears as a matter of record only.

NEWS DIGEST

Cost-cutting spurs cent, to 50 per cent, at no net cost to itself. The struggle for Lisheen developed because Austrian utility at pre-tax level

Energie-Versorgung Niederösterreich (EVN), a leading Austrian energy utility, lifted pre-tax profits by 20.6 per cent to Schl.08bn (\$100.3m) in the year to August 31 1994, mainly because of cost-cutting, writes Ian Rodger in Zurich.
Revenues of the company, 49 per cent of which has been privatised, advanced only 2.1 per cent to Sch10.5bn, reflecting the negative impact of warmer temperatures on energy sales. Also, gas sales declined because high rainfall enabled local utilities to buy or generate more of their needs from hydro sources.

Revenues from electricity sales were up 19 per cent to Sch7.1bn, while gas sales eased 0.9 per cent to Sch2.89bn. Heating sales jumped 32.9 per cent to Sch97m, due to the takeover of heating services for the city of Baden and other extraordinary factors.

EVN attributed the surge in pre-tax profits to increased volumes, improvements in energy efficiency and strict cost management. The average number of full-time employees in the year dropped 5.7 per cent to 2.884.

The company has agreed further contacts

with electricity and gas utilities in the Czech Republic, Slovakia and Hungary, and has declared its interest in acquiring stakes when they are privatised.

Assuming that strong economic growth continued in the company's operating territory of Lower Austria, the outlook for next year's earnings was "promising", the company said.

JR West listing decision this week

Japan's transport ministry will decide this week whether to go ahead with the listing of West Japan Railway (JR West) as originally planned, Reuter reports from Tokyo.

The government is considering whether to list JR West on Japan's stock exchanges before the end of the current fiscal year next March, transport vice-minister Mr Michibiko Matsuo was quoted by a ministry spokesman as telling a news conference.

"We are in a difficult situation, but we will make a decision soon, probably by the end of this week." Mr Matsuo was quoted as saying. JR West applied in August to be listed on six Japanese exchanges, including the Tokyo Stock Exchange and Osaka Securities

Exchange.

Most stock market participants expect the JR West listing to be postponed following the unsuccessful October 27 listing of another government entity, Japan Tobacco.

Japan Tobacco was offered to the public at Y1.44m, but failed to close above its initial offering price on its first trading day. It has continued falling since then and ended at Y961,000 on Monday.

Minorco wins battle for Lisheen project

A bitter battle for control of the Lisheen project in County Tipperary, Ireland, the sec-ond-largest zinc-lead deposit in Europe, has ended in victory for Minorco, the overseas investment arm of the Anglo American-De Beers group of South Africa, and Ivernia West,

a junior Irish company, writes Kenneth Gooding. Minorco has paid Ivernia \$77m to acquire 50 per cent and management control of Lisheen. lvernia immediately beforehand paid \$77m cash to Chevron to buy the US oil group's 52.5 per cent stake. Ivernia says it thereby has lifted its share of the Lisheen project by 2.5 per

The struggle for Lisheen developed because Chevron in 1992 agreed to sell its controlling stake to Lac Minerals of Canada. Ivernia claimed to have pre-emptive rights over Chev-

ron's shareholding.

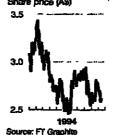

But this claim had to be tested in the Irish High Court which in September ruled in Ivernia's favour.

Lisheen is expected to have a life of 13 to 15 years producing an annual 155,000 tonnes of zinc, at a relatively low cash cost of 30 cents a lb. Capital expenditure is estimated at US\$184m and start-up is scheduled for early

Minorco owns 24.5 per cent of Ivernia, as does Outokumpu, the Finnish resources group.

News Corp 'lifts stake' in John Fairfax

global media group, has lifted its stake in John Fairfax Holdings to about 3 per cent. according to an article in the Fairfax-owned Australian Financial Review newspaper, Reuter reports from Sydney. The Financial Review said News Corp was understood to have bought 7.3m shares, representing about 1 per cent of

Mr Rupert Murdoch's

In July, News Corp revealed it had bought a stake in Australia's oldest newspaper publisher. The total stake is below the 5 per cent substantial shareholder notice that has to be lodged with the Australian Stock Exchange. Fairfax is 15 per cent owned by Mr Kerry Packer's Publishing and Broadcasting and 25 per cent by Mr Conrad Black's The Telegraph group in the UK.

Growth at Portuguese telecoms operators

Companhia Portuguesa Radio Marconi, Portugal's intercontinental telecommunications operator, posted a 52.2 per cent increase in net profits to Es4.72bn (\$37.2m) for the first nine months of 1994 compared with the same period last year, writes Peter Wise in Lisbon.

Marconi, which is 51 per cent state-owned, attributed the rise to the beneficial effects of tariff reductions, cost-cutting and returns on international investments.

Meanwhile, Portugal Telecom (PT), the state-owned global operator formed from a merger of three companies in July, reported a a first-half net profit of Es8.1bn on a turnover

of Es155.9bn. Marconi is to be integrated into PT by the end of the year, before the partial privation of the new group in 1995. The government has shareholders, mainly US and UK institutional investors, are to be compensated.

Options at Warburg

Liffe has announced that S.G. Warburg has been approved to make a market in equity options, bringing to 11 the total number of market makers at the exch

ard Lapper in London. Warburg will today begin making a market in 36 equity options. It will operate as an "assigned market maker", in which it is committed to a continual presence in the pit for the purpose of making and updating two-way prices in 16 equity options.

Pakistan Privatization of Kot Addu 1,600 MW Thermal Power Station Water and Power Development Authority

The Government of Pakistan announces the commencement of a competitive process to select an eligible investor or consortium to acquire a 26% equity interest and management control in the Kot Addu Thermal Power Station. Kot Addu is a multi-faceted facility which will have a total capacity of approximately 1,600 MW upon completion of additional capacity scheduled for mid-1995.

Prospective investors are asked to express their interest in order to receive the Request for Qualification which will be available from November 20, 1994. Upon qualification, bidding instructions and access to detailed due diligence materials will be provided. Qualification will be based principally on relevant experience and credentials in operating similar facilities in addition to financial strength.

The Government of Pakistan has engaged CS First Boston to act as its financial advisor in all aspects of the selection process. BMA Capital Management is assisting CS First Boston in this effort. Expressions of interest should be submitted to Mr. James Bartlett, CS First Boston, at the address below. Enquiries may be directed to any of the following representatives:

Barlow improves on forecasts | Air NZ expects to top by boosting net profits 47.8%

By Mark Suzman in Johannesburg

Barlow Limited, the rump of South African conglomerate Barlow Rand, which was unbundled last year, has improved on initial forecasts by reporting after-tax profit of R412.4m (\$117m) for the year ended September, a rise of 47.8 per cent from the pro forma Fairfax, earlier this month for A\$23m figures of R279m for the previ-

In spite of the sale of several businesses during the year, especially in its troubled offshore subsidiary, UK-based J. Bibby & Sons, turnover rose to R12.87bn, up from R11.76bn

previously. Operating profit rose by 72.6 per cent to R405.2m from R234.8m while interest paid dropped to R178.3m from

The group's balance sheet remains sound, with the debt/ equity ratio at a comfortable 13.4 per cent and cash in hand of some R707m

Barlow's successful launch of a \$75m international bond issue also testified to the company's growing international profile.

Mr Warren Clewlow, chairman, said the results reflected a stronger mangement focus in the reconstituted group. He noted that Barlow had also benefited from the upturn in the domestic trading environment during the second half of the year following the South African elections in April.

The largest contributor to earnings was Pretoria Portland Cement, which benefited from increased demand for cement and lime products.

Both PPC and construction subsidiary Federated-Blaikie, which also improved in the second half, are expected to achieve higher volumes over the coming year as a result of the government's large-scale, housing programme.

At the same time, increased demand for earthmoving equip-ment helped Barlows Equipment to boost earnings while paint division Plascon also performed satisfactorily. But Barlows Consumer Electric Products continued to suffer from a depressed consumer appliance market, and J. Bibby's improved bottom line came only after a major restructuring, involving the sale of noncore assets to offset heavy losses in operations in Spain

and Portugal. Mr Clewlow predicted that the coming year would see a continued improvement in group earnings given the reduction in overseas borrowings and the group's appointment as Caterpillar dealer in four additional African

37% gain in earnings

By Terry Hall in Wellington

Air New Zealand expects profits for the current year to exceed comfortably the 37 per cent rise in tax-paid earnings to NZ\$190m (US\$118m) achieved in the 12 months to last June, Mr Bob Matthew, chairman, told yesterday's annual meeting in Wellington. He said the company expec-

ted to expand its international passenger capacity by more than 16 per cent this financial year. This would primarily stem from the introduction of new non-stop services between Los Angeles and Sydney en route to New Zealand, and new links from Brisbane to the new Japanese airport, Kansai.

Mr Matthew criticised Canberra for this month's decision to suspend unilaterally the single market aviation agreement with New Zealand, one week before Air New Zealand was due to have started domestic

services within Australia. He said Australian travellers should not "buy their government's outrageous proposition" that either Air New Zealand or its government was to blame for the collapse of the agreement, which would have brought downward pressures

on Australian air fares. Mr Matthew added that both airline and government had maintained an unprovocative stance "throughout this remarkable sequence of events", in spite of Australian initiatives to angle the competitive environment in favour of Ansett and Qantas, the Australian carriers.

"Matters must be put right if Air New Zealand is not to find itself commercially disadvantaged," he said. "We hope we will not need to seek recourse by way of the various remedies available to us under the original agreement to which both governments are signatories."

These leading Asian companies selected Bankers Trust as a lead manager when raising equityrelated capital in the global markets. Bankers Trust's innovative structuring and distribution capabilities, and commitment to secondary market liquidity, resulted in these and other equity offerings for clients in the emerging markets of Asia, Latin America and Europe.

Treasuries edge higher ahead of Fed meeting

By Lisa Bransten in New York and Martin Brice in London

US Treasury prices edged higher yesterday morning following a rising dollar, but the rallying currency failed to spark a large increase in bond prices as traders waited for news of interest rate policy to emerge from today's meeting of the Federal Reserve's open

By midday, the benchmark 30-year government bond was up 1 at 921, yielding 8.126 per cent. At the short end, the twoyear note was up ≟ at 99⅓, to yield 7.046 per cent.

The dollar made strong gains against the Japanese yen and the D-Mark early yesterday morning, rising nearly a full yen to Y98.34 and more than a plennig to DM1.5437.

However, the market was more interested in today's Federal Reserve meeting. A majority of traders and market analysts expect the Fed to lift the target federal funds rate by 50 basis points to 5% per cent at the meeting, and most say that such an increase has already been factored into the markets.

Inaction by the Fed could cause prices to tumble, while an increase of 50 or more basis points should cheer the market, which is looking for signs that the central bank is committed to taking a tough stance against inflation. Some fear, however, that a 50-point increase could disappoint the

In addition to word from the Fed on interest rates, traders will take note of a series of other economic statistics due today, including figures on October's retail sales, industrial production and capacity

Most analysts expect both retail sales and industrial pro-

duction to be up 0.5 per cent; GOVERNMENT BONDS

capacity utilisation - the amount of capital stock being used to produce goods - is anticipated to be 84.8 per cent.

■ European government bond markets followed US Treasuries slightly higher yester-day, with most investors staying on the sidelines, waiting for the impact on US interest rates of today's Federal

■ German government bonds edged up in the wake of Treasuries, and the December bund futures contract ended at 90.22, up 0.15 on the day.

Mr Paul Compayne, bond strategist at Paribas Capital Markets, said: "We are seeing most of the markets being cautious ahead of the FOMC meeting. That meeting will determine where markets will go over the next few weeks." He added that most participants were already discounting a 50 basis point rise in US interest rates, saying: "If there

■ The UK government bonds market remained nervous ahead of the FOMC meeting and a raft of UK data to be

is no Fed action as a result of

the meeting, then markets will

published tomorrow. However, gilts prices were lifted by the rise in US Treasuries and a rumour that the CBI distributive trades survey, which is due to be published today, would show that the recovery

Analysts were digesting the suggestion that the balance of UK retailers who had seen a rise in sales in the past year had fallen to a negative 3 per cent from a positive figure of 28 per cent.

is faltering.

■ Swedish bonds put in a strong performance on the back of the "yes" vote in the European Union referendum. with the yield on the benchmark 11-year bond falling 23 basis points to 10.88 per cent. On Thursday last week it was yielding 11.43 per cent.

Mr Paul Donovan at UBS said that the Swedish vote was likely to support other Scandinavian bond markets, with Norwegian bonds strengthening on prospects for its entry after the vote on November 28 and Danish bonds benefiting from international capital inflows to the Scandinavian

He added that the possibility of a downgrade of Sweden's credit rating by Moody's Investors Service, the US credit rating agency, remained a threat but that fiscal tightening might avert this.

He said: "There is a perception that EU membership will provide an external fiscal constraint on the government. Investors will now look for further fiscal tightening through spending cuts."

First closure of Peregrine fund

By Richard Lapper

Peregrine Investments Holdings, the Hong Kong-based investment bank, yesterday announced the "first closure" at \$500m of its Asian Infrastructure Fund and gave details of its investments.

The fund, which was launched earlier this year, will invest in Asian telecommunications, transport and power plants, underlining a growing trend towards private financing of infrastructure, especially in the emerging markets.

It has already raised some \$590m. is well on track to meet a target of \$1bn by the time of its final closure next year and should eventually match in size the AIG Asian Infrastructure Fund, which closed in June with \$1,086m committed.

Peregrine's fund is co-sponsored by Frank Russell Company, the International Finance Corporation, the Asian Development Bank and investors associated with Mr George

Soros' Quantum Fund. Its advisory board is chaired

by Mr Gordon Wu, the Hong Kong entrepreneur who runs Hopewell Holdings, the property and infrastructure con· Herrigal Charges

glomerate. Three of the fund's initial investments are in Consolidated Electric Power Asia companies, a group controlled by Hopewell, with \$50m each to be channelled to CEPA units in Indonesia, Pakistan and India.

The fund has also committed to four other projects; an initial \$26m in a 108km four-lane toll road linking Chengdu in Sichnan with Mianyang, up to \$50m in a telecommunications project providing broad hand digital transmissions between Europe and east Asia; and up to \$75m in a 235mW combined cycle power station in Andhra Pradesh, in India.

The utilities in which the fund is investing offer "stable and predictable cashflows, but because these economies are growing so quickly they do have the characteristics of growth stocks," pointed out Mr Philip Tose, chairman of Pere-

EIB finds firm retail demand for \$200m of four-year paper

With the market occupied by the outcome of today's US FOMC meeting, there were only a few small-sized new eurobond issues yesterday, aimed mainly at retail inves-

Attention this week is likely to be focused on the Republic of Italy's Y400bn three-tranche offering of bonds, of three, 10and 20-year maturities, expected to be launched mid-week. In the dollar sector, the European Investment Bank launched a \$200m offering of four-year paper priced to yield

Syndicate managers said that the offering was expensive compared with existing fouryear paper, such as the EIB July 1998 which is currently trading in the secondary mar-

seven basis points over US gov-

over the yield curve. However, lead manager ABN Amro reported firm demand from retail investors in Switzerland and the Benelux coun-

tries. The proceeds were swapped into floating-rate pesetas, market sources said.

INTERNATIONAL

BONDS

In the yen sector, INI Finance launched a Y30bn issuer of five-year bonds targeted mainly at Japanese institutional investors. The bonds offered a spread of 29 basis

points over Japanese government bonds. After completing a series of roadshows in Asia, Germany's Bayerische Landesbank is poised to launch either a dragon bond or eurobond, Leh-

ket at around 17 basis points man Brothers said. Lehman deal of up to \$500m, although the exact terms will depend on market conditions following the FOMC meeting, syndicate

> The Australian and Canadian dollar sectors saw continued activity yesterday.

New South Wales Treasury

Corporation launched a A\$100m offering of three-year bonds, which were sold mainly to Japanese retail investors, lead manager Nomura said. Nomura said it was promoting Australian dollar debt to Japanese investors. The coupon of 4.5 per cent offered particularly good value compared with three-year Japanese bank

deposits, which currently offer

2 per cent, it said. Rabobank Nederland launched a C\$125m offering of six-year bonds priced to yield

EVC offering priced

By Martin Brice

The global offering of stock in EVC, Europe's leading manu-facturer of polyvinyl chloride, has been priced at F177 per share, valuing the whole company at Fl 1.13bn (\$650m).

The price is at the higher end of the F170 to F180 range indicated during the offering, which includes a retail tranche that starts today in the Netherlands and closes at 3pm on Thursday. Allocations will be announced on Friday and settlement date is November 28. Shares in EVC, a Dutchbased joint venture owned by

ICI of the UK and Enichem of

8.57 8.53 8.59

Nov 14 Nov 11 Yr. ago

4.12 3.88

Italy, will be listed on the Amsterdam Stock Exchange and trading will start on November 21.

A spokesman for S.G. Warburg, the UK merchant bank and joint global co-ordinator for the offering, said: "We are very pleased with the way it has gone. There was a tremendous response to the company.

The offering was notable in that Greenpeace, the international environmental group, criticised research on EVC, suggesting that it overvalued the company and failed to warn potential investors of environmental risks.

LONEMBER 13 M

Shock horror.

Tree. exactly as they were brought out of China, are three objects which have inflicted more pain and terror than you can ever imagine.

They are electric batons, smuggled out of the Chinese prison, where they were being used to torture prisoners.

The dirt on them is real

The man who brought them out took a terrible risk. He was desperate to show the world what is happening in China's prisons.

The baton on the left is shaped for easy insertion into the body. When the black button is thumbed, the

three metal bands around the shaft become alive with electricity. The chunky object looks like a curling tong,

but when it touches you, there's a crackle of blue flame and a shock powerful enough to burn skin and damage internal organs.

It was made in the Jing Jiang Radio No. 4 Factory, in Jiangsu, one of many such works in China mass-producing electric truncheous, cattle prods and other items. which they then proudly advertise in glossy brochures.

In Chengdu city, for instance, the Mensuo factory specialises in ironware: shackles, chains, handcuffs, thumb-cuffs and leg-irons.

Some of these gruesome objects are immensely heavy, others are ingeniously designed to cause the maximum pain.

This torturer's toolkit is used daily in China's prisons to punish those who have called for the democratic freedoms we often take for granted.

The torture of Liu Gang.

Liu Gang is a Physics graduate student from Beijing who took part in the 1989 pro-democracy demonstrations in Tiananmen Square.

One of the 21 'Most Wanted' students in China, he was jailed in 1989 and later sentenced to six years imprisonment for 'counter-revolutionary' crimes.

Liu is what Amnesty calls a 'prisoner of

conscience', that is, someone locked up in prison for expressing his non-violent political views.

Not just imprisoned. In a letter smuggled out of China last year, Liu claims that he has been repeatedly tortured. The Chinese Government denies this, but no impartial

investigation has ever taken place.

Its denial might carry more weight if the vicious torrures Liu Gang and other prisoners describe were in the slightest bit unusual, but, sadly, they are not.

A catalogue of horrors.

We now begin a catalogue of horrors that some people will find upsetting.

Please read it carefully. The information has come directly from prisoners who want the world to know what they are suffering. Often they have taken great risks to get the

Liu Gang was one of 11 political prisoners held at Lingyuan No. 2 Labour-Reform Detachment in Liaoning province.

Their ordeal began when they angered the authorities by refusing to admit they were 'criminals'. Six were taken away to be tortured.

When the electric baton being used on Tang Yuanjuan ran out of power, the guard began kicking him with tough leather boots and broke two of his ribs.

Leng Wanbao remained silent when questioned, so they forced open his mouth and stuck the electric truncheon in. Kong Xianfeng was attacked in a special

way. The guards applied their electric batons simultaneously to different parts of his body and he started bleeding behind the ears.

When Litt Gang's turn came, they applied the electric batons to his genitals. He was put in leg-irons weighing about

20 pounds - he wore these for several weeks. Liu was also forced to sit without moving on a bench for as long as 12 hours a day. leaving his body in agony.

50,000 volts through a naked man.

On the second anniversary of the 1989 massacre in Beijing, a prisoner called Li Jie staged a one-day hunger strike in memory of those who had died in Tiananmen Square and elsewhere calling for democracy - many of them mown down by machine guns, some crushed by tanks.

He was stripped naked and dragged onto a stage where the prison's Brigade Commander shouted and blustered at him before applying a huge 50,000 volt electric baton to his inner thighs.

Two other guards gave him high voltage shocks to his head, neck, shoulders, armpits, chest, stomach and fingers.

Li Jie went into spasms and passed out.

'Su Qin carries a sword on his back.'

To complement their skill with electric batons, many Chinese prison guards are

They have invented several tortures with fancy names like: 'Bending three wheels'. 'A string of bells', and 'Su Qin carries a sword on his back."

In 'Su Qin', one arm is bent back over the shoulder, while the other is twisted behind the back.

The hands are pulled together and the wrists tightly shackled.

A prisoner manacled in this manner can be hoisted by his wrists and left hanging for

hours, till he loses all feeling in his arms. 'Chain-shackling' is the science of cuff-

ing a prisoner's hands and feet together. One especially cruel method is as follows: find the smallest handcuff that fits the prisoner's wrist, then cram both wrist and ankle into it, using pliers and hammers to

snap the cuff shut. The pain of this torture is indescribable. The prisoner reportedly screams all the time he or she remains shackled, until

silenced by hoarseness. Screaming, of course, can make matters worse, if it irritates the guards.

At Mian County Detention centre, in 1990, one young prisoner was left shackled this way for several days.

Meanwhile others beat him.

Laba Dunzhu died of a ruptured spleen.

She woke

to find herself dying.

In Seitru Detention Centre, also in

Lhasa, 26 year old Sonam Dolkar was being

questioned after having been arrested on

suspicion of being a Tibetan independence

Tiring of her answers, her captors

Sonam convulsed and passed out. When

Often she was beaten with electric batons.

Once, Sonam awoke to find that her body

was covered in bruises and that two ribs

were broken. They had hit her as she lay

Like Liu Gang, she was kept in leg-irons

Eventually. Sonam was vomiting and uri-

We only know of her suffering because

when she was moved to a police hospital, she

for months. The torturers applied electric

batons to her face and every part of her

body, including inside her vagina.

managed to escape and flee to India.

she regained consciousness, she was lying in

the same room. Her skin had turned blue.

stripped her naked, wrapped electric wire

around her and plugged it into the mains.

sympathiser.

unconscious.

nating blood daily.

He screamed and wailed all day, and all night, so loudly and pitifully that no-one could get any sleep.

The shackles finally came off to reveal. apparently, rings around his wrists and ankles of red, rotting flesh.

"The old ox ploughing the land.'

In the same jail, Xie Baoquan and another prisoner were to be punished for fighting.

They were handcuffed back to back and a rope was tied around them. A group of prisoners was made to run with the rope. pulling them along.

One of the pair was able to crawl forward as fast as he could. Xie Baoquan was pulled along on his back over the rough concrete.

This activity, picturesquely called 'The old ox ploughing the land' continued until the concrete was covered with Xie's blood and his back was one massive wound from which the skin and flesh had been scraped.

He was put back into his cell without any medical treatment, his back left to suppurate. Xie's cellmates covered his back with a

cotton blanket which became soaked with pus from the wounds, and which filled the room with the stink of rotting flesh.

Forced to eat soap from a toilet.

Some prisoners were playing chess with pieces carved out of soap.

Spotted by a guard, they quickly threw the soap chessmen into their toilet bucket. The guard forced them to fish out every piece and eat it. In Gutsa Detention Centre, Lhasa, Laba Dunzhu, a young Tibetan who had taken part in a pro-independence protest was taken out into the prison yard and made to kneel.

A guard placed a boot on his neck and forced his face down into the filthy water of the lattine.

If you're as upset by these things as we

something to help.

You can do

are - and we're sure you must be - there is something simple and effective you can do right here and now to help. Join Amnesty.

Even in China, our voice is heard. The stronger we are - and the more pressure we can bring to bear on the Chinese Government . the more likely it is that the torture will stop.

The more powerfully we tell the world of the horror in China's prisons, the more difficult it becomes for governments in the free world to turn a blind eye to the prisoners' plight. This does work.

From other countries all over the world, we receive scores of letters every year from prisoners and ex-prisoners who have been helped by our campaigning. These include people who had been living in daily fear of torture or death.

For them, Amnesty's intervention has brought renewed hope and relief from pain. Liu Gang is still in prison.

Years of torture had left him suffering from a prolapsed anus, haemorrhoids, psoriasis and heart and stomach trouble.

Although only 32 years old, his hair had started falling out.

Until just over a year ago, he had had no medical treatment and had been allowed only five baths in two years. But since summer 1993, international

pressure appears to have improved his situation. His family have once again been permitted to visit him and they report that he

seems to be in better health. Earlier this year, foreign journalists were allowed to visit the prison where he is being held, but weren't permitted to talk to him.

A letter to each of us from Liu Gang.

Last year, Liu Gang managed to smuggle a letter out of prison. Here is an extract:

"Handcuffs and shackles won't frighten me. Electric batons won't silence me. Forcefeeding and brain-washing won't affect me. Forced labour won't change me. Solitary confinement and torture won't ever terrify me. Regardless of what is done to me, I shall continue to use all peaceful and non-violent means at my disposal to fight against tyranny and abuse."

Liu faced his ordeal with such courage that his fellow prisoners called him 'The Iron Man'.

He and others have taken incredible risks to tell the world about their suffering.

Surely it's impossible that people who enjoy the very freedoms which they are denied, could learn about their suffering and do nothing to help.

We're not trying to point a finger at you - this means all of us.

Liu's letter to us all ends with these words: "I have no option but to fight with all my body and soul. Please don't let me

Size the important ingredient

David Wighton on Johnson Matthey and Cookson's merger moves

In his last annual report, Johnson Matthey Mr David Davies, Johnson Matthey chairman, put it quite plainly: "Size is an important ingredient for a company with our ambitions. We aim to become a constituent member of the FT-SE 100."

Yesterday, the City was wondering whether sheer size was the main ingredient in its possible merger with Cookson. Such a move would push the

combined group well into the top 100 UK companies with a market value of about £2.5bn and annual sales of £3.5bn. But analysts believe that,

size apart, the rewards from putting the two together would be fairly modest. "Size brings some benefits in

its own right but the merger is driven more by the ambitions of the managements than anything else," said one leading analyst. Such sceptical views were

encouraged by the companies' decision not to elaborate publicly on the merger talks, news of which leaked out over the weekend. But the general reaction was

mildly positive, with Johnson Matthey shares ending 10p higher at 581p while Cookson edged up 1p to 252p. The concrete benefits ana

lysts could point to were the potential cost savings. Both companies have large London head offices costing some £10m a year, and also have some overlap in operations and research. Eliminating the duplication could

generate savings of more than

COMPANY ANNOUNCEMENT:

Further to this company's announcement which appeared in the press on 30 September 1994, the board

of directors of Northam Platinum Limited has decided, after consideration of a comprehensive technical

assessment, to refinance the company. Where necessary, the conclusions of the technical assessment have

The technical assessment has concluded that a production rate of 150 000 tons per month to the concentrator is not achievable in the near term. A revised initial target of 27 000 square metres per

month, equivalent to approximately 110 000 tons per month to the concentrator, has been established.

The actainment of the revised initial targeted metal production, productivity and operating cost

performance levels should result in a break-even cash flow position. An equity injection of up to

R500 million is considered necessary to revire outstanding debt and to see the company to the self-

The plan is not without its risks but the conclusions of the technical assessment, taken together with the

company's substantial platinum metals resource, have motivated the board's decision to proceed with a

refinancing of the company. Concurrent with the above programme, all alternatives for expanding the

Discussions are taking place with the company's advisers in regard to appropriate financing

overlap but most have been addressed already with the joint venture in ceramic colours and the sale of Johnson Matthey's jewellery materials

PRE-TAX TOTAL £119.0m

-£16.8m

Elsewhere, the groups have little in common: Johnson Matthey is the world's biggest manufacturer of automotive catalytic converters and the leading marketer of platinum group metals: Cookson is Europe's largest maker of plastic flower pots and a world leader in dental floss.

Johnson Matthey prides itself on its high level of research and development spending, more than one third of pre-tax profits last year, and sees itself very much as a high technology company. In con-

trast, while Cookson has sold off most of its assorted engineering businesses much of the group remains fairly mundane.

"If you go round Cookson's onerations you realise that it is not as high tech as you might think from looking at the pictures in the annual report." commented one analyst.

One speculation yesterday was that the combined group might be able to contemplate larger disposals of unpromising businesses. The companies themselves are likely to argue that it will allow them to take on biggest acquisitions. Even if the two companies

shareholders buy the arguments in general there is still the ticklish question of valuation. If shares in the new combined group were to be allocated in line with the companies' respective reported profits Cookson investors would get about 57 per cent. However, it is thought that Johnson Matthey will fight for more than 43 per cent, partly on the grounds that it has more conservative accounting policies. Analysts estimate that if it were to switch to Cookson's policies on depreciation and pensions its profits would

be some £7m higher. Johnson Matthey supporters also argue that it has better longer term growth prospects though this is disputed by Cookson followers who point out that Cookson's profits are currently growing faster.

Mr Davies and Mr Dick Oster, Cookson's American

SBC, said the bank expected a significant move towards limited liability corporate investment at Lloyd's. "You have to take a strong view, one way or

the other, about Lloyd's, and we have taken a positive one." To boost the attractiveness of MLIT, a warrant entitling shareholders to subscribe for one ordinary share at 100p will be issued with every five ordinary shares.

The latest date for acceptance is November 23 and dealings in the ordinary shares and warrants are expected to start on November 29.

Boots sells drugs side to concentrate on retailing

By Daniel Green

When John Boot started selling herbal remedies in Nottingham in 1849, he could not have imagined how awkward it would be for his successors to mind the shop and to discover new medicines.

Yesterday, the management of The Boots Company, one of the largest employers in the east Midlands, opted to concentrate on retailing. The decision was no sur-

prise. Boots has been criticised for being too small to compete in the drugs industry. Barely in the world's top 40 drug makers by sales, it needed a breakthrough to stay on terms. It was not to be. In the sum-

mer of 1993 it was forced to abandon its most promising drug, Manoplax, a heart treatment, because of side effects.

of its pharmaceuticals was only one of the possibili-

The exercise followed a decade of acquisitions in the 1980s, culminating in the unhappy purchase of retailer Ward White in 1989 for £900m. The delay in finalising the drugs business sale was partly

because of the price Boots was asking - which put off such suitors as the UK drugs compa-nies Zeneca and Medeva - but also because of the company's historic commitment to the city of Nottingham where it is one of the biggest employers. But earlier this month, Boots

management said that job losses were inevitable. This cleared a path for a buyer keen to cut costs, and provided an opportunity for a management buy-out. In the end.

announced a strategic review BASF was able to offer more. The sale includes all of Boots operations. An outright sale, overseas prescription drugs operations. These range from insulin sales in India to its biggest product, Synthroid, a thyroid hormone, which is only sold in the US. Other products include Brufen and Froben for rheumatism and to combat

about Span

inflammation. Boots has not left the health business entirely. It still owns an over-the-counter businesses that includes throat pastilles and sticking plasters.

Ironically, the sale of the drugs division will dilute earnings. But Sir James Blyth, chief executive, earlier this month sweetened the pill for shareholders by suggesting that some of the sale proceeds might be returned to them.

He did not say whether this would take the form of a share buy-back or a special dividend.

Sea Containers shows modest growth to \$21.7m

Stega £6.7m flotation

Sea Containers. the Bermudabased leisure, ferry and container leasing group, reported pre-tax profits of \$21.7m (£13.2m) for the third quarter, marginally up from \$21m.

The result brings the figure for the nine months to September 30 to \$25.2m (\$35.5m). The group, which owns the Orient Express and Hoverspeed, was adversely affected

Wardle Storeys edges ahead after land sale

An exceptional profit on the sale of land helped Wardle Storeys, the plastic sheeting, military parachute and marine safety and survival equipment manufacturer, report a modest 2 per cent increase in full year

Pre-tax profits increased from £8.04m to £8.2m in the year to August 31 bolstered by a £1.49m profit on disposals, including the sale of 9 acres of land adjoining the group's site in Brantham, Suffolk.

The exceptional gain offset a decline in operating profits, which slipped to £5.27m (£5.84m) and a reduction in net interest income which fell to £1.45m (£2.21m). Turnover, including a £727,000 contribution from acquisitions, grew by 2 per cent to £79.6m.

Earnings per share increased by 10 per cent to 23.9p (21.7p)

Sketchley rises 11% and aims to rebuild image

Sketchley is poised to embark on a marketing campaign in an effort to rebuild its image and increase awareness of its brand

Mr John Jackson, only 11 days into his new job as chief executive, said that drycleaning was mostly generic, but that the Sketchley brand was an under-utilised asset and should denote market leadership in terms of professionalism and reliability.

Mr Tony Bloom, deputy chairman, acknowledged that tarnished the brand, but a marketing campaign, probably on radio and in the press, would start soon to address this and to increase awareness.

The announcement came as the dry-cleaning, photo-processing and textile services group reported pre-tax profits up 11 per cent from £3.61m to £4m in the 26 weeks to September 30.

Mr Jackson was appointed following the departure of Mr John Richardson, who with Mr Bloom steered Sketchley away from the financial brink. Mr Richardson left, because "the job is done".

Mr Bloom said both consumers and retailers remained cautious, given that the "macro scene is still patchy". On the consumers' side, dry-cleaning was "a grudge purchase". He added that the retail side was highly operationally geared. Three extra customers per day per shop and we'd have a really excellent business."

Group turnover slipped to £74.5m (£75.7m), including £1.49m (£24.1m) from acquisi-

Share price relative to the FT-SE-A All-Share Index

tions, as 60 lossmaking branches were closed, bringing the total to 750. So far there are 47 sites

which combine dry-cleaning and Supasnaps, the photo-processing business acquired in 1993 for £6.6m. The group expects to have 150 joint sites within 18 months, which will involve a move into the north of England where Supasnaps is already represented.

The retail division made profits of £2.79m (£2.44m) on turnover of £45.8m (£48.9m). Profits in textile services rose to £2.79m (£2.21m) on turnover of £28.2 (£25.3m). Warrender Aircraft Services, acquired in April for £8.4m including debt, contributed £400,000 to profits and £1.5m to turnover.

Over the half, borrowings rose from £11.3m to £15.5m after the Warrender buy, giving gearing of 42 per cent. This should revert to the 30-35 per cent level of the April 1 year end by the end of this year. Earnings per share emerged at 4.5p (4.4p) and the interim FT Mobile Communications is the definitive newsletter on the sector for the busy executive and analyst. Former chairman seeks break-up of controlling family trust

Dunnes battle comes to court

By John McManus in Dublin

A two year battle for control of Dunnes Stores, Ireland's largest retailer, moves to the High Court today when Mr Ben Dunne, the former chairman, will ask the court to break-up the family trust that has owned most of the company since the 1960s.

Mr Dunne lost the chairmanship of Dunne Holdings, the group company, in March last year after being out voted 3-2 by the other executive directors, who are also his brother and sisters. By August last year, he had been relieved of all executive responsibilities.

Dunnes has an annual turnover of 1£900m (£880m), employs 5,000 people and has about 22 per cent of the Irish retail market.

Following an unsuccessful attempt in August 1993 to get the other members of the family to buy him out, Mr Dunne instigated legal action. He is seeking to have the trust declared invalid, claiming it does not operate as a genuine discretionary trust and was designed to shield the assets of the business from the Irish revenue authorities.

Set up in the 1960s by the company's founder, Mr Ben Dunne Snr, the trust holds 99,000 non-voting ordinary shares. There are 1,000 voting preference shares held equally by Mr Dunne, his brother and two sisters, as well as the estate of one sister who died last year.

The ordinary shares are held in trust for the children of the five preference shareholders. If accountancy firm, Mr Edward in trust for the children of the

the trust is broken up. the ordinary shares are expected to pass to the preference shareholders on a pro-rata

Mr Dunne is claiming that a decision by the trustees to extend the trust after it was due to expire in 1985 was not valid as they did not have the power to do so. By extending the trust, a capital gains tax bill, estimated to have been

1540m, was avoided. Mr Dunne is also alleging that the trustees cannot carry out their functions properly because of an "invidious con-flict of interest" as some of them are also legal and financial advisers to the company.

The four trustees are Mr Noel Fox, a senior partner in

FINANCIAL RESULTS

The Board of Directors are pleased to announce the following

in Matheson Ormsby Prentice. the law firm, and Mr Frank Bowen and Mr Bernard Uniacke, two partners in the Irish practice of Deloitte &

Touche. If Mr Dunne is successful he will seek to buy-out his brother and sisters or sell his shares, valued at I£80m, to them.

In a separate action, due to start later this year or early next year, Mr Dunne will claim that he has been oppressed and ask the court to order his brother and sisters to sell their shares to him.

Alternatively, he wants to be returned to his previous position or have the court make his brother and sisters buy him out, Failing that, he wants the company wound-up and the

£38-1,000 (£260,000). Net interest charges of £1.03m (£600,000) left the pre-tax loss at £650,000 (£1.76m). Losses per share were 2.58p (10.41p). March's reconstruction included a placing which more than doubled the equity base;

> from £6.45m a year earlier. Since the period-end the group has sold its Parkway industrial estate at Trafford Park, Manchester, for 23.6m, 20 per cent above valuation in February. This had underpinned the outcome according to Mr David Gradel, chairman, and would allow the resumption of dividends, starting with the preference distribution scheduled for January 1.

M

Renold jumps to £4.6m as orders increase 20%

By Richard Wolffe

name from Sheafbank Property Trust in March following Pre-tax profits at Renold a financial restructuring, almost doubled in the six reported reduced pre-tax losses months to October 1, when the for the year to June 30 and chain and gear manufacturer said that dividends, halted in experienced a 20 per cent rise 1992, were likely to be resumed in the new year. in orders.

The Manchester-based company yesterday announced pretax profits of £4.6m (£2.4m) on turnover up 8 per cent to £70.9m (£65.4m), despite lower sales in the machine tools and rotors division. Operating margins improved

from 5 to 7 per cent. after a lengthy restructuring which has cut the workforce by 30 per cent to 2,600 in the last four

Profits were also lifted by lower redundancy costs of £300,000 (£500,000) and a reduction in interest costs

from £800,000 to £600,000. Mr David Cotterill, chief executive, said: "During the bad days, the company invested a hell of a lot in the factories. That new equipment is producing the goods now and generating a good cash

Profits improved at the chain operations, where the UK plants reported higher sales in both domestic and export markets. Chains account for 60 per cent of group turnover.

Demand recovered for the automotive timing chain produced in Calais, as US motor manufacturers aim to replace belts with longer-lasting chains to drive camshafts.

The gears division reported a 35 per cent increase in orders after attracting contracts for escalators in underground

transport systems, including

FINANCISI 133

London's Jubilee line. The machine tools division is expected to improve sales in the second half, including orders from the air conditioning and food distribution industries in Japan and Russia.

Mr Cotterill said the company would seek to acquire bolt-on businesses to complement its present activities. It was also planning to lift capi-tal expenditure from its pres-

ent 22.5m. Gearing fell from 19 to 2 per cent at the half-year stage as net borrowings decreased to £1.4m (£10.1m).

Earnings per share rose to 5.5p (2.9p) and the interim dividend is lifted from 0.7p to 1.2p.
The shares closed up 4%p to

Kalamazoo returns to the acquisition trail

By Paul Cheeseright, Midlands Correspondent

Kalamazoo, the Birmingham-based computer services and printed systems group, has made its second acquisition of the financial year with the purchase of WIS Computer Systems for up to £5.79m in

cash and shares. There is more to come. We've been quite busy. There are a number of discus-

N

TENAGA

N

NASIONAL BERHAD

sions in the pipeline," said Mr Mike Langmore, chief executive. In August, Kalama-zoo said it expected to spend up to £20m this year on expanding its computer services business.

The initial payment for WIS, a privately owned Cardiff company, is £1.52m in cash and £270,644 in new Kalamazoo shares. A further consideration of up to £4m in cash and shares depends on the net results of WIS in the years to January 1998.

The effect of the share issue, combined with the shares issued under employee share option schemes announced in January, will be to dilute the holding of Kalamazoo Trust to less than 50 per cent for the first time since it was set up in 1948.

Earlier this year the trust, established to ensure that employees had majority ownership, agreed to accept dilution, thus giving the board the choice of using Kalamazoo paper to make acquisitions.

Earnings per share is calculated by dividing the profit after taxation and minority interests by the weighted average number of

shares in issue during the year of 3,021.8 million (1993: 3,000.2 million).

Net tangible assets backing per share is calculated by dividing the total net assets by the weighted overage number of shares in issue during the year of 3,021.8 million (1993: 3,000.2 million).

The authorised ordinary share capital is RM 3,500,000,000.

During the year the Company's issued and paid-up ordinary share capital was increased from RM 3,001,827,000 to RM 3,034,622,000 by the issue of 32,795,000 ordinary shares of RM 1 00 each at an issue price of RM 8.34 per ordinary share pursuant to the exercise of options under the Company's Employee Share Option Schame.

In the opinion of the Directors, there are no items, transactions or events of a material and unusual nature which have arisen subsequent to the financial year end which would have substantially affected the results of the operation of the Group or of the

REVIEW OF RESULTS

The profit after tax of RM 1,723.9 million represents a 13% return on Capital Employed. As compared with previous year, profit after tax has improved by 13% mainly due to increase sales of electricity to the industrial sector, withdrawal of discounts during the year and the realised foreign exchange gain from loan prepayment. The Directors are of the opinion that profits for the year are satisfactory given the capital employed and the Company's need to finance its significant capital development programme. PROPOSED DIVIDEND

A final gross dividend of 7.0 sen per share [1993: 7.0 sen] has been recommended by the Board of Directors subject to shareholders' approval and is proposed to be paid on 20 january, 1995 to shareholders on the Company's register at the close of business on 30 December, 1994. Together with the interim gross dividend of 5.0 sen per share { 1993; 5.0 sen} poid on 8 July, 1994 the total gross dividend for the year is 12.0 sen} 1993: 12.0 sen). Registrable transfers received by the company up to 5.00 pm on 30 December, 1994 will be deemed registered in determining the entitlement to the said dividend. Accordingly the Share Transfer Books and the Register of Members will be closed from 31 December, 1994 to 6 January, 1995 (both dates inclusive) for the purpose of determining shareholders' entitlement to the dividend. ANNUAL GENERAL MEETING

The Annual General Meeting of the Company will be held on 29 December, 1994.

PROSPECTS FOR THE CURRENT FINANCIAL YEAR 94/95

The Directors are of the opinion that with the country's economic growth and in the absence of unforeseen circumstances the Group will maintain its turnover and profit during the current financial year.

ATACHER (1984)

in contract

Pilot net associati

A much bigger than expected turnround at associated companies, combined with more than trebled trading profits from its own business. helped British Steel to announce its best interim results since the 1990-91

Pre-tax profits for the six months to October 1 rose from £27m to £159m, on turnover ahead from £1.97bn to

Earnings per share jumped from 1p to 6.49p and the interim dividend is raised from

In its trading statement, the company highlighted the "major improvement" in the results from its main associated undertakings.

These include Avesta Sheffield, the Anglo-Swedish stainless steel producer, and UES Holdings, the UK engineering steels and forgings concern.

Analysts had been pencilling

in a contribution of about £20m from associates, against a loss of £8m in the previous first half. In the event, they contributed £41m, a performance which reflected rationalisation and cost reductions.

Avesta Sheffield, in particular, was spurred by increased Share price relative to the FT-SE-A All-Share Index

1993

demand and selling prices. It now appeared well posi-tioned to benefit from the current improved trading condi-

tions, the company said. In September, British Steel paid £85m to increase its stake in the company from 40 per cent to 49.9 per cent. It had previously spent £20m taking up its share of an Avesta rights

The recovery at Rotherhambased UES, in which British Steel has a 60.9 per cent stake, was less marked. It lost £48.1m before tax in 1993, but has since been trading profitably.

GKN, which owns the other 39.1 per cent, has made it clear

Siebe buys US group for \$90m

Siebe, the international Mr Brian Moffat, British controls group, has agreed to Steel's chairman and chief pay \$90m (£54.8m) for Triconex, executive, said his company a US company which makes was a long-term investor in critical process safety shutdown systems for the UES. He added, however, that the company was still "not as chemicals, oil and gas efficient as we would like it to

industries.
The UK-based group will make a tender offer worth ing position, Mr Moffat said \$17.75 a share; the deal has been recommended by improvement in UK demand in the latter part of its the board and senior manage ment of California-based Triconex, which is quoted on

Nasdaq. Triconex pioneered triple modular redundant (TMR) technology for the process industry.

Siebe said this provided a similar level of safety to that available to the aerospace industry, at an extremely competitive cost. TMR architecture utilises three parallel components

failure of any single component will not cause an interruption in control. Siebe said Triconex was not only the recognised leader for such safety systems, but had also been instrumental in mak-

throughout the system, so the

ing this technology the industry standard. Triconex, founded in 1983, has achieved rapid sales growth, particularly during the past five years. In the year to September 30, it made net income of \$5.2m on sales of \$48.8m. It has net assets of \$36m.

Its equipment has been used for many years by Foxboro, Siebe's Massachusetts-based subsidiary, which has been gaining market share with its Intelligent-Automation process control systems.

Siebe said safety shutdown systems were the fastest growing part of the process control industry.

Although it was paying a high multiple of earnings for the US company, Triconex was already achieving Siebe-style margins and was being bought for its potential.

Melville delisted

Melville Group yesterday had its listing cancelled at the exhibition services and interior fit-

tings group's request.
In August, Melville announced that it had requested Barclays, as agent for a banking syndicate, to appoint receivers.

Melville shares were suspended in May when it said that it was in talks which could lead to the sale of a substantial part of the business.

An amendment to the forearly next year.

HE

There he is. Fourth row, second from the left. The one with the moustache. Obvious really.

Maybe not. The unsavoury-looking character you're looking at is more likely to be your average neighbourhood slob with a grubby vest and a

weekend's stubble on his chin. And the real refugee could just as easily be the clean-cut fellow on his left.

You see, refugees are just like you and me.

Except for one thing.

Everything they once had has been left behind. Home, family, possessions, all gone. They have nothing.

And nothing is all they'll ever have unless we all extend a helping hand.

We know you can't give them back the things that others have taken away.

United Nations High Commissioner for Refugees

We're not even asking for money (though every cent certainly helps).

But we are asking that you keep an open mind. And a smile of welcome.

It may not seem much. But to a refugee it can mean everything.

UNHCR is a strictly humanitarian organization funded only by voluntary contributions. Currently it is responsible for more than 19 million refugees around the world.

LCE cocoa study clears funds of distortion |UN seabed agency prepares

By Deborah Hargreaves

The hedge fund and institutional money that has poured into the commodity markets this year has not made futures contracts more volatile nor pushed prices out of line with physical supply signals, as is believed by many traders, according to a report to be released this week.

The report, by Christopher Gilbert, professor of applied econometrics at Queen Mary and Westfield College, part of the University of London, was commissioned by the London Commodity Exchange and is the first to examine the activities of futures funds in the London market. It charts fund activity in the world cocoa

Prof Gilbert notes that many institutional investors have

since the beginning of the year as a way of diversifying their portfolios. At the same time, short-term trend-following funds with fairly large amounts of money to trade have been increasingly active in commodities.

It is these short-term traders who base their decisions on technical trends that many dealers blame for exaggerating price trends and increasing volatility in the commodity markets. However, Prof Gilbert shows that intra-day volatility in cocoa has changed little in the past five years.

In addition, he believes that there are enough dealers basing their decisions on fundamental analysis of the market to counteract the effects of technical trading. "This suggests that technical trading is unlikely to have any sustained

does exaggerate short-term price movements," he notes.

Fund activity does have the beneficial effect of dramatically improving liquidity in agricultural futures markets. where thinness has been a particular problem. This addition of depth offsets the exaggerated price movements generbert says "these two effects appear in general to cancel".

He also refutes the suggestion that funds have pushed prices away from physical supply signals, concluding that, on the contrary, in cocoa they have brought the two closer

Institutional fund investors looking to play the long-term trends in commodity markets have provided much of the growth in liquidity in the cocoa market, particularly in

preclude the possibility that it New York, during the past eight years.

Since last July, funds have also become large holders of cocoa stocks. From an analysis of US regulatory figures, Prof Gilbert concludes that these funds hold between 300,000 and 600,000 tonnes of cocoa in the London and New York mar-

These holdings account for between 25 per cent and 50 per cent of the entire stocks held by the industry.

"The commodity funds have essentially bid it away from the grinders. They are willing to pay a higher price to control the stock. This reflects their concerns about inflation, their view that cocoa and other commodities (but not coffee) remain cheap and the poor performance of other investments," the report states.

purchase of cocoa stocks by the funds has coincided with the general run-up in price experienced by the market. He says funds are not necessarily pushing the cocoa price out of line with market fundamentals, but that cocoa appears to have been under-valued in

The report suggests that the large fund purchases in July 1993 may have been the catalyst that triggered a return to prices more in line with costs. This points to the fact that "fund activity has affected the level of cocoa prices, but in a direction which aligns them more closely with market fun-

damentals". Commodity Fund Activity and the World Cocoa Market: by Professor Christopher Gilbert. Available from the London Commodity Exchange from

Prof Gilbert says that the Pension portfolios seen opening up to commodities

Many large pension funds are close to including commodities in their investment portfolios as a way of diversifying away from traditional financial holdings, according to Mr Steven Strongin, vice president and commodities strategist at Goldman Sachs, the US investment

"We are now in a buil market and some investors are taking their first steps into commodities, but it will probably not be until the next production cycle when complace in many portfolios," he als with oil coming later and soft commodities last," Mr

The perception among many investors is that commodity markets are reaching the peak of their price upturn. But Mr Strongin pointed out that although some metals and coffee had swung sharply upwards, many other commodities were yet to be affected. The Goldman Sachs Commodity Index, which tracks movements of 22 commodities, is up 4 per cent so far this year.

There is a certain pattern to price movements in each business cycle: gold leads the way followed by the industrial met-

Strongin said. So far, the current price run has adhered to previous patterns.

Oil has been left behind as other commodity markets have taken a roller-coaster ride this year, but Mr Neil Bresolin, commodities analyst at Goldman, believes that lack of investment in production, coupled with increased demand, will be enough to push prices up next year. "Oil and coffee are the most volatile markets so you won't see oil going up in a straight line, but

ratchet up next year," he said. those markets," said Mr Stron-Global growth will give a boost to all commodity markets. Mr Strongin points out that strong growth in Asia and

tion in those economies is more commodity-intensive. "The specific timing of price moves in different sectors depends on the build-up of canacity in previous cycles: there will be an increase in soft commodities fueled by demand from developing countries. But the bumper US har-

vest has temporarily dampened

Latin America is more closely

linked to rising demand for

basic commodities as produc-

Some strong price movements in metals and coffee this year have been blamed on speculative action by hedge funds ignoring market funda-mentals, But Mr Strongin believes speculation in commodities cannot be sustained for long periods because of the

discipline imposed on the mar-kets by physical realities. "The spot markets make commodities unique because they are based on real physical demand for raw materials. Anticipatory moves in price are difficult to sustain."

for its inaugural meeting

A new United Nations agency to monitor the recovery of minerals from the international seabed is to be launched in Jamaica tomorrow with the inaugural meeting of the International Seabed Authority.

UN officials say that all the operations of Unisa will be on commercial basis, and that the intention is to find an orderly method of dealing with minerals located on the international seabed, preventing "chaos and anarchy" in the world's metals markets.

The authority will be responsible for implementing the Law of the Sea Convention, a broad agreement on seabed mining that was reached after 11 years of contentious negotiations between industrialised and

developing nations. The new agency's work will

focus on the exploitation of bil-

metallic nodules lying on the international seabed, which have been declared the "common heritage of mankind", by the UN. The nodules contain mainly copper, nickel, manganese and cobalt, with smaller

quantities of other minerals. When the negotiations started under the auspices of the UN, it was expected that commercial exploitation of seabed minerals would have started by 1998. UN officials now say that seabed mining will not begin until about 2008.

The Law of the Sea Convention also creates Enterprise, the authority's commercial arm, which will oversee exploration and mining through joint ventures among private companies and states, and Tribunal, which will adjudicate disputes over seabed mining among states and companies.

By Canute James in Kingston lions of dollars worth of poly- will be located in Jamaica, while Tribunal will be based in Hamburg.

Harveter lister

ate buy

The negotiations on the convention were drawn out because of concerns among industrialised states that developing country governments would have too much an influence on the authority and effectively control seabed mining For their part, developing countries feared that international consortia with significant technological and financial resources would dominate seabed mining, depriving poorer countries of the bene-

administer makes provision for the protection of land-based producers of minerals found on the international market. Land-based producers were worried that unregulated seabed mining could flood markets and depress prices. -

Stora raises pulp charges still further

The authority and Enterprise

By Christopher Brown-Humes in Stockholm

Stora, Europe's leading pulp and paper group, said yesterday it planned to increase longfibre pulp prices by a further \$50 a toppe from January 1. the sixth price rise in a year.

The increase, which will lift the price of northern bleached softwood kraft pulp to \$750 a tonne, means pulp prices will have nearly doubled from their \$390 at the end of last year.

exceptionally low levels has been driven by wood shortages, rising demand, and inventory build-ups.

A number of North American and European pulp producers have recently announced price rises as part of a general industry drive to take advantage of rising demand and economic recovery. The weaker dollar helped to trigger the lat-

est increase.

The rebound from 1993's of Stora Cell, the group's pulp unit, said he expected pulp prices to continue rising next year, although at a slower

> "We think that the price will climb to \$840 to \$850 per tonne by the end of next year," he stated. Prices peaked during the last cycle at \$840 a tonne in

Stora is also increasing the price of bleached short-fibre birch and eucalyptus pulp by Mr Lennart Holm, president Ecu30 to Ecu580 (2455) a tonne.

Amoco begins drilling for Silesian coal bed methane

there is potential for it to

By Christopher Bobinski

Amoco, the US oil and gas company, has begun exploratory drilling for coal bed methane gas in Poland's Silesian region, where reserves are estimated at between 400bn and 600bn cubic metres.

Success would enable Poland

COMMODITIES PRICES

to cut its dependence on Russian natural gas imports and boost the share of gas in overall energy consumption from a present low of 8 per cent.

Amoco won its concession on a 500 sq km plot in the summer of last year but delayed drilling until Poland agreed in August to extend tax breaks allowing the company to recoup initial

LONDON STOCK EXCHANGE

MARKET REPORT

Late buying surge sees Footsie approach 3,100

Strong support for the dollar and international bonds ahead of today's crucial decision on the course of US interest rates encouraged London's equity market to launch another attack on the 3,100 mark on the FT-SE 100 Index.

The late flurry of buying across most international markets produced a surge of support for the Footsie future and drove the cash market to the day's best level at the close. The FT-SE 100 settled 19.4 higher at 3,095.3. And dealers were hopeful of another good showing by UK equities when the market opens this morning.

Some dealers harboured suspicions that activity in specialist derivative products, involving specially tailored options, could have

played a significant part in the late drive by leading stocks. Activity in these deals has played an increasingly large part in the London market in the past 12 months.

Aiding the much improved mood in the market was news of a possible merger involving two big UK companies, Johnson Matthey and Cookson, which could produce a £2.5bn new entrant for the FT-SE 100 Index, and more highly encouraging news on the dividend front from the leading UK companies as British Steel pleased the market with a top of the range interim

One of the few minor disappointments for the market was the level of turnover which, at 492.4m shares, continued the recent run of dismally low volumes. Last Friday saw the value of customer business just

manage to creep above the £1bn mark.

Turnover in non-FT-SE 100 stocks accounted for 302m shares, more than 61 per cent of the day's total. Second line stocks failed to register any significant gains, however, with the FT-SE Mid 250 Index ending just 1.6 firmer at 3,538.1.

Big gains in the leaders at the close were a reversal of the early trend in the market, when prices slipped away on very low volume as dealers became increasingly nervous ahead of today's FOMC meeting at which the Federal Reserve is expected to hoist its Fed Funds rate

for the sixth time this year.

A 50 basis-point rise is viewed as the very minimum the markets would take as acceptable if the Fed is to be seen as maintaining a responsible attitude to containing

US inflationary trends. Many analysts would prefer a rise of 75 basis points and many would like to see rates increased by a full point.

The first of a big batch of eco-nomic numbers from both sides of the Atlantic. UK producer prices, were broadly as expected and played little part in determining events in the market. Along with the outcome of the FOMC meeting today brings US retail sales numbers, industrial production details and capacity utilisation figures.

day, the FT-SE 100 was down 6.4 and being strangled by lack of interest. Sentiment began to improve over lunchtime, however, with the stronger dollar and a firm opening

At its worst, shortly before mid-

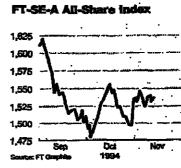

by Wall Street prompting keen mand across Europe. "The sellers dried up and the

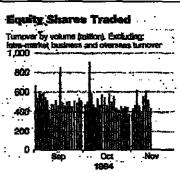

senior trader, who added that the market was in a bullish mood at the

There was heavy turnover in the banks, where switching out of Barclavs was said to have driven National Westminster and other leading clearers better. Lloyds were lifted by a recommendation from Kleinwort Benson. Vodafone took the accolade as the

FT-SE 100's best individual performer, responding to increasing optimism over next week's interim

The English power generators moved ahead confidently, with the market looking for the companies to fulfil high expectations for their respective interim dividends. Payents in excess of 20 per cent are being sought by the sector's bulls.

in principle to sell its pharmaceuticals division to BASF, the German chemicals and drugs group, for £850m.

The company was generally thought to have negotiated a good price for the sale, although more optimistic ar. 1lysts were left slightly disappointed, having anticipated a sale price £50m higher.

The move ended months of speculation over what one analyst called "the world's worst kept secret". After an initial retreat, the shares closed at 513p ex-dividend as analysts turned their attention to how the group would use the proceeds of the sale. A share huvback operation was seen as the

most likely move. High street bank Lloyds jumped 13 to 580%p as dealers said Kleinwort Benson was poised to release a positive note on the clearer. HSBC rose 7 to 728p on a James Capel recommendation and Barclays was restrained by a repetition of UBS's long term caution.

Precious metals, car parts and materials technology group Johnson Matthey put on 10 at 581p as analysts reacted enthusiastically to a possible merger with metals and plastic business Cookson Group. The potential deal was described as an important strategic fit. Cookson firmed 1 to 252p.

British Aerospace gained 21/2 at 463%p following news of a potential \$1bn aircraft order. The group has won a \$420m order for 25 Jetstream 41s with an option on a further 35. Talk continued that Unigate

was planning to buy unlisted Dairy Crest, the UK's biggest cheese maker. Unigate shares although analysts warned that such a takeover could spark a Monopolies and Mergers Com-

mission investigation. Wm Morrison Supermarkets saw turnover of 7.5m as the shares hardened a penny to 140p. The day's trading in the stock included a line of around Im shares switched from J. Sainshury which closed at 419%p xd after trade of 3.2m. High street retailer W.H.

Smith closed 3 lower at 453p, with Nomura said to have reduced its current-year profits estimate by £5m to £140m due to difficulties in trading. Negative press reports on jewellery and luxury products group Asprey saw the shares surren-

der 11 to 146p. Chemicals group BOC improved 6 to 710p ahead of figures expected today.

However, much of the sector was restrained by concern over companies' inability to pass on the price of raw materials to customers following Wardle Storey's figures. British Vita retreated 7 to 222p.

Monument Oil & Gas received support from an in-depth analysis of the sector published by Smith New Court. The shares were firm at 69p.

MARKET REPORTERS: Peter John, Joel Kibazo Jeffrey Brown.

M Other statistics, Page 26

Chemicals leader ICI was one of the stronger performers among the FT-SE 100 constituents yesterday as the company's joint broker turned bullish and the market focused on the phenomenal rises in raw materials of which ICI is the main UK manufacturer. Also, investors picked up international

the majority of UK investment houses by moving to "buy" from "hold". Analyst Mr Paul on the rationale behind the move, but it was believed to have been prompted by the fall in the share price since thirdquarter figures in October that were accompanied by a sharply raised earnings forecast.

Their recent performance

from 3pm onwards but contract numbers stayed low. The FT-SE 100 December contract was 3,101 at the close of put trading, up 28 points. The premium to the cash market was around 13 points, with fair value some 6 edints.

A number of major houses, notably NatWest and GNI, were in action during the afternoon but contract numbers totalled just 8,545, little better than the 8.073 traded on Friday when large parts of the Continent were

In late, screen trading the December future moved ahead a few more points to 3.108 but again there was no real enthusiasm, with contract numbers for the day staying

under 10,000. Stock option activity was also little changed from Friday, with 31,163 contracts dealt, against 31,129. FT-SE and Euro FT-SE business accounted for 23,000 lots. Lonrho was again far and

CURRENCIES AND MONEY

MARKETS REPORT

Krona moves centre stage after Swedish EU vote

The Swedish krona was the main mover on the foreign of some selling pressure, the favour of joining the European Against the yen it finished at Union, writes Philip Gawith.

Although a "yes" vote had been largely discounted, the market still drove the krona to a high of SKr4.6530 against the D-Mark, from Friday's close of SKr4.75. Profit-taking then saw with the trade weigh the currency ease back to SKr4.712 at the London close.

Also in the news was the French franc, where a further political resignation helped drive the currency to an eleven month low. It closed at FFr3.44, from FFr3.439.

Overall activity was fairly subdued, however, with most market attention focused on the meeting today in the US of the policy-making Federal Open Markets Committee. There is an overwhelming consensus in favour of the Fed raising the federal funds rate by 50 basis points, to 5.25 per

EXCHANGE CROSS RATES

Y98.425 from Y97.5.

Some analysts fear, however. that this will not satisfy the market, leaving the dollar vul-Sterling had a quiet day. with the trade weighted index

After the initial bout of postreferendum euphoria, the market's attention returned to the underlying economic chal-lenges facing Sweden, causing a small correction.

closing at 80.2 from 80.3.

Mr Chris Turner, currency strategist at BZW, commented: The krona is probably not going to appreciate much more

With the D-Mark the victim from here, following the sharp run-up in the weeks ahead of exchanges yesterday after a dollar ended firmer at the vote. People realise that weekend referendum vote in DM1.5453, from DM1.528, joining the EU won't be the answer to many of their prob-

> lems. The key concern is whether the new government will succeed in putting its finances on a sounder footing. "They have to address the fiscal issue if they want to take part in monetary union," said Mr Adrian Cunningham, senior currency economist at UBS in London.

Although the prospect of EU membership is likely to serve as an inducement to tighten policy, the central bank's efforts to curb inflation could complicate this process. Mr Turner notes: "The central hank has shown itself happy to raise rates if sees inflation ahead, but that is not terribly consistent with trying to lessen the debt burden."

■ One of the catalysts for further French franc weakness was the weekend resignation

Against the DM (Skr per DM)

of the co-operation minister Mr Michel Roussin, the latest in a string of corruption related departures.
"Is there another Italian job

in the offing? That's what's bothering international investors," said Mr Peter Luxton. economist at MMS in London. Mr Roussin's departure follows comments last week from

wing candidate for the presi- the average cumulative dency next year, that unsettled increase in Fed funds, for any markets. He proposed a referendum on whether France since 1960, is 530 basis points would join a single currency arrangement, and also pledged

Mr Turner commented: "Once you get within six months of an election, as you are in France, politics becomes a much bigger issue for the

to strive for full employment.

■ Amid all the speculation about what the Fed may do today, a few facts are to hand. One concerns market expectations: the December and March eurodollar contracts on Liffe were trading at 93.97 and 93.46 yesterday, suggesting that the market is expecting rates to rise by around 125 basis points. from 4.75 per cent currently, by the end of the year, with a further 50 basis points tightening

in the first quarter of 1995. The other involves a bit of history. Citibank, in its latest Mr Jacques Chirac, a rightcurrency comments, notes that

POOLLAR SPOT FORWARD AGAINSTARF (OF PROJECT AT A COLUMN ACCOUNT OF THE PROPERTY OF THE PROPERT

period of monetary tightening over an average time scale of 20 months.

"This implies a potential Fed funds target of 10 per cent by the end of 1995," says Citibank. "However, the current cycle features relatively lower levels of inflation and our best guess is that the Fed funds rate will move to 8 per cent over that time period."

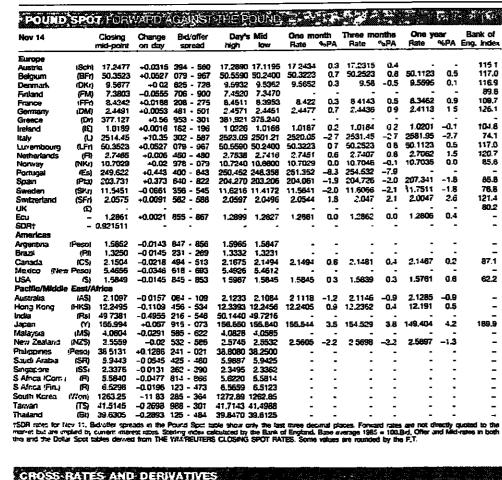

■ The Bank of England provided UK money markets with £1.176bn assistance, at established rates, after forecasting a £1.15bn shortage. Overnight money traded between 31/2 per cent and 5% per cent.

CONTRACTS & TENDERS

WELSH HEALTH COMMON SERVICES AUTHORITY PROCUREMENT SERVICES

As part of a review of its activities the Welsh Health Common Services Authority, acting on behalf of NHS Organisations in Wales, invites expressions of interest from suitably qualified and experienced organisations to participate, in whole or in part, in the provision of procurement services including purchasing, contracting, storage and distribution of goods, supporting computerised management and procurement services including purchasing, contracting, storage and distribution of goods, supporting computerised management and information systems and advisory services. Applicants are required to provide evidence of their track record in supplying services of this type and experience of complex high volume and high value supply chain management which should accompany their response to this advertisement.

Selected organisations will be provided with full details of the services Selected organisations will be provided with full details of the services involved and asked to make proposals to the Authority for their future delivery and overall management. The proposals will not themselves be treated as tenders for any particular service requirement. The evaluation of the proposals received will assist the Authority in establishing its tender programme and each specific contract for which offers are to be sought programme and each specific contract for which offers are to be sought will, if necessary, be the subject of appropriate notices in The Official Journal of the European Communities and put out to tender in accordance with the applicable regulations.

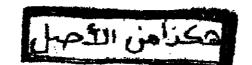

Expressions of interest should be made in writing for

Nigel Kirk, Chief Executive Welsh Health Common Services Authority Crickhowell House, Pierhead Street Capital Waterside, Cardiff CF1 5XT (Tel: 0222 500500 Fax: 0222 502502)

Dow bounces on rises in bonds, dollar

Wall Street

US share prices bounced back from Friday's losses yesterday morning, influenced by rising bond prices and a strengthen ing dollar, writes Lisa Bransten in New York.

By 1 pm, the Dow Jones Industrial Average was up 24.22 at 3.825.69, more than making up for Friday's 20.52 decline. The more broadly based Standard & Poor's 500 rose 2.73 to 465.08, while the American Stock Exchange composite gained 0.87 at 448.91. The Nasdaq composite was ahead 3.15 at 765.27. Trading volume on the NYSE came to 151m shares.

The market was strengthened in part by gains made by the dollar against the yen and the D-Mark. This boosted bond prices by allaying fears that a declining dollar would drive investors out of US government securities.

Volume was modest as investors awaited news on interest rate policy expected to come out of today's meeting of the Federal Reserve's Open Market Committee meeting. The consensus on Wall Street was that the Fed would boost the federal funds target rate by 50

basis points to 5½ per cent. Traders were also awaiting other economic indicators this week for hints of inflationary pressures. Expected today were figures on retail sales and industrial production, and tomorrow should see the release of all-important consumer price figures.

The biotech sector continued to make strong gains after reports that a major pharmeceutical company was negotiating to by a minority equity position in Chiron. After closing up \$11% on Friday, Chiron gained \$3 at \$741/2, towing along much of the rest of the sector: Genentech gained \$% at \$47%, Amgen \$1% at \$58%, Biogen \$% at \$40% and Cellpro \$% at \$15%.

Shares of Chrysler, which at noon were the most actively traded securities on the NYSE, jumped \$21/2 at \$481/2 amid a tussle between the company and Mr Kirk Kerkorian, its biggest shareholder. Mr Kerkorian said he wanted to increase his holdings in the carmaker and called on Chrysler to act to increase the value of the com-

Eastman Kodak rose \$1% at \$47 after an analyst at Prudential Securities upgraded the shares to "buy", citing the company's speedy move to return to its photographic roots by selling other assets.

Canada

pany's shares.

Toronto stocks were mixed at midday in extremely thin trading ahead of today's Federal Open Market Committee meeting. One trader said that any movement yesterday was likely to reflect position-squaring in advance of the expected rise in US interest rates. The TSE 300 index rose 8.4 to 4,179.1 in volume of 20.3m

Venezuela

Share prices on the Caracas Stock Exchange slipped for the 11th day in succession, the Merinvest index closing 2.36 or 1.9 per cent lower at 124.05.

Electricidad de Caracas, the market's benchmark stock, fell 12 bolivars more to 230 bolivars. It has fallen steadily from above 330 bolivars since the end of September, following the announcement of a \$65m, one-for-six share subscription. Investors continued to offload Electricidad shares in the cash market, said traders, to take advantage of the share subscription which runs until

MARKETS IN PERSPECTIVE

Masked by a neutral performance in October, the turn from strength to weakness in the Japanese equity market accelerated last week with a fall of 3.2 per cent in local currency terms, according to the FT-Actuaries World Indices. However, Mr David Shaw, strategy director of the Legal & General Group, points out that among the big battalions Japan's weakness stretches back much further. "Since the beginning of 1990," he writes, "US equities have outperformed Japanese equities by about 260 per cent in local currency terms." L&G reckons that the Japanese stock market should be moving, finally, into a bull phase while the US equity market stagnates or retreats. The £30hn investment house has already made an asset switch in its international funds based on this forecast, following an examination of the economic fundamentals in both markets.

Frankfurt climbs on Ifo profits forecast

Bourses were mostly subdued as they waited for today's FOMC meeting in Washington and the rise in interest rates that it is expected to bring. urites Our Markets Staff.

FRANKFURT advanced on the firm dollar and a stable German bond market. The Dax index closed 10.94 higher on the session at 2,089.29, and improved further in Ibis trading to end the post bourse at 2,091.04. Turnover fell from DM5bn to DM4.4bn.

Equities were encouraged by the Ifo economic research institute forecast that profits in west German industry could jump by 150 per cent to a total of around DM50bn in 1994.

Financials were strong on the hope that the Federal Reserve may help stabilise global interest rates, and bond markets, with its decision today. Allianz recovered DM41 to DM2,416 on the session and Commerzbank by DM7 to

Elsewhere it was mostly a day for individual stockpicking. Schering, the pharmaceuticals group, gained DM9.70 at DM969, encouraged by a fullyear sales forecast of DM350m for its BetaSeron multiple sclerosis drug, rising by 50 per cent in 1995. The market had expected full-year sales of around DM300m.

THE EUROPEAN SERIES Open 10:30 11:00 12:00 13:00 14:00 15:00 Closs Hourly changes FT-SE Eurobrack 100 1348.62 1350.27 1349.11 1348.67 1347.78 1348.74 1347.50 1347.53 FT-SE Eurobrack 200 1405.17 1406.25 1402.88 1403.38 1403.15 1403.45 1403.19 1403.12

group, hit a new 1994 high of DM1,003, up DM26 on a big business deal with IBM of the US; Computer 2,000, which announced a "strategic alli-ance" leading to a majority stake in AmeriQuest Technologies of Irvine, California, rose DM20 to DM460.

MILAN was enlivened by a flurry of late buy orders after a session marking time ahead of the parliamentary confidence vote on a budget measure offering a tax amnesty on building work. The Comit index was 0.92 lower at 640.13 while the real-time Mibtel idex finished with a gain of 63 to 10.264.

Construction stocks turned in another strong performance on hopes of new contracts following the recent floods in the northwest of the country. Unicem rose L282 to L10,512 and Grassetto put on L88 to L1.816. Shares in electricity companies rose strongly on speculation that they will take a bigger share of Italy's power generation market following the privatisation of the electricity giant, Enel. Edison picked up L165 to L6.726 and Sondel was L55 ahead at L2.530. Banks continued to be driven

by takeover speculation. Rom-

agnolo fell L445 to L16,166 on

news that it had obtained approval to merge with Cassa di Risparmio di Bologna as a poison pill measure. PARIS, back from holiday. managed to combine one or two quite sharp individual gains with a lack of general

impetus as the country saw its

third cabinet minister since July resign under a cloud. The CAC-40 index fell 7.27 to 1,941.08 in turnover of FFr2.89bn. The most outstanding gain, FFr8.90, or 6.1 per cent to FFr154 in Thomson CSF, the big electronics group on the French privatisation list, came on the rumour that the consumer electronics divi-

sion might be floated off first,

TAIPEI turned back as

short-term investors and spec-

ulators took profits and

retreated to the sidelines in the

belief that the market would

stagnate in the two weeks

before next month's elections.

The weighted index ended 89.41

or 1.4 per cent down at 6,393.27

SYDNEY lost ground on expectations of higher US

interest rates, and the All Ordi-

naries index weakened 25.5 or

1.3 per cent to 1,926.5, its low-

est close since September 22,

WELLINGTON was on hold

ahead of the FOMC meeting.

in turnover of T\$26.9bn.

defence side of the business. Meanwhile, Eurotimnel rose FFr1.70 to FFr22.65 on a successful trip for the first train carrying fare-paying passen-

and separately before the

gers on the new Eurostar express service. ZURICH edged lower after a firm, dollar driven opening. The SMI index fell 6.9 to 2,590.9. Ciba fell SFr21 to

SFr741 amid rumours,

prompted by a press report,

that it was to buy a 49 per cent stake in Chiron, the US drugs group. Ciba declined comment. Roche certificates fell SFr30 to SFr5.780 on news that Mr Peter Simon, head of the pharmaceutical division, was to leave the group at the end of the year. Holderbank, the cement producer, picked up SFr20 to

SFr1,035 after telling the autumn news conference that it had no plans to raise fresh capital in the near future and that its North American branch was set to make substantial profits for the first time in several years.

AMSTERDAM's international stocks were supported by the firm dollar and the AEX index picked up 1.23 to 408.92. Aegon closed up F11.20 at FI 107.40 on its better-than-expected nine months results and improved forecast; other financials finished narrowly mixed.

ASIA PACIFIC Today's FOMC meeting restrains region

Tokyo

The Nikkel 225 average closed marginally softer after arbitrage buying offset earlier selling by overseas and individual investors, writes Emiko Terazono in Tokyo.

The index lost 22.91 at 19,261.45 after a day's high of 19.298.96 and low of 19,115.72. Arbitrage unwinding coupled with profit-taking by foreigners and retail investors depressed the index, but corporate and arbitrage buying helped share prices recoup losses later.

Volume totalled 231m shares against 290m. The Topix index of all first section stocks gained 0.15 at 1,517.82 and the Nikkei 300 put on 0.20 at 278.70, but falls led rises by 555 to 388, with 228 issues unchanged. In London the ISE/Nikkei 50 index was up 1.77 at 1,252.25.

Traders said investors were cautious ahead of today's US Federal Open Market Committee meeting, which is expected

Meanwhile, investors continued to focus on earnings announcements. Many analysts believed that most of this year's earnings growth had been discounted into share prices, as well as most of the profits rise for next year. However. Mr Jason James at James Capel said the profits growth for the whole economic cycle had yet to be factored into the

The rise in the dollar against the yen supported export-orien-tated electricals. The US currency moved up to the Y98 level for the first time since October 18. Mitsubishi Electric

Y1.160 and Pioneer Electronic Y20 to Y2,500.

Tokyo Securities, which announced a Y32bn extraordinary loss stemming from unauthorised derivatives trading, finished at an offered price of Y570, down from its Friday close of Y670. Nikko Securities, a leading shareholder in Tokyo, declined Y20 to Y1,000. Other leading brokers were mixed, with Nomura Securities unchanged at Y1,870 and Yamaichi Securities adding Y14 at

Mitsui Fudosan, a leading real estate developer, retreated Y20 to Y1.000 following poor interim earnings announced last week. The company posted a 50 per cent fall in first-half recurring profits. In contrast, Mitsubishi Estate, another property developer, moved up Y4 to Y702.

In Osaka, the OSE average rose 29.02 to 21,293.58 in volume of 114.5m shares.

Roundup

Today's Federal Open Market Committee meeting restrained a number of Pacific Rim markets, although others found domestic factors to take them

SEOUL saw broadly based advances in a technical rebound after last week's four consecutive declines, and the composite index rallied 12.34 to

A 28-times oversubscription of the state-owned Korea Telecom shares bolstered others in the sector. Korea Mobile hit its upper limit of Won12,000 at Won2,500 at Won126,500.
